Although there are as many answers to the question of how organizations can gain competitive advantage in today's global economy as there are books and experts, one lesson seems very clear: traditional answers and resources are no longer sufficient. This seminal book offers not only an answer regarding how to gain competitive advantage through people, but also a brand new, untapped human resource--psychological capital, or simply PsyCap. Generated from both the positive psychology movement and the authors' pioneering work on positive organizational behavior, PsyCap goes beyond traditionally recognized human and social capital. But PsyCap is not a vague or unscientific concept: to be included in PsyCap, a given positive construct must be based on theory, research, and valid measurement, must be open to development, and must have measurable performance impact. The positive constructs that have been determined to best meet these PsyCap criteria, efficacy (confidence), hope, optimism, and resiliency, are covered in separate chapters in *Psychological Capital*. After exploring other potential positive constructs such as creativity, wisdom, well being, flow, humor, gratitude, forgiveness, emotional intelligence, spirituality, authenticity, and courage, the authors summarize the research demonstrating the performance impact of PsyCap. They go on to provide the PsyCap Questionnaire (PCQ) as a measurement tool, and the PsyCap Intervention (PCI) as a development aid. Utility analysis indicates that investing in the development of PsyCap as presented in this book can result in a very substantial return. In total, *Psychological Capital* provides theory, research, measurements, and methods of application for the new resource of psychological capital, a resource that can be developed and sustained for competitive advantage.

*An Introductory Text* Kecemasan Ibu Hamil Trimester III Dalam Menghadapi Persalinan Di Masa Pandemi Covid-19

In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. *Improving Palliative Care for Cancer* examines the barriers--scientific, policy, and social--that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.

#### **20 Common Problems in Women's Health Care** Oxford University Press, USA

This volume derived from original presentations given at a conference in Atlanta, Georgia, under the auspices of the Center for Child Well-Being. Scholars, practitioners, public health professionals, and principals in the child development community convened to address a science-based framework for elements of well-being and how the elements might be developed across the life course. Integrating physical, cognitive, and social-emotional domains, Well-Being is the first scientific book to consider well-being holistically. Focusing on a set of core strengths grouped within these three domains, the book also includes a fourth section on developmental strengths through adulthood that broadly examines a continuum of health and development, as well as transitions in well-being. This volume takes a developmental perspective across the life course, describing foundational strengths for well-being--the capacities that can be actively developed, supported, or learned. These foundational strengths--problem solving, emotional regulation, and physical safety--are the positive underpinnings of early child health and development, as well as ongoing well-being across the life course. Working together and blending their respective disciplinary perspectives and expertise, 53 experts in psychology, sociology, child development, and medicine have contributed to the book.

The Pregnancy Survival Manual John Wiley & Sons

The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. The MNH Counselling Handbook is chiefly designed to be used by groups of SAs with the help of a facilitator. It can also be used by individual SAs who can get together with colleagues for discussions and activities where needed. It relies on a self-directed learning approach, allowing SAs to work at their own pace, drawing on their past counselling experience. The way it is used will be determined by each country's context, and the SAs preference. The MNH Counselling Handbook is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labour; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have understood the key points before they progress to subsequent sessions.
