The Sobotta Clinical Atlas of Human Anatomy is

tailored specifically to the needs of medical and health professional students. It utilizes a regional approach for learning human anatomy that integrates core concepts of anatomical structure and function with modern methods of diagnostic imaging, cross-sectional anatomy, illustrations of real world functions, clinically relevant surface anatomy and key examples of how anatomical knowledge informs clinical practice. The 'Clinical Remarks' and 'Structure/Function' sections provide important and easily identifiable practical examples, which reinforce clinical application of anatomical knowledge. Moreover, all anatomical images are accompanied by descriptive text and summary tables which serve to highlight the key concepts associated with each specific image. Key features of the atlas include: More than 1850 anatomical, radiological, cross-sectional and functional images with clinically relevant labels give you a solid grounding

in human anatomy Descriptive text provides you with additional information for all images Summary tables allow you to organize valuable key concepts The regional approach to anatomy enables you to place functional, clinical and cross-sectional images in context 'Clinical Remarks' and 'Structure/Function' vignettes give you a head-start in learning anatomy in a clinically relevant manner Surface anatomy illustrations equip you with valuable knowledge for your first physical examinations The perfect study tool for courses in medicine – as well as a range of other courses, including dentistry, pharmacy, nursing, kinesiology or the movement sciences and physician assistants A unique PIN code provides you with bonus access to a complete digital copy of your atlas

The skin is the largest human organ system. Loss of skin integrity due to injury or illness results in a substantial physiologic imbalance and ultimately in severe disability or death. From burn victims to surgical scars and plastic surgery, the therapies resulting from skin tissue engineering and regenerative medicine are important to a broad spectrum of patients. *Skin Tissue Engineering and Regenerative Medicine* provides a translational link for biomedical researchers across fields to understand the interdisciplinary approaches which expanded available therapies for patients and additional research collaboration. This work expands on the primary literature on the state of the art of cell therapies and biomaterials to review the most widely used surgical therapies for the specific clinical scenarios. Explores cellular and molecular

processes of wound healing, scar formation, and dermal repair
Includes examples of animal models for wound healing and translation to the clinical world
Presents the current state of, and clinical opportunities for, extracellular matrices, natural biomaterials, synthetic biomaterials, biologic skin substitutes, and adult and fetal stem and skin cells for skin regenerative therapies and wound management
Discusses new innovative approaches for wound healing including skin bioprinting and directed cellular therapies
