Phylum Mollusca-Zoology Flashcards | Quizlet Molluscs Mollusca Gastropoda Bivalvia FromMollusca is the second-largest phylum of invertebrate animals after the Arthropoda.The members are known as molluscs or mollusks (/ ˈ m ɒ l ə s k /).Around 85,000 extant species of molluscs are recognized. The number of fossil species is estimated between 60,000 and 100,000 additional species. The proportion of undescribed species is very high.Mollusca - WikipediaGastropods are the most diverse class of the phylum Mollusca, comprising almost three quarters of the 110,000 or so species of molluscs known. Over 50,000 of these species belong to the mostly marine and freshwater Caenogastropoda while another 20,000 species belong to the subclass Pulmonata, of which most are terrestrial.Mollusca: Gastropoda - ScienceDirectThe gastropods (/ ˈ g æ s t r ɒ p ɒ d z /), more commonly known as snails and slugs, belong to a large taxonomic class of invertebrates within the phylum Mollusca, called Gastropoda.This class comprises snails and slugs from saltwater, from freshwater, and from the land.
