In this book, Sean Safford compares the recent history of Allentown, Pennsylvania, with that of Youngstown, Ohio. Allentown has seen a noticeable rebound over the course of the past twenty years. Facing a collapse of its steel-making firms, its economy has reinvented itself by transforming existing companies, building an entrepreneurial sector, and attracting inward investment. Youngstown was similar to Allentown in its industrial history, the composition of its labor force, and other important variables, and yet instead of adapting in the face of acute economic crisis, it fell into a mean race to the bottom. Challenging various theoretical perspectives on regional socioeconomic change, *Why the Garden Club Couldn't Save Youngstown* argues that the structure of social networks among the cities' economic, political, and civic leaders account for the divergent trajectories of post-industrial regions. It offers a probing historical explanation for the decline, fall, and unlikely rejuvenation of the Rust Belt. Emphasizing the power of social networks to shape action, determine access to and control over information and resources, define the contexts in which problems are viewed, and enable collective action in the face of externally generated crises, this book points toward present-day policy prescriptions for the ongoing plight of mature industrial regions in the U.S. and abroad.

The global energy scene is in a state of flux. Large-scale shifts include: the rapid deployment and steep declines in the costs of major renewable energy technologies; the growing importance of electricity in energy use across the globe; profound changes in China's economy and energy policy, moving consumption away from coal; and the continued surge in shale gas and tight oil production in the United States. These changes provide the backdrop for the *World Energy Outlook-2017*, which includes a full update of energy demand and supply projections to 2040 based on different scenarios. The projections are accompanied by detailed analyses of their impact on energy industries and investment, as well as implications for energy security and the environment. The report this year includes a focus on China, which examines how China's choices could reshape the global outlook for all fuels and technologies. A second focus, on natural gas, explores how the rise of shale gas and LNG are changing the global gas market as well as the opportunities and risks for gas in the transition to a cleaner energy system. Finally, the *WEO-2017* introduces a major new scenario -the Sustainable Development Scenario -that outlines an integrated approach to achieving internationally agreed objectives on climate change, air quality and universal access to modern energy.

The Transformation of the Rust Belt Penguin UK

Questioning the assumption that education is the 'great social equalizer', this book takes a comparative approach to the social origin-education-destination triangle by examining advantage in 14 different countries, including case studies from Europe, Israel, the USA, Russia and Japan. Contributions from leading experts

examine the relation between family background, education and occupational achievement over time and across educational levels, focusing on the relationship between individuals' social origins and their income and occupational outcomes. Providing new theoretical insights, this book eloquently analyzes a variety of barriers to social mobility. Using concepts of compensatory and boosting advantage to explain the intergenerational transmission of social inequality, it refutes the notion of contemporary societies as education-based and meritocratic, showing that in most of the countries studied there is no sign of decreasing intergenerational association, despite the expansion of education. With its multitude of pertinent case studies, *Education, Occupation and Social Origin* will be of interest to academics and students of social policy as well as those interested in social inequalities and their evolution over time. It will also be a useful reference for governmental policymakers in the wake of the current economic crisis.
