Sub-Saharan Africa is at a turning point. The barriers to economic growth seen in the 1980-2000 era are disappearing and new

optimism is spreading. However, difficult goals of eliminating poverty, achieving equity and overcoming environmental threats continue. This much-needed and insightful textbook has been written to help us understand this combination of emerging improvements and significant challenges. Opening with an analysis of the main theories relating to development in Sub-Saharan Africa, the book explores all the key issues, including: Human development; Rapid urbanization; Structural and gender

dimensions; Sustainable development and environmental issues; and Africa's role in the world economy. The authors use economic tools and concepts throughout, in a way that makes them accessible to students without an economics background. Readers are also aided by a wide range of case studies, on-the-ground examples and statistical information, which provide a detailed analysis of each topic. This text is also accompanied by an e-resource, featuring additional sources for students and

instructors. African Economic Development is a clear and comprehensive textbook suitable for courses on African economic development, development economics, African studies and development studies.

McGraw-Hill Europe

Countries everywhere are divided within into two distinct spatial realms: one urban, one rural. Classic models of development predict faster growth in the urban sector, causing rapid migration from rural areas to cities, lifting average incomes in both places. The situation in South Africa throws up an unconventional challenge. The country has symptoms of a spatial realm that is not not rural, not fully urban, lying somewhat in limbo. This is the realm of the country's townships and informal settlements (T&IS). In many ways, the townships and especially the informal settlements are similar to developing world slums, although never was a slum formed with as much central planning and purpose as were some of the larger South African townships. And yet, there is something distinct about the T&IS. For one thing, unlike most urban slums, most T&IS are geographically distant from urban economic centers. Exacerbated by the near absence of an affordable public transport system, this makes job seeking and other forms of economic integration prohibitively expensive. Motivated by their uniqueness and their special place in South African economic and social life, this study seeks to develop a systematic understanding of the structure of the township economy. What emerges is a rich information base on the migration patterns to T&IS, changes in their demographic profiles, their labor market characteristics, and their access to public and financial services. The study then look closely at Diepsloot, a large township in the Johannesburg Metropolitan Area, to bring out more vividly the economic realities and choices of township residents. Given the current dichotomous urban structure, modernizing the township economy and enabling its convergence with the much richer urban centers has the potential to unleash significant productivity gains. Breaking out of the current low-level equilibrium however will require a comprehensive and holistic policy agenda, with significant complementarities among the major policy reforms. While the study tells a rich and coherent

story about development patterns in South African townships and points to some broad policy directions, its research and analysis will generally need to be deepened before being translated into direct policy action.

*Agricultural Law in Sub-Saharan Africa: Cases and Comments* introduces the subject of agricultural law and economics to researchers, practitioners, and students in common law countries in Sub-Saharan Africa, and presents information from the legal system in Botswana, Gambia, Ghana, Lesotho, Malawi, Nigeria, Sierra Leone, South Africa, Swaziland, Tanzania, Zambia, and Zimbabwe. The law and economics approach entails the use of quantitative methods in research. This is consistent with the expectations in an applied economics field such as agricultural economics. Covering the general traditional law topics in contracts, torts, and property, the book goes further to introduce cutting-edge and region-relevant topics, including contracts with illiterate parties, contract farming, climate change, and transboundary water issues. The book is supported by an extensive list of reference materials, as well as study and enrichment exercises, to deepen readers' understanding of the principles discussed in the book. It is a learning tool, first and foremost, and can be used as a stand-alone resource to teach the subject matter of agricultural law and economics to professionals new to the subject area as well as to students in law school, agricultural economics, economics, and inter-disciplinary classes. Offers research findings on such topics as food safety, climate change, transboundary natural resources, international sale of goods, patents, and trademarks to highlight the future sources of pressure on the agriculture industry Uses case-studies to provide real-world insights into the challenges and considerations of appropriate agricultural law development Challenges readers to carry out their own research in their areas of study, and to gain some understanding of the relationship between law, economics, and statistics Includes extensive resources, such as chapter summaries, study questions, and challenge questions at the end of each chapter to assist instructors and students in gaining full benefits from using the book Provides separate instructor and student study guides, a test bank, and test bank answers, in hardcopy and electronic formats

*Addressing Market Power in Southern Africa* Edward Elgar Publishing

In 1994 South Africa saw the end of apartheid. The new era of political freedom was seen as the foundation for economic prosperity and inclusion. The last two decades have seen mixed results. Economic growth has been volatile. While inequalities in public services have been reduced, income inequality has increased, and poverty has remained stagnant. As the twentieth anniversary of the transition to democracy approaches in 2014, the economic policy debates in South Africa are in full flow. They combine a stocktake of the various programs of the last two decades with a forward looking discussion of strategy in the face of an ever open but volatile global economy. Underlying the discourse are basic and often unresolved differences on an appropriate strategy for an economy like South Africa, with a strong natural resource base but with deeply entrenched inherited inequalities, especially across race. This volume contributes to the policy and analytical debate by pulling together perspectives on a range of issues: micro, macro, sectoral, country wide and global, from leading economists working on South Africa. Other than the requirement that it be analytical and not polemical, the contributors were given freedom to put forward their particular perspective on their topic. The economists invited are from within South Africa and from outside; from academia and the policy world; from international and national level economic policy agencies. The contributors include recognized world leaders in South African economic analysis, as well as the very best of the younger crop of economists who are working on the study of South Africa, the next generation of leaders in thought and policy.

Economics for South African Students Oxford University Press South Africa experienced a momentous change of government from the Apartheid regime to its first democratic government in 1994. This book provides an up-to-date and comprehensive assessment of South Africa's economic policies and performance under democracy. The book includes a stand-alone introduction and economic overview, as well as chapters on growth, monetary and exchange rate policy and fiscal policy, on capital flows and trade policy, on investment and industrial and competition policy, on the effect of AIDs in the macroeconomy, and on unemployment, education and inequality and poverty. Each chapter, and the overview chapter in particular, also addresses prospects for the future.

The dismantling of the apartheid regime in South Africa caused massive transformation in both geographical and economic terms, not only in this country but also in the region as a whole. As the post-apartheid government enters its second term, this captivating volume assesses its progress in unravelling the geography of apartheid, both in South Africa itself and in its relationships with other countries in Southern Africa and Africa. It also considers the ways in which South Africa, now that it is no longer a pariah state, has begun to position itself within the current global economy. Examining South Africa's land and agriculture, mining and minerals, manufacturing, tourism, corporate finance, the labour market and transport, the volume discusses the challenges of balancing growth and redistribution, the extent and nature of progress, change and relationships within the regional and global economy. A compelling investigation into the economics of South Africa's neighbouring states in relation to their natural resources, colonialism and inter-relationships with themselves and with South Africa leads to a focus on the region as a whole and its relations with the global economy.

The COVID-19 outbreak is worsening an already fragile economic outlook. Since 2013, growth has been modest and unemployment has been rising. Policy uncertainty has been the main driver of low confidence and subdued investment. Following a sharp fiscal deterioration in recent years, the crisis also heightened debt sustainability challenges.

Why has land reform been such a failure in South Africa? Will expropriation without compensation solve the problem? What can be done to get the land programme back on track? In Land

Matters, Tembeka Ngcukaitobi tackles the past, present and future of the land question in South Africa. Going back in history, he shows how Africans' communal systems of landownership were used by colonial rulers to deny that Africans owned the land at all. He explores the effects of the Land Acts, Bantustans and forced removals. And he evaluates the ANC's policies on land throughout the struggle years, during the negotiations of the 1990s, and in government. Land Matters unpacks the government's achievements and failures in land redistribution, restitution and tenure reform, and makes suggestions for what needs to be done in future. The book also explores the power of chiefs, the tension between communal landownership and the desire for private title, the failure of the willing-seller, willing-buyer approach, women and land reform, the role of banks, and the debates around amending the Constitution. Steering clear of the simplistic and polarising terms of the land debate, Ngcukaitobi argues for a return to the nuanced constitutional requirements of justice and equity in South Africa's land policy. Thoughtful and provocative, Land Matters sheds light on one of the most topical, complex and urgent issues in South Africa today.

*Special Focus on Diepsloot* Penguin Random House South Africa

This book analyzes the phenomenon of xenophobia across African countries. With its roots in colonialism, which coercively created modern states through border delineation and the artificial merging and dividing of communities, xenophobia continues to be

a barrier to post-colonial sustainable peace and security and socio-economic and political development in Africa. This volume critically assesses how xenophobia has impacted the three elements of political economy: state, economy and society. Beginning with historical and theoretical analysis to put xenophobia in context, the book moves on to country-specific case studies discussing the nature of xenophobia in Nigeria, South Africa, Zambia, Ghana and Zimbabwe. The chapters furthermore explore both violent and non-violent manifestations of xenophobia, and analyze how state responses to xenophobia affects African states, economies, and societies, especially in those cases where xenophobia has widespread institutional support. Providing a theoretical understanding of xenophobia and proffering sustainable solutions to the proliferation of xenophobia in the continent, this book is of use to researchers and students interested in political science, African politics, peace studies, security, and development economics, as well as policy-makers working to eradicate xenophobia in Africa.

### THE OXFORD HANDBOOK OF THE SOUTH AFRICAN ECONOMY

Academic Press

The embrace of socio-economic rights in South Africa has featured prominently in scholarship on constitution making, legal jurisprudence and social mobilisation. But the development has attracted critics who claim that this turn to rights has not generated social transformation in practice. This book sets out to assess one part of the puzzle and asks what has been the role and impact of socio-economic strategies used by civil society actors. Focusing on a range of socio-economic rights and national trends in law and political economy, the book's authors show how socio-economic rights have influenced the development of civil society discourse and action. The evidence suggests that some strategies have achieved material and political impact but this is conditional on the nature of the claim, degree of mobilisation and alliance building, and underlying constraints.
