Abstract : Currently, one of the biggest challenges the world is facing is energy insufficiency. One of the contributors to energy consumption in United States are the idling semi-trailer trucks. In May 2001, President Bush issued The National Energy Policy in which he directed The Environmental Protection Agency (EPA) and Department of Transportation (DOT) to reduce the idling of trucks. This was done in order to reduce energy consumption by lowering fuel consumption and emissions coming out of semi-trailer trucks in the United States of America. This project deals with the efforts of installing an Auxiliary Power Unit (APU) as a device to reduce the idling on a Freightliner Argosy Auto Transport. A Yanmar YDG3700 series diesel generator set was mounted on the truck as an APU in order to reduce the fuel consumption and emissions of the truck. It was also used to power the 12V/120V accessories inside the truck's cabin, charge the truck's batteries and power the truck's block heater. In order to make the APU operation silent, a new exhaust system was designed and fabricated and mufflers were installed in it. Various engineering reviews were conducted and decisions were made to install the entire system on the truck. In order to validate the results, various thermal and noise tests were conducted on this system. A load test was conducted to observe the load bearing capacity of the APU. Based on its results, calculations were done to estimate the efficiency of the APU operation. Tests were conducted to observe the temperatures reached inside the systems and appropriate ventilation requirements were selected for safe operation of the system. Sound measurement tests were conducted to validate if the APU was actually an aid to the driver during rest times. The sound measurements were made in a real time simulated truck rest stop environment. Apart from the tests, parallels were drawn between the truck's idling engine and the APU for fuel consumption and CO2 emissions and conclusions were made on the saving in fuel consumption and emissions.

Kiwi truckies are the unsung heroes of New Zealand - the men and women who make great personal sacrifice and often risk their lives to keep our country running. The people who devote their life, in some way or another, to what is often a hard and lonely passion. Life on the Road gathers together their fascinating stories. It captures the humour, tragedy, action and extremes of the trucking world, by turns moving between the dramatic, light-hearted and surprising - including runaway trucks, skirmishes with the law, nostalgic tales of the early pioneers, love stories, and more than one practical joke. Whether you're a trucking die-hard or just love the wide open road and a cracking good yarn, Life on the Road is a gripping insight into the real lives of Kiwi truckies.

Hawker Siddeley's history can be traced back to 1912 and the formation of the Sopwith Aviation Company by Tom Sopwith which metamorphosed into Hawker Aircraft after World War One. In 1934-35, Gloster, Avro, Armstrong Siddeley, Armstrong Whitworth and others were taken over to create the Hawker Siddeley Group. The Group built some of the most important aircraft and missiles of the 1960s, 1970s and beyond; its best-known products included the Harrier, Buccaneer, Nimrod and Hawk warplanes, Sea Dart missile and HS748 airliner. Its collaborative projects included the European Airbus and various satellite programmes. Hawker Siddeley was subsumed into British Aerospace in 1977, but some of its products still remain in service to this day. This is their story. Illustrated with over 400 colour and black & white photographs, many of them previously unpublished. *Hearing Before the Subcommittee on Trade of the Committee on Ways and Means, U.S. House of Representatives, One Hundred Eighth Congress, First Session, June 10, 2003* Crowood

Jakou výbavu měla speciální série vozů Aston Martin, nazvaná Alfred Dunhill? Jak souvisí logo Maserati s fontánou z 16. století? Je slovo Aero spojeno jen s českou automobilkou, nebo najdeme vozy tohoto jména i v jiných částech světa? Co přesně jsou „daňové koně“? Vymysleli název Citroën Elysée Číňané? Jak ovlivnil vývoj automobilového průmyslu fakt, že zakladatelé značek Ferrari a Lamborghini spolu nevycházel? Ing. Jiří Fiala (publicista, automobilový historik a sběratel automobilové literatury) a doc. Petr Strossa (vědec, expert přes jazyky a dorozumívání s počítači) předkládají všem automobilovým fanatikům unikátní výkladový slovník jmen značek a jejich typů, který obsahuje hesla o přibližně 1600 značkách a více než 5000 typech a modelech. Čtenáři v knize najdou mimo jiné základní informace o výrobcích automobilů, jejich filozofii označování typů, používání interních kódů či recyklování názvů vozů. Dozvědí se, proč se jeden automobil prodával pod různými názvy, proč se některá jména nesměla používat nebo jakých dosáhly jednotlivé

vozy sportovních úspěchů. Vůbec poprvé je u nás pak publikován systém kódů sovětských vozidel a přehled čínských značek a výrobců. Zvláštní pozornost je věnována znakům (logům) všech důležitých značek, jejich vzniku a proměnám v čase. Celá tato speciální problematika je navíc zasazena do kontextu společenských a geopolitických událostí a okořeněná množstvím pozoruhodných historek a kuriozit souvisejících s auty, jejich jmény a výrobci.
