From a debut author comes a story of finding oneself in a place all too familiar. After Dulcie Morrigan Jones's dad dies, her mom decides they need to find a new life in California. But Dulcie doesn't understand what's wrong with her old life back in Newbury, Connecticut. So she heads across country and back home in her father's red 1968 Chevy pickup truck. When she arrives, she meets Roxanne, a girl whose home life makes Dulcie see that her own situation may not be all that bad after all. And as the summer comes to an end, Dulcie realizes that maybe it's necessary to leave a place in order to come back and find out who you really are.

Summary A hands-on guide that will teach how to design and implement scalable, flexible, and open IoT solutions using web technologies. This book focuses on providing the right balance of theory, code samples, and practical examples to enable you to successfully connect all sorts of devices to the web and to expose their services and data over REST APIs. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology Because the Internet of Things is still new, there is no universal application protocol. Fortunately, the IoT can take advantage of the web, where IoT protocols connect applications thanks to universal and open APIs. About the Book Building the Web of Things is a guide to using cutting-edge web technologies to build the IoT. This step-by-step book teaches you how to use web protocols to connect real-world devices to the web, including the Semantic and Social Webs. Along the way you'll gain vital concepts as you follow instructions for making Web of Things devices. By the end, you'll have the practical skills you need to implement your own web-connected products and services. What's

This monograph presents a new, systematic treatment of the relation between classifying topoi and classifying spaces of topological categories. Using a new generalized geometric realization which applies to topoi, a weak homotopy equivalence is constructed between the classifying space and the classifying topos of any small (topological) category. Topos theory is then applied to give an answer to the question of what structures are classified by "classifying" spaces. The monograph should be accessible to anyone with basic knowledge of algebraic topology, sheaf theory, and a little topos theory.

Are you looking for a guide to learn the basics of a computer network? This book is for you! Before the advent of the wireless technology era, the existing communication technologies were primarily powered by wired technology. From the telephone to the fax machine, communication was not possible without a physical connection between the communication device and the source of the power of the device. For instance, there had to be a connection between a wired telephone and the dial board for communication to be possible. Just as with every other wired device, wireless communication has successfully displaced wired communication. The term wireless communication came into existence in the 19th century. Over the years, wireless communication technology has taken a new dimension. It ranks among the best mediums of information transmission from one device to other devices. This is not unconnected to the ease with which it allows users to communicate with others even if they are operating from a remote area. There are tons of devices that have been adapted for wireless communications. They include GPS, cordless phones, satellite television, Wi-Fi, and some other wireless computer parts. Recently, both the 3 and 4G networks have been included in the list alongside Bluetooth. This guide will cover the following topics: Wireless hardware and standard Subnetting Reminders and Tips Wireless Technologies Managing Routers and Switches Advanced Configurations IPv6 vs IPv4 The Internet's big arena Moving the Router Cabling the Network Subnetting Basics IPv6 Subnetting Scaling Networks... Media semiotics is a valuable method of focusing on the hidden meanings within media texts. This book offers students an in-depth guide to help them investigate and understand the media using semiotic theory. It assumes little previous knowledge of the field, avoiding jargon and explaining the issues step by step. The two basic features of the methods used are the historical study of media and their genre and the analysis of the meaning structures that such genres encode. Semiotic analysis is sometimes seen as complicated and difficult to understand; Marcel Danesi shows that on the contrary it can be readily understood and can greatly enrich students' understanding of media texts, from print media right through to the internet. **Conditioning, Spawning and Rearing of Fish with Emphasis on Marine Clownfish** Springer

This ground-breaking presentation of Neo-Hasidic philosophy gathers and analyzes the writings of its progenitors: five great twentieth-century European and American Jewish thinkers—Hillel Zeitlin, Martin Buber, Abraham Joshua Heschel, Shlomo Carlebach, and Zalman Schachter-Shalomi—along with a young Arthur Green.
