Business Process Management (BPM) has become one of the most widely used approaches for the design of modern organizational and information systems. The conscious treatment of business processes as significant corporate assets has facilitated substantial improvements in organizational performance but is also used to ensure the conformance of corporate activities. This Handbook presents in two volumes the contemporary body of knowledge as articulated by the world's leading BPM thought leaders. This first volume focuses on arriving at a sound definition of BPM approaches and examines BPM methods and process-aware information systems. As such, it provides guidance for the integration of BPM into corporate methodologies and information systems.

Each chapter has been contributed by leading international experts. Selected case studies complement their views and lead to a summary of BPM expertise that is unique in its coverage of the most critical success factors of BPM. The second edition of this handbook has been significantly revised and extended. Each chapter has been updated to reflect the most current developments. This includes in particular new technologies such as in-memory data and process management, social media and networks. A further focus of this revised and extended edition is on the actual deployment of the proposed theoretical concepts. This volume includes a number of entire new chapters from some of the world's leading experts in the domain of BPM.

The BPM Conference series has established itself as the premier forum for -

searchers in the area of business process management and process-aware information systems. It has a record of attracting contributions of innovative research of the highest quality related to all aspects of business process management, including theory, frameworks, methods, techniques, architectures, systems, and empirical findings. BPM 2010 was the 8th conference of the series. It took place September 14- 16, 2010 on the campus

of Stevens Institute of Technology in Hoboken, New Jersey, USA—with a great view of Manhattan, New York. This volume contains 21 contributed research papers that were selected from 151 submissions. The thorough reviewing process (each paper was reviewed by three to five Program Committee members followed in most cases by in-depth discussions) was extremely competitive with an acceptance rate of 14%. In addition to the contributed papers, these proceedings contain three short papers about the invited keynote talks. In conjunction with the main conference, nine international workshops took place the day before the conference. These workshops fostered the exchange of fresh ideas and experiences between active BPM

researchers, and stimulated discussions on new and emerging issues in line with the conference topics. The proceedings with the papers of all workshops will be published in a separate volume of Springer's Lecture Notes in Business Information Processing series. Beyond that, the conference also included a doctoral consortium, an industry program, reside chats, tutorials, panels, and demonstrations.

This IBM® Redbooks® publication provides information about security concerning an organization's business process management (BPM) program, about common security holes that often

occur in this field, and describes techniques for rectifying these holes. This book documents preferred practices and common security hardening exercises that you can use to achieve a reasonably well-secured BPM installation. Many of the practices described in this book apply equally to generic Java Platform and Enterprise Edition (J2EE) applications, as well as to BPM. However, it focuses on aspects that typically do not receive adequate consideration in actual practice. Also, it addresses equally the BPM Standard and BPM Advanced Editions, although there are topics inherent in BPM Advanced that we considered to be out of scope for this book. This book is not meant as a technical deep-dive into any one topic, technology, or philosophy. IBM offers a

variety of training and consulting services that can help you to understand and evaluate the implications of this book's topic in your own organization.

Businesses around the world are discovering the improvements possible through a focus on the key process steps contained in an end-to-end supply chain connecting multiple enterprises. Industry leading firms are bringing five to eight points of new profit to their bottom line, while the laggards have failed to generate any return on investment (ROI). This book will help the reader understand how process improvement can add value for firms of any size in any business, and show the way to track those savings to the profit and loss

statement. It will introduce a roadmap for achieving success by relating specific process improvements to specific savings and value creation. It begins with a guiding framework and a presentation of the underlying architecture, including the basic elements of optimizing the extended enterprise, applying business process management (BPM) tools and techniques, and bringing value to all constituents of the network enterprise, especially the end consumer. The result is the creation of a truly linked and optimized intelligent business network that delivers greater value than competitors.

CMA Part 1 Financial Planning Performance and Analytics 2022 [Study Book] Meghan Kiffer Press

This book is best suited to those business leaders who have a burning desire to win. It's a book with a compelling message about the resurgence of business process thinking for competitive advantage. In an easy-to-read format, the book outlines why and how thoughtful CEO's and leadership teams can manage enterprise business processes as the means to transform their good companies into great ones. Spanyi's book is a must read for business leaders searching for ways to manage the business in a more integrated manner by applying 21st century BPM techniques, thinking and technologies. Business process thinking is the prerequisite for executives to take advantage of powerful new BPM technologies. The book is, however, less

about tools, templates and technologies and more about the set of values, beliefs and business practices needed to navigate through challenging economic times. Indeed, that's why Spanyi says BPM is a team sport--Play it to Win! And to win, leaders must manage the cross-functional teams throughout the organization who must work collaboratively to create enduring value for customers and shareholders. Much of what has been written on BPM is mechanistic and technical. Several of the works are long and tough to digest, and the links to strategy, organization design, people issues and technology are lost in the details. In a fast-paced and engaging manner, Spanyi describes how BPM can provide a robust framework enabling an organization to

achieve strategic focus, organizational alignment and operating discipline. Spanyi proposes that organizations need to consciously work on transforming the mental models of the executive team from the traditional functional paradigm to a customer-driven model that is based on business process thinking. The book provides insight into why change initiatives like reengineering, continuous improvement and Six Sigma, when implemented piecemeal, are not nearly enough to achieve dominance in today's turbulent business environment. BPM is needed to provide the context for both change initiatives and the application of emerging technology, so that change programs can be deeply and fully integrated across the organization. The

book is written such that the initial reading can be done in less than the time it takes to fly from Dallas to Boston or from Toronto to Miami. A quick read can acquaint the reader with the essential concepts. Readers can then consume the book more carefully a second time, and combine its reading assignments to gain a more complete background and understanding of this vital subject (all the readings can be acquired through the book's Web site).

### **MAKE WORK MAKE SENSE**

Meghan Kiffer Press

We are entering an entirely new phase of BPM – the era of “BPM Everywhere” or BPME. BPME represents the strategy for leveraging, not simply surviving but fully exploiting the wave of disruption facing every business over the next 5 years and beyond. Without question, one of the single most disruptive events in the last decade was the introduction of the smartphone. Consider for a moment how great of an impact this has had on the relationship between businesses and their customers. Not even the emergence of the Web and Internet-

based “digital native” business models can compare with the level of intimacy now available with your customers. In the era of the Internet of Things where smart homes, appliances, cars, phones, virtually imaginable devices are all connected, BPM must, and will, be everywhere. As Peter Whibley discusses in “The Internet of Things Will Be Invisible,” by 2025 there are expected to be more than 26 billion or more connected devices. In the chapter “Digital Prescriptive Maintenance: Disrupting Manufacturing through IoT, Big Data, and Dynamic Case Management,” Dr. Setrag Khoshafian introduces the “4 Vs” of “thing” data, specifically “Volume, Velocity, Variety and Value.” From monitors and remote sensors, to appliances and vehicles, to

tens of billions of other “things,” connected devices are generating meaningful and informative data that would easily overwhelm any human being, but collectively they present critical context about processes and the state of operations. “Big Data” has never been so large, nor presented such an acute role within enterprises and the processes that drive them. BPME as well as traditional BPM methods can already be found at the center of this. Its role will grow exponentially. Emergent factors such as process mining (see chapter “Mining the Swarm” by Keith Swenson, et al.) will be critical for uncovering engagement patterns and the need for process management platforms to coordinate interaction and control of smart devices. It is intelligent BPM that is

expanding the window of what can be automated, by enabling adaptable automation. The mobile strategies in far too many organizations seem to be the building of apps that presume that customers will use their smartphones like mini laptops. This avoids the fact that we now have a level of intimacy with our customer we've never had before. As discussed in the chapter "BPM to Go – Supporting Business Processes in a Mobile and Sensing World," our customers are carrying around a device that offers a range of capabilities unlike any laptop. A smartphone produces volumes of meaningful data about our customers (think about the "4Vs") and is able to interact with that customer in ways that a laptop never can. The growing ubiquity of connectivity always

within reach combined with new services and capabilities such as mobile banking is a key part of driving constantly-changing expectations. Yet digital disruption is not limited to mobile devices, and is in fact disrupting everywhere BPM is otherwise found, and why BPM everywhere is becoming the new normal.

This book introduces students to business process management, an approach that aims to align the organization's business processes with the demands of the marketplace. Processes serve as a coordination mechanism, and the aim of business process management is to improve the organization's effectiveness and efficiency in adapting to change, and maintaining competitive advantage. In Business Process Management, Kumar argues for the value of looking at businesses as a collection of processes that cut across departments, and for breaking down functional silos. The book provides an overview of the basic

concepts in this field before moving on to more advanced topics such as process verification, flexible processes, process security and evaluation, resource assignment, and social networks. The book concludes with an examination of the future directions of the discipline. Blending a strong grounding in current research with a focus on concepts and tools, Business Process Management is an accessible textbook full of practical examples and cases that will appeal to upper level students.
