The riveting story of the American scientists, tinkerers, and nerds who solved one of the biggest puzzles of World War II—and developed one of the most powerful weapons of the war *12 Seconds of Silence* is the remarkable, lost story of how a ragtag group of American scientists overcame one of the toughest problems of World War II: shooting things out of the sky. Working in a secretive organization known as Section T, a team of physicists, engineers, and everyday Joes and Janes took on a devilish challenge. To help the Allies knock airplanes out of the air, they created one of the world's first "smart weapons." Against overwhelming odds and in a race against time, mustering every scrap of resource, ingenuity, and insight, the scientists of Section T would eventually save countless lives, rescue the city of London from the onslaught of a Nazi superweapon, and help bring about the Axis defeat. A holy grail sought after by Allied and Axis powers alike, their unlikely innovation ranks with the atomic bomb as one of the most revolutionary technologies of the Second World War. Until now, their tale was largely untold. For fans of Erik Larson and Ben Macintyre, set amidst the fog of espionage, dueling spies, and the dawn of an age when science would determine the fate of the world, *12 Seconds of Silence* is a tribute to the extraordinary wartime mobilization of American science and the ultimate can-do story.

Oh No! We're Gonna Die Too Sterling Publishing Company Text & Presentation is an annual publication devoted to all aspects of theatre scholarship. It represents a selection of the best research presented at the international, interdisciplinary Comparative Drama Conference. This anthology includes papers from the 31st annual conference held in Los Angeles, California.

Topics covered include Chicano theatre, the Vietnam War and 9/11 in the French theatre, actresses and modern Hamlet, Asian theatre, Antigone in pre- and post-communist Germany, adapting an Internet comic strip for the stage, and the future of dramatic literature in the academy, among others.

American 'Unculture' in French Drama Pearson Education
George W. Bush's service in the Texas Air National Guard was a contentious issue in three of his election campaigns: Governor of Texas - 1994, President of the United States - 2000, 2004. This monograph for historians explains the arcane, armed forces reserve system during the time of Bush's military service (1968-1974) and presents a history of such service. Bush's military biography is based primarily on source documents released by the White House in 2003 and 2004, plus those obtained by researchers through Freedom of Information Act requests. Selected documents from the former president's military service record appear in the 103-page appendix and are cited in the 51 pages of textual material.

Text & Presentation, 2007 Springer Science & Business Media
Was the Bush administration was successful in legitimating its preferences with habeas corpus, torture, and extraordinary rendition? As American transforms in the post-Bush era, scholars have begun to assess the post-9/11 period in American foreign and domestic policy, asking difficult questions regarding torture and human rights.

A book about the role America plays in the French imagination, as it translates to the French stage. Informed by a rich variety of Western cultural scholarship, Essif examines two dozen post-1960 works representing some of the most innovative dramaturgy of the last half century, including works by Gatti, Obaldia, Cixous, Koltes, and Vinaver.

How a Team of Inventors, Tinkerers, and Spies Took Down a Nazi Superweapon McFarland

Even those with no woodworking experience at all can experience the satisfaction of making beautiful furniture—right away. The secret lies in modern-day power tools, which allow anyone to produce first-class results without years of practice. And this superbly illustrated and easy-to-follow guide shows novices the way to success. It contains all the information necessary to a fundamental understanding of the craft, including essential descriptions of wood's characteristics, explanations of the basic principles of furniture construction, and guidance on all the necessary techniques. Buying lumber, planing, jointing, gluing, and using the tablesaw, bandsaw, routers, and drills: it's all here. For every one of the projects—which include a chest of drawers, bookcase, and end table—each procedure is shown in fine detail.
The Minaret Delmar Pub

This book shows how Eritrea and East Timor developed sophisticated strategies to liberate their countries from colonialism, and emphasizes that these insurgencies avoided terrorism.

A User's Manual Cambridge University Press

Oh No! We're Gonna Die Too came about due to the popularity of Bob's first book *Oh No! We're Gonna Die*. That book was mostly about the author's misadventures in Alaska. Many of his friends and associates approached him after reading the book and told him their stories which were very similar to his. He collected those stories and with a few details filled in and some observations by Bob, compiled them into the second book. This book is also written in a humorous fashion, but again conveys the apprehension, excitement and relief involved in life threatening adventures. This book shows how a relatively small mistake can quickly put one's life at risk in the Alaska wilderness. It also takes the reader on adventures throughout Alaska with a whole new cast of characters who continue the tradition of questionable judgment and bad luck. You will experience airplane crashes, wild critters trying to eat folks, extreme weather, malfunctioning equipment, sinking boats and many other challenges. These stories give the reader a personal look at how many Alaskans live, recreate and somehow survive. It is doubtful many of them would have survived if it weren't for pure luck. As one can see from these stories, there is not a lot of clear thinking or intelligence

involved in most of the stories, but there is an ample amount of excitement. Please enjoy your trip with us through our Alaska misadventures

Method, Application, and Management Springer

Over the past decade high performance computing has demonstrated the ability to model and predict accurately a wide range of physical properties and phenomena. Many of these have had an important impact in contributing to wealth creation and improving the quality of life through the development of new products and processes with greater efficacy, efficiency or reduced harmful side effects, and in contributing to our ability to understand and describe the world around us. Following a survey of the U.K.'s urgent need for a supercomputing facility for academic research (see next chapter), a 256-processor T3D system from Cray Research Inc. went into operation at the University of Edinburgh in the summer of 1994. The High Performance Computing Initiative, HPCI, was established in November 1994 to support and ensure the efficient and effective exploitation of the T3D (and future generations of HPC systems) by a number of consortia working in the "frontier" areas of computational research. The Cray T3D, now comprising 512 processors and total of 32 GB memory, represented a very significant increase in computing power, allowing simulations to move forward on a number of fronts. The three-fold aims of the HPCI may be summarised as follows; (1) to seek and maintain a world class position in computational science and engineering, (2) to support and promote exploitation of HPC in industry, commerce and business, and (3) to support education and training in HPC and its application.

VISUM is a software system that allows you to model all private and public transport types in one single integrated model. It is complemented by the microscopic traffic simulation system VISSIM. Together the programs form the PTV Vision system. Most basic data provided by transport information and planning systems can be managed consistently with VISUM and updated using a network editor. Unlike simple GIS systems, VISUM allows complex relationships within single or several transport systems to be retained, enabling you to create a suitable transport model. An intimate dialogue between two friends and luminaries on love, death, and the spiritual path, with guidance for the end-of-life journey We all sit on the edge of a mystery. We have only known this life, so dying scares us—and we are all dying. But what if dying is perfectly safe? What would it look like if you could approach dying with curiosity and love, in service of other beings? What if dying is the ultimate spiritual practice? Ram Dass and Mirabai Bush began their friendship more than four decades ago at the foot of their guru, Neem Karoli Baba, also known as Maharaj-ji. He transmitted to them a simple philosophy: love everyone, tell the truth, and give up attachment to material things. A year before Ram Dass passed, he reunited with Bush for an intimate dialogue—which became *Walking Each Other Home*. In this extraordinary book, you'll hear from two beloved teachers about the spiritual opportunities within the dying process. They generously share intimate personal experiences and timeless practices with courage, humor, and heart, gently exploring every aspect of this journey. Here you'll learn about guidelines for being a "loving rock" for the dying, how to grieve fully and authentically, how to transform a fear of death, leaving a spiritual legacy, creating a sacred space for dying, and much more. "Everybody you have ever loved is a part of the fabric of your being now," says Ram Dass. The body may die, but the soul remains. Death is an invitation to a new kind of relationship, in

the place where we are all One. Join these two lifelong friends and spiritual luminaries as they explore what it means to live and die consciously, remember who we really are, and illuminate the path we walk together.

BoD – Books on Demand

This book is a comprehensive analysis of the definitions, concepts, and recent research on malingering, feigning, and other response biases in psychological injury/ forensic disability populations. It presents a new model of malingering and related biases, and develops a "diagnostic" system based on it that is applicable to PTSD, chronic pain, and TBI. Included are suggestions for effective practice and future research based on the literature reviews and the new systems, which are useful also because they can be used readily by psychiatrists as much as psychologists. In *Malingering, Feigning, and Response Style Assessment in Psychiatric/Psychological Injury*, Dr. Young ambitiously sets out to articulate and synthesize the polarities involved in the assessment of response styles in psychological disabilities, including PTSD, pain, and TBI. He does so thoroughly and very even-handedly, neither minimizing the degree that outright faking can be found in substantial numbers of examinees, nor disregarding the possibility that there can be causes for validity test failure other than malingering. He reviews the prior systems for classifying evidence of malingering, and proposes his own criteria for feigned PTSD. These are conservative and well-grounded in the prior literature. Finally, the book contains dozens of very recent references, giving testament to Dr. Young's immersion in the personal injury literature, as might be expected from his experience as founder and Editor in Chief for *Psychological Injury and the Law*. Reviewer: Steve Rubenzer, Ph.D., ABPP Board Certified Forensic Psychologist *Homo Americanus and the Post-1960 French Resistance* U of Minnesota Press

This book covers the application of computational fluid dynamics from low-speed to high-speed flows, especially for use in aerospace applications.
