In this second English-language edition of one of his most notable works, Miguel

León-Portilla explores the Maya Indians’ remarkable concepts of time. At the book’s first appearance Evon Z. Vogt, Curator of Middle American Ethnology in Harvard University, predicted that it would become “a classic in anthropology,” a prediction borne out by the continuing critical attention given to it by leading scholars. Like no other people in history, the ancient Maya were obsessed by the study of time. Their sages framed its cycles with tireless exactitude. Yet their preoccupation with time was not limited to calendrics; it was a central trait in their evolving culture. In this absorbing work León-Portilla probes the question, What did time really mean for the ancient Maya in terms of their mythology, religious thought, worldview, and everyday life? In his analysis of key Maya texts and computations, he reveals one of the most elaborate attempts of the human mind to penetrate the secrets of existence.

*The Mayan Codex* Macmillan

The Maya forged one of the greatest societies in the history of the ancient Americas and in all of human history. Long before contact with Europeans, Maya communities built spectacular cities with large, well-fed large populations. They mastered the visual arts, and developed a sophisticated writing system that recorded extraordinary knowledge in calendrics, mathematics, and astronomy. The Maya achieved all this without area-wide centralized control. There was never a single, unified Maya state or empire, but always numerous, evolving ethnic groups speaking dozens of distinct Mayan languages. The people we call "Maya" never thought of themselves as such; yet something definable, unique, and endlessly fascinating - what we call Maya culture - has clearly existed for millennia. So what was their self-identity and how did Maya civilization come to be "invented?" With the Maya historically subdivided and misunderstood in so many ways, the pursuit of what made them "the Maya" is all the more important. In this Very Short Introduction, Restall and Solari explore the themes of Maya identity, city-state

political culture, art and architecture, the Maya concept of the cosmos, and the Maya experience of contact with including invasion by outsiders. Despite its brevity, this book is unique for its treatment of all periods of Maya civilization, from its origins to the present.

An engaging study that reveals sacred teachings that the Mayan priesthood hid from Spanish conquistadores in Mexico in 1519. The author explores the scientific and spiritual principles underlying the ancient glyphs, numbers, and language of the Maya.

*The Eye of Heaven* Simon and Schuster  
Mayan daykeeper Hunbatz Men reveals the multi-calendar system of the Maya that guided the lives of his ancestors and how it can guide us today • The first book to reveal the secrets of the Mayan Pleiades calendar: the Tzek'eb • Explains how the Maya used their astronomical knowledge to guide their lives on Earth  
The Mayan Calendar has taken on special prominence with the imminent arrival of 2012, a date that many claim is the end of that calendar. However, as Mayan elder and daykeeper Hunbatz Men shows, the cosmological understanding of his ancestors was so sophisticated that they had not one, but many calendars, each

based on the cycles of different systems in the cosmos. In this book he reveals for the first time the Tzek'eb, or Pleiades, Calendar of 26,000 years, which charts the revolution of our solar system around Alcyone, the central star of the Pleiades system. He also discusses the K'uuk'ulcan Calendar of the 4 seasons of the solar year and the wheel of the K'altunes Calendar, which is composed of 13 cycles of 20 years each that form a calendar of 260 years. In traditional Mayan culture the computation of time was not determined by simple economic or social motives. The calendars served the higher purpose of synchronizing the lives of human beings and their societies to the great cosmic pulsation, to the rhythm of the annual seasons, and to the other cycles that dictate changes upon Earth. Mayan understanding of the cosmic cycles was so exact that this knowledge could be used to influence all stages of life--from planning when to conceive (parents could choose not only the sex of their child but its vocation and future destiny) to plotting out the course of the entire society. Pyramids played a crucial role in applying this wisdom because, as Hunbatz Men shows,

they were able to produce and transform energy in accordance with the cosmic cycles charted by the calendars. This book reveals for the first time the wisdom of the multi-calendar Mayan system and how it can help guide our modern world.

The recent interpretation of Maya hieroglyphs has given us the first written history of the New World as it existed before the European invasion. In this book, two of the first central figures in the massive effort to decode the glyphs, Linda Schele and David Freidel, make this history available in all its detail. *A Forest of Kings* is the story of Maya kingship, from the beginning of its institution and the first great pyramid builders two thousand years ago to the decline of Maya civilization and its destruction by the Spanish. Here the great historic rulers of pre-Columbian civilization come to life again with the decipherment of their writing. At its height, Maya civilization flourished under great kings like Shield-Jaguar, who ruled

for more than sixty years, expanding his kingdom and building some of the most impressive works of architecture in the ancient world. Long placed on a mist-shrouded pedestal as austere, peaceful stargazers, the Maya elites are now known to have been the rulers of populous, aggressive city-states. Hailed as "a Rosetta stone of Maya civilization" (Brian M. Fagan, author of *People of the Earth*), *A Forest of Kings* is "a must for interested readers," says Evon Vogt, professor of anthropology at Harvard University.
