This book explains the concept of data centers, including data collection, public parking systems, smart metering, and sanitizer dispensers. Electric urban transport systems and effective electric distribution in smart cities are discussed as well. The extensive role of power electronics in smart building applications, such as electric vehicles, rooftop terracing, and renewable energy integration, is included. Case studies on automation in smart homes and commercial and official buildings are elaborated. This book describes the complete implication of smart buildings via industrial, commercial, and community platforms. FEATURES Systematically defines energy-efficient buildings employing power consumption optimization techniques with the inclusion of renewable energy sources Covers data centers and cybersecurity with excellent data storage features for smart buildings Includes systematic and detailed strategies for building air-conditioning and lighting Details smart building security propulsion This book is aimed at graduate students, researchers, and professionals in building systems engineering, architectural engineering, and electrical engineering.

Industrial IoT Application Architectures and Use Cases I. C. Robledo

This book gathers selected papers presented at the 4th International Conference on Wireless Communications and Applications (ICWCA 2020), held at Hainan University, China. The second volume will involve research works aimed at the contemporary applications: emerging wireless/mobile applications, context and location-aware wireless services; wireless telemedicine and e-health services; intelligent transportation systems; RFID

technology and application; cognitive radio and sensor-based applications; content distribution in wireless home environment and many others.

Internet of Things (IoT) products and cyber-physical systems (CPS) are being utilized in almost every discipline and there continues to be significant increases in spending on design, development, and deployment of IoT applications and analytics within every domain, from our homes, schools, government, and industry. This practical text provides an introduction to IoT that can be understood by every engineering discipline and discusses detailed applications of IoT. Developed to help engineers navigate this increasingly important and cross-disciplinary topic, this work: Offers research-based examples and case studies to facilitate the understanding of each IoT primitive Highlights IoT's connection to blockchain Provides and understanding of benefits and challenges of IoT and its importance to a variety of engineering disciplines Written to be accessible to non-experts in the subject, What Every Engineer Should Know About the Internet of Things communicates the importance of this technology and how it can support and challenge all interrelated actors as well as all involved assets across many domains.

WHAT EVERY ENGINEER SHOULD KNOW ABOUT THE INTERNET OF THINGS

I. C. Robledo

This thesis presents a conceptual framework for user interface adaptation, joining dimensions that compose the variety of contexts of use through users, platforms, and environments, and the variety of aspects of an interactive system, including contents, presentation and navigation. This framework is named TriPlet.

Great Quotes that Inspire, Motivate, and Lift You Up! The quotes in this book will help you to improve your life by focusing on 7 Key Thoughts – elaborated upon in the book, 7 Thoughts to Live Your Life By: A Guide to the Happy, Peaceful, & Meaningful Life. These 7 Thoughts encourage you to focus on what you can control, the positive, what you can do, what you have, the present moment, what you need, and what you can give. This is the key to finding happiness, peace, and meaning in your life. Thus, the quotes in this book are meant to help you master the 7 Thoughts and to help you live your best life. 365 Quotes to Live Your Life By will be more focused than other quote books, allowing you to keep your mind on what is most important, and helping you to produce real and long-lasting positive changes in your life. Internationally bestselling author I. C. Robledo has used the 365 Quotes and the 7 Thoughts they are based on to empower and transform his life, to keep focused on what truly matters, and to make sure he is always making progress. The 365 Quotes support the 7 Thoughts and serve as his daily inspirational dose to make the best of every day. As he believes these quotes have great potential to help us all, he is now sharing them with everyone that he possibly can. The 365 Quotes to Live Your Life By will help you to: - Be inspired to improve yourself - Attract positivity - Find happiness & enjoy life - Pursue your purpose - Achieve success - Boost your self-esteem - Make your dreams come true - Help friends and family to improve their lives This collection of Great Quotes comes from a diverse range of Great People – men and women from the East to the West, from ancient to modern times, from artists to philosophers to scientists to entrepreneurs and more. Some notable people quoted include: Elon Musk, Mahatma Gandhi, Albert Einstein, Martin Luther King, Jr., Nelson Mandela, Frida Kahlo, Dalai Lama XIV, Paulo Coelho, Marie Curie, Anne Frank, Oprah Winfrey, Bill Gates, Confucius, Rumi, & Mother Teresa. This book constitutes the proceedings of the 20th International Conference on Computer Information Systems and Industrial Management Applications, CISIM 2021, held in Elk, Poland, September 24–26, 2021. The 38 papers presented together with 1 invited speech and 3 abstracts of keynotes were carefully reviewed and selected from 69 submissions. The main topics covered by the chapters in this book are mobile and pervasive computing, machine learning, high performance computing, image processing, industrial management. Additionally, the reader will find interesting papers on computer information systems, biometrics, security systems, and sensor network service. The contributions are organized in the following topical sections: biometrics and pattern recognition applications; computer information systems and security; industrial management and other applications; machine learning and artificial neural networks; modelling and optimization, and others. Chapter 24 "A first step towards automated species recognition from camera trap images of mammals using AI in a European temperate forest" is published open access under a CC BY license (Creative Commons Attribution 4.0 International License).

Come up with 10x More Ideas AND Get Rid of Your Mental Blocks Many of us want to be creative, but where are the ideas supposed to come from? You probably already know that simply wanting to get ideas isn't enough to make them magically appear. Instead of getting frustrated and giving up, there is an easier way. Now, it will be a realistic goal to come up with a hundred or more ideas in a day. You can do this regardless of your profession or background, and with virtually any topic. Internationally bestselling author I. C. Robledo has developed and tested 16 "idea hacks". You can use them to come up with many more creative ideas, and in much less time than you ever have. The more you use the hacks, the more you will tend to come up with better and better ideas as well. Inside, you will discover: - Why even your worst ideas are MUCH more valuable than you think they are - How William Kamkwamba, a boy who came from nothing, was able to build a windmill - Why the convenience of looking up answers too quickly can hurt your creativity - The #1 Habit of the most creative people (Hint: You've been doing it since you were One) - Why Neil Gaiman (sci-fi & fantasy author) purposely chooses to get bored, to get creative - BONUS: 101 Creative Exercises to Try Get a head start on coming up with your next bright idea with Idea Hacks. Idea Hacks will help you to think creatively, maximize your creative potential, master idea generation, be more innovative and

produce tons of brilliant ideas all on your own. It will help you to put an end to mental, creative, and writer's blocks that agonize and slow us down. We all have an inner creativity that is dying to get out, and when you learn how idea hacking works with the tips, tricks, and tools herein, nothing can stop you. There is no true limit to what you can make, design, build, or invent just with your own mind. You could even create or found your own business or company. The world can't wait to see your creation! This book is ideal for high school and college students, gifted and talented students, standardized test takers, teachers, educators, adult learners, independent learners and self-starters, school administrators, managers and leaders, and parents. It's also great for CEOs, MBA students, and business executives that lead creative companies. Similar authors you may have enjoyed include Sean Patrick, Daniel Coyle, Mihaly Csikszentmihalyi, Malcolm Gladwell, Steven Pressfield, Walter Isaacson, Michael Michalko, Ed Catmull, David McRaney, Tony Buzan, Barbara Oakley, Joshua Foer, Sanjay Gupta, Harry Lorayne, Edward de Bono, Joseph Murphy, John C. A state-of-the-art guide to middleware technologies, and their pivotal role in communications networks. Middleware is about integration and interoperability of applications and services running on heterogeneous computing and communications devices. The services it provides - including identification, authentication, authorization, soft-switching, certification and security - are used in a vast range of global appliances and systems, from smart cards and wireless devices to mobile services and e-Commerce. Qusay H. Mahmoud has created an invaluable reference tool that explores the origins and current uses of middleware (highlighting the importance of such technologies as CORBA, J2EE and JMS) and has thus compiled the roadmap to future research in this area. Middleware for Communications: discusses the emerging fields of Peer-to-Peer (P2P) and grid middleware detailing middleware platforms such as JXTA and the Globus middleware toolkit. shows how Middleware will play a significant role in mobile computing. presents a Platform Supporting Mobile Applications (PLASMA) - a middleware platform that consists of components for location, event, and profile handling of Location-Based Services. introduces middleware security focusing on the appropriate aspects of CORBA, J2EE, and .NET and demonstrates how to realize complex security capabilities such as role-based access control (RBAC) and mandatory access control (MAC). discusses how Quality of Service (QoS) component middleware can be combined with Model Driven Architecture (MDA) technologies to rapidly develop, generate, assemble and deploy flexible communications applications. This incomparable overview of middleware for communications is suitable for graduate students and researchers in communications and computing departments. It is also an authoritative guide for engineers and developers working on distributed systems, mobile computing and networked appliances.

This holistic book is an invaluable reference for addressing various practical challenges in architecting and engineering Intelligent IoT and eHealth solutions for industry practitioners, academic and researchers, as well as for engineers involved in product development. The first part provides a comprehensive guide to fundamentals, applications, challenges, technical and economic benefits, and promises of the Internet of Things using examples of real-world applications. It also addresses all important aspects of designing and engineering cutting-edge IoT solutions using a cross-layer approach from device to fog, and cloud covering standards, protocols, design principles, reference architectures, as well as all the underlying technologies, pillars, and components such as embedded systems, network, cloud computing, data storage, data processing, big data analytics, machine learning, distributed ledger technologies, and security. In addition, it discusses the effects of Intelligent IoT, which are reflected in new business models and digital transformation. The second part provides an insightful guide to the design and deployment of IoT solutions for smart healthcare as one of the most important applications of IoT. Therefore, the second part targets smart healthcare-wearable sensors, body area sensors, advanced pervasive healthcare systems, and big data analytics that are aimed at providing connected health interventions to individuals for healthier lifestyles.

This book provides comprehensive coverage of the latest advances and trends in information technology, science and engineering. Specifically, it addresses a number of broad themes, including multi-modal informatics, data mining, agent-based and multi-agent systems for health and education informatics, which inspire the development of intelligent information technologies. The contributions cover a wide range of topics such as AI applications and innovations in health and education informatics; data and knowledge management; multi-modal application management; and web/social media mining for multi-modal informatics. Outlining promising future research directions, the book is a valuable resource for students, researchers and professionals, and a useful reference guide for newcomers to the field. This book is a compilation of the papers presented in the 2021 International Conference on Multi-modal Information Analytics, held in Huhehaote, China, on April 23–24, 2021.

Simple, Practical, “Common Sense” Tips to Remember More & Forget Less You are here because your memory is not as good as you would like. Why might this be? Well, the internet has all the facts we need at our fingertips. Then cameras store our pictures, and smartphones contain the phone numbers of everyone we know. With so much information being recorded for us, the brain has little that it actually needs to remember. This may be good for productivity, but is bad for our memories. The problem is when we apply our memories less and less, our ability to remember can also get worse and worse.... The solution here is simple. We must practice and exercise our memories. Thankfully, in Practical Memory you will discover simple systems and exercises anyone can use to improve their memory. This way, you can see progress immediately, without needing to spend precious time learning difficult techniques (as with many other memory books). Internationally bestselling author I. C. Robledo has examined “ordinary” people with powerful memories. Studying such people is useful because they tend to use simple, practical “common sense” systems that we could all benefit from. Now, those tips are all compiled here into one convenient resource. Inside, you will discover: - How to recall even the most difficult memories (e.g., on the tip of your tongue) - Why intending or planning to remember is a key step to building memories - How to stop forgetting your purse/wallet, phone, camera, etc. - Why too much routine can be bad for your ability to remember - How to remember where you parked the car - Special tips for how to remember new locations when traveling (and stop getting lost) Start building a more powerful memory today with Practical Memory. This extensively revised textbook describes and defines the US healthcare delivery system, its many systemic challenges and the prior efforts to develop and deploy informatics tools to help overcome these problems. Now that electronic health record systems are widely deployed, the HL7 Fast Healthcare Interoperability standard is being rapidly accepted as the means to access and share the data stored in those systems and analytics is

increasing being used to gain new knowledge from that aggregated clinical data, this book goes on to discuss health informatics from an historical perspective, its current state and likely future state. It then turns to some of the important and evolving areas of informatics including electronic health records, clinical decision support, population and public health, mHealth and analytics. Numerous use cases and case studies are employed in all of these discussions to help readers connect the technologies to real world challenges. Health Informatics on FHIR: How HL7's API is Transforming Healthcare is for introductory health informatics courses for health sciences students (e.g., doctors, nurses, PhDs), the current health informatics community, computer science and IT professionals interested in learning about the field and practicing healthcare providers. Though this textbook covers an important new technology, it is accessible to non-technical readers including healthcare providers, their patients or anyone interested in the use of healthcare data for improved care, public/population health or research.

Purpose of the Book This book presents an approach to improve the standard object-oriented programming model. The proposal is aimed at supporting a larger range of incremental behavior variations and thus promises to be more effective in mastering the complexity of today's software. The ability of dealing with the evolutionary nature of software is one of main merits of object-oriented data abstraction and inheritance. Object-orientation allows to organize software in a structured way by separating the description of different kinds of an abstract data type into different classes and loosely connecting them by the inheritance hierarchy. Due to this separation, the software becomes free of conditional logics previously needed for distinguishing between different kinds of abstractions and can thus more easily be incrementally extended to support new kinds of abstractions. In other words, classes and inheritance are means to properly model variations of behavior related to the existence of different kinds of an abstract data type. The support for extensibility and reuse with respect to such kind-specific behavior variations is among the main reasons for the increasing popularity of object-oriented programming in the last two decades. However, this popularity does not prevent us from questioning the real effectiveness of current object-oriented techniques in supporting incremental variations. In fact, this popularity makes a critical investigation of the variations that can actually be performed incrementally even more important.
