Elsevier Health Sciences The EHRA Book of Interventional Electrophysiology is the second official textbook of European Heart Rhythm Association (EHRA). Using clinical cases

to encourage practical learning, this book assists electrophysiologists and device specialists in tackling both common and unusual situations that they may encounter during daily practice. Richly illustrated, and covering electrophysiological procedures for supra-ventricular and ventricular arrhythmias, the book enables specialists to deepen their understanding

of complex concepts and techniques. Tracings, covering supra-ventricular and ventricular arrhythmias, are presented with multiple-choice questions to allow readers to hone their skills for interpreting challenging cases and to prepare for the EHRA certification exam in electrophysiology. Cases include Orthodromic AVRT, PV Isolation, VT ablation, and Atypical left

atrial flutter to name a few. The EHRA Book of Interventional Electrophysiology is a wide-ranging, practical case-book, written by leading experts in the field and edited by members of the EHRA education committee: an essential companion for electrophysiologists and trainees alike.

practice of cardiac electrophysiology. The handbook provides the specialist in training with a thorough grounding procedures, and clinical findings for clinicians. It provides a review of the main kinds of arrhythmia with illustrations of typical ECG findings supported where appropriate by correlative imaging. It also details the principal diagnostic and therapeutic procedures

include implantation of pacemakers, resynchronization therapy, and ablation techniques. Key Features Provides concise, user friendly guide to the equipment, procedures and clinical findings with which EPs need to be familiar Delivers alternatives resource to the flagship titles available in this field - idea for those beginning training or seeking an update Presents

extensively updated material to enhance comprehension Includes new treatments and devices for electrophysiologists trained to perform interventional cardiac electrophysiology studies (EPS) as well as surgical device implantations

Elsevier Health Sciences Handbook of Cardiac Electrophysiology provides a comprehensive introductory-level guide to

invasive cardiac EP studies. Its focus is to enable the reader to understand and interpret the recording and stimulation techniques used during an EP study. The primary emphasis is on tachyarrhythmia diagnosis, but the book also includes bradycardias, the principles of catheter ablation and new mapping techniques. The main concepts are explained diagrammatically in a 4

colour format with clinical multichannel intracardiac recordings being used to illustrate the concepts discussed. The book provides sufficient practical information to enable the reader to plan an EP study and interpret the intracardiac recordings of most common tachycardias.

The world of echocardiography continues to be full of exciting new technological developments with an ultimate goal of better patient care. In this book, titled "Echocardiography in Heart Failure and Cardiac Electrophysiology", authors from various parts of the world contributed to the advancement of the field. We have included various chapters about the use

of echocardiography and modalities of imaging in various common clinical scenarios - ranging from evaluation of commonly ignored right ventricle, imaging in congestive heart failure, to echocardiographic evaluation of critically ill patients. We have also included topics describing the use of echocardiography in cardiac electrophysiology with

special interest to cardiac resynchronization therapy and atrial fibrillation ablation. These topics would be of great interest to the clinicians whether they are trainees, physicians, advanced care providers, or anyone involved in the patient care.

Cardiac Resynchronization Therapy: State of the Art, An Issue of Cardiac Electrophysiology Clinics, E-Book Springer

This extensively revised second edition

provides a practically applicable guide for the management of cardiac arrhythmia. This subject has continued to expand rapidly, and it is therefore critical to understand the basic principles of arrhythmia mechanisms in order to assist with diagnosis and the selection of an appropriate treatment strategy. Comprehensively revised chapters cover a variety of aspects of

cardiac electrophysiology in an easy-to-digest case-based format. For each case of arrhythmia, relevant illustrations, fluoroscopy images, ECGs and endocavity electrograms are used to describe the etiology, classification, clinical presentation, mechanisms, electrophysiology set up and relevant troubleshooting procedures. New topics covered include the application of

new antiarrhythmic drugs in tandem with ablation, techniques for the ablation of atrial fibrillation and electrophysiological assessments available for identifying instances of atrial tachycardia. Clinical Handbook of Cardiac Electrophysiology presents a comprehensive overview of cardiac electrophysiology, making it a valuable reference for practicing and trainee cardiac

electrophysiologists, cardiologists, family practitioners, allied professionals and nurses. Handbook of Cardiac Electrophysiology Cardiotext Publishing Debates and controversies about how to treat difficult problems or conditions abound in cardiac electrophysiology. This issue attempts to bring together a variety of controversial subjects and to present differing views on how to resolve these

questions so clinicians will have a handy guide to the most current thinking about these difficult subjects. Cardiac Electrophysiology Cardiotext Publishing This volume focuses on the practical aspects of clinical electrophysiology of cardiac arrhythmias in the young as practiced in the Department of Pediatric Cardiology at the University of Michigan. Cardiac arrhythmias in children are often

symptomatic as well as frightening to the child patient and parent. This volume is intended as a practical guide for the novice or seasoned physician presented with a child with a cardiac arrhythmia.
