 "What the Communist Manifesto is to the capitalist world, Annihilation of Caste is to India." —Anand Teltumbde, author of The Persistence of Caste B.R. Ambedkar's Annihilation of Caste is one of the most important, yet neglected, works of political writing from India. Written in 1936, it is an audacious denunciation of Hinduism and its caste system. Ambedkar – a figure like W.E.B. Du Bois – offers a scholarly critique of Hindu scriptures, scriptures that sanction a rigidly hierarchical and iniquitous social system. The world's best-known Hindu, Mahatma Gandhi, responded publicly to the provocation. The hatchet was never buried. Arundhati Roy introduces this extensively annotated edition of Annihilation of Caste in "The Doctor and the Saint," examining the persistence of caste in modern India, and how the conflict between Ambedkar and Gandhi continues to resonate. Roy takes us to the beginning of Gandhi's political career in South Africa, where his views on race, caste and imperialism were shaped. She tracks Ambedkar's emergence as a major political figure in the national movement, and shows how his scholarship and intelligence illuminated a political struggle beset by sectarianism and obscurantism. Roy breathes new life into Ambedkar's anti-caste utopia, and says that without a Dalit revolution, India will continue to be hobbled by systemic inequality.

 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

 This book presents peer-reviewed contributions on smart universities by various international research, design and development teams. Smart university is an emerging and rapidly evolving area that creatively integrates innovative concepts; smart software and hardware systems; smart classrooms with state-of-the-art technologies and technical platforms; smart pedagogy based on modern teaching and learning strategies; smart learning and academic analytics; as well as various branches of computer science and computer engineering. The contributions are grouped into several parts: Part 1—Smart Universities: Literature Review and Creative Analysis, Part 2—Smart Universities: Concepts, Systems and Technologies, Part 3—Smart Education: Approaches and Best Practices, and Part 4—Smart Universities: Smart Long Life Learning. The book is a valuable source of research data and findings, design and development outcomes, and best practices for faculty, scholars, Ph.D students, administrators, practitioners and anyone interested in the rapidly growing areas of smart university and smart education.

 This book provides dental professionals with a clear understanding of current clinical and scientific knowledge on the various aspects of pulp treatment for both primary and young permanent teeth. Diagnostic parameters are clearly presented, along with step-by-step descriptions of clinical procedures, including indirect and direct pulp treatments, pulpotomy, and pulpectomy. The rationale for the materials used in each technique and their individual merits and disadvantages are examined in detail. In the case of pulpotomy, all the materials used since the introduction of this treatment modality are discussed (e.g., formocresol, glutaraldehyde, ferric sulfate, and MTA) and the roles of sodium hypochlorite, electrofulguration, and laser therapy are elucidated. Special attention is devoted to pulpectomy and root canal treatment, with consideration of debriding and obturation techniques, rinsing solutions, and root-filling pastes. A further individual chapter is dedicated to

restorations of teeth treated with the different types of pulp therapy. The various conservative treatment modalities are also presented, including specific treatments for immature nonvital permanent teeth. The concluding chapter looks to the future and the potential value of stem cells in pulp therapy.

When life presents problems, all a heroine really wants is an answer key to fix them. Shannon Waller lives a paycheck-to-paycheck existence in far north Montana. A missing husband. Not even a pet. Alone. Suddenly life hands her the kind of money she only dreams of—an amount that starts with a B. A move to Ithaca, New York and into a home she inherits plus new friends—what more can she ask for? Private investigator Michael Silver is determined to find out who might want to kill Shannon. While his life seems safe, hers is one 'accident' after another, each hurting her worse. When a bullet barely misses Shannon, she and Michael have to discover who, what and why she's a target for murder. And do it fast before the next attempt succeeds!

From a writer with long and high-level experience in the U.S. government, a startling and provocative assessment of America's global dominance. Maximalist puts the history of our foreign policy in an unexpected new light, while drawing fresh, compelling lessons for the present and future. When the United States has succeeded in the world, Stephen Sestanovich argues, it has done so not by staying the course but by having to change it—usually amid deep controversy and uncertainty. For decades, the United States has been a power like no other. Yet presidents and policy makers worry that they—and, even more, their predecessors—haven't gotten things right. Other nations, they say to themselves, contribute little to meeting common challenges. International institutions work badly. An effective foreign policy costs too much. Public support is shaky. Even the greatest successes often didn't feel that way at the time. Sestanovich explores the dramatic results of American global primacy built on these anxious foundations, recounting cycles of overcommitment and underperformance, highs of achievement and confidence followed by lows of doubt. We may think there was a time when America's international role reflected bipartisan unity, policy continuity, and a unique ability to work with others, but Maximalist tells a different story—one of divided administrations and divisive decision making, of clashes with friends and allies, of regular attempts to set a new direction. Doing too much has always been followed by doing too little, and vice versa. Maximalist unearths the backroom stories and personalities that bring American foreign policy to life. Who knew how hard Lyndon Johnson fought to stay out of the war in Vietnam—or how often Henry Kissinger ridiculed the idea of visiting China? Who remembers that George Bush Sr. found Ronald Reagan's diplomacy too passive—or that Bush Jr. considered Bill Clinton's too active? Leaders and scoundrels alike emerge from this retelling in sharper focus than ever before. Sestanovich finds lessons in the past that anticipate and clarify our chaotic present.

The adverse effects of climate change and climate variability have become some of the biggest

environmental and socio-economic challenges for society, and for food supply chain actors, in particular. Serving as a serious inhibitor to the attainment of food security, climate change poses a fundamental threat to the availability, accessibility, stability and utilization of nutritious food and quality drinking water. The threat of this global phenomenon is not only apparent from the difficulties faced by all food supply chain actors, but is also felt acutely by households dependent on semi-subsistence agriculture. As evidenced by numerous studies conducted by the academic community, governmental and non-governmental organisations, climate change and climate variability will have disastrous effects on entire food supply chains across the world. This edited volume looks to address: How vulnerable are food supply chain actors to climate change and climatic variability? What adaptation strategies are they adopting? How is the resilience of food supply chains being supported? Are they being financed and/or supported by international organizations to cope with climate change? And what governmental support are they receiving to help cope with climate change? This book is an essential resource for students, lecturers, researchers, agribusinesses, marketing firms, agricultural institutions, climate change adaptation institutions, policymakers and many others with an interest in agricultural development and the global food industry.

In the early nineteenth century China remained almost untouched by British and European powers - but as new technology started to change this balance, foreigners gathered like wolves around the weakening Qing Empire. Would the Chinese suffer the fate of much of the rest of the world, carved into pieces by Europeans? Or could they adapt rapidly enough to maintain their independence? This important and compelling book explains the roots of China's complex relationship with the West by illuminating a dramatic, colourful and sometimes shocking period of the country's history.

China's economic growth has transformed the country from one of the poorest in the world to its second largest economy. Understanding the drivers of growth remains elusive as the country is affected by both its transition from central planning and the challenges of a developing country. This book examines the main themes of growth, offering micro level evidence to shed light on the macro drivers of the economy. It also focuses on law and informal institutions of the economy to highlight the importance of entrepreneurship and the development of the private sector.
