Although the construct of comfort has been analysed, diagrammed in a two-dimensional content map, and operationalized as a holistic outcome, it has not been conceptualized within the context of a broader theory for the discipline of nursing.(PDF) A theory of holistic comfort for nursingThe Theory of Comfort was developed when Katharine Kolcaba conducted a concept analysis of comfort that examined literature from several disciplines, including nursing, medicine, psychology, psychiatry, ergonomics, and English. After the three forms of comfort and four contexts of holistic human experience

were introduced, a taxonomic structure was created to guide for the assessment, measurement, and evaluation of patient comfort.Kolcaba's Theory of Comfort - Nursing TheoryHolistic comfort is defined as the immediate experience of being strengthened through having the needs for relief, ease, and transcendence met in four contexts of experience... The theoretical structure of Kolcaba's comfort theory has real potential to direct the work and thinking of all healthcare ...Comfort Theory by Katharine Kolcaba - Current NursingThe Theory of Comfort contains three parts (assertions) to be tested separately or as a whole. Part I states that comforting interventions, when effective, result in increased comfort for recipients (patients and families), compared to a pre-intervention baseline.Theory of Comfort | Nurse KeyKolcaba's theory of holistic comfort was first developed in the nursing literature in 1994 with the theorist's seminal work examining holistic comfort as a concept for nursing practice. According to Kolcaba comfort has been conceptualized and developed as a holistic outcome; however up until her work it had not been developed as a broader theory for nursing practice (Kolcaba, 1994).Sample: Kolcaba's Theory of ComfortThe Theory of Comfort is widely used as an organizing framework for Magnet application and recertification of Magnet Status. Nurses often choose this framework themselves because it describes what they want to do for patients and families, and what patients want from nurses during their hospitalization.33. Theory of comfort | Nurse KeyHuman beings have holistic responses to complex stimuli.

Comfort is a holistic outcome of effective nursing care. Human beings have a need for comfort and will seek comfort wherever possible. Nurses are in a position to identify the comfort needs of their patients, design comfort measures, and assess outcomes to support enhanced comfort. *Comfort Care in Nursing: The Concepts* The theory of comfort also offers a way to reconceptualize nurse productivity. Whether theories are grand or mid range (MR), they organize disciplinary thinking and influence practice and research. By definition, grand theories are abstract, complicated, and removed from practice. *Evolution of the Mid Range Theory of Comfort for Outcomes ...* Assessing patients for their level of comfort utilizing a positive, holistic manner is important for measuring effectiveness of comforting strategies. *Comfort Theory (Kolcaba, 2003)*, with its inherent emphasis on physical, psychospiritual, sociocultural, and environmental aspects of comfort, will contribute to a proactive, well diverse and articulated, and multifaceted approach to care. *Comfort Care in Nursing: Comfort Theory and Nursing Practice* The nursing outcome of holistic comfort encompasses physical, psychospiritual, social, and environmental aspects of human nature. The primary purpose of this study was to test four propositions about the nature of comfort: (a) Comfort has equal proportions of state and trait characteristics; (b) comfort is sensitive to changes over time; *Empirical Evidence for the Nature of Holistic Comfort ...* Holistic comfort focuses on treating the child's whole procedural experience and includes more than simply reducing pain. In this literature review, 33 intervention studies were examined. These studies focused on evaluating comfort effects from nursing interventions on pain, anxiety, fear, and distress. *Holistic Comfort Interventions for Pediatric Nursing ...* The theoretical work presented here utilizes an intra-actional perspective to develop a theory of comfort as a positive outcome of nursing care. A model of human press is the framework within which comfort is related to (a) interventions that enhance the state of comfort and (b) desirable subsequent outcomes of nursing care. *A theory of holistic comfort for nursing - Kolcaba - 1994 ...* Kolcaba developed her comfort theory after conducting a concept analysis of comfort that examined literature from medicine, psychology, nursing, psychiatry, English and ergonomics. This analysis "confirmed that comfort is a positive concept and is Dr. Katharine Kolcaba, RN This book places comfort at the forefront of nursing care, by presenting a carefully researched theory of comfort that nurses can use as a framework for practice. Engagingly written, the book combines a first-person account of the development of the theory with supporting research, and practical information for its application. *Comfort Theory and Practice: A Vision for Holistic Health ...* The appendix includes comfort care questionnaires that can be used with patients in many settings, and a comfort scale that can be used with patients for a quick assessment of comfort. Clinicians, researchers, educators, and students will find this holistic approach helpful in setting priorities and parameters for patient care. *Comfort Theory and Practice: A Vision for Holistic Health ...* The theoretical work presented here utilizes an intra-actional perspective to develop a theory of comfort as a positive outcome of nursing care. A model of human press is the framework within which comfort is related to (a) interventions that enhance the state of comfort and (b) desirable subsequent outcomes of nursing care.

A theory of holistic comfort for nursing. Although the construct of comfort has been analysed, diagrammed in a two-dimensional content map, and operationalized as a holistic outcome, it has not been conceptualized within the context of a broader theory for the discipline of nursing.

A theory of holistic comfort for nursing.

The theoretical work presented here utilizes an intra-actional perspective to develop a theory of comfort as a positive outcome of nursing care. A model of human press is the framework within which comfort is related to (a) interventions that enhance the state of comfort and (b) desirable subsequent outcomes of nursing care.

COMFORT CARE IN NURSING: THE CONCEPTS

The Theory of Comfort is widely used as an organizing framework for Magnet application and recertification of Magnet Status.
