Soil quality assessment of rice production systems in ...

Soil Quality Assessment In Rice Organic matter, earthworms, micronutrients (Cu and Mn), and mean weight diameter were the most powerful soil properties in assessing differences in soil quality among the rice management systems. Manganese was the property most strongly correlated with yield (adjusted $r^2 = 0.365$, $P = 0.001$). Soil Quality Assessment in Rice Production Systems ... Organic matter, earthworms, micronutrients (Cu and Mn), and mean weight diameter were the most powerful soil properties in assessing differences in soil quality among the rice management systems. Manganese was the property most strongly correlated with yield (adjusted $r^2 = 0.365$, $P = 0.001$). Soil quality assessment in rice production systems ... Farmers believe that rotation of irrigated rice with soya bean increases soil fertility, 'softens' the soil and results in better weed control. 1 To improve soil quality, some farmers use fallowing and cattle grazing for 2-3 years. Farmers' assessment of soil quality in rice production ... Rice farmers' perspectives assessed using semi-

structured interviews alternated with discussion groups, and formal scientific assessment of soil quality in order to develop a MDS using ... Soil Quality Assessment in Rice Production Systems ... In order to assess soil quality following a scientific approach, the three main management systems for irrigated rice in Rio Grande do Sul were chosen: conventional (dry seedbed preparation and sowing, high tillage intensity), semi-direct (dry seedbed preparation and sowing, low tillage intensity), and pre-germinated (seedbed preparation and sowing on inundated fields, high tillage intensity). Soil quality assessment in rice production systems Soil quality assessment in rice production systems. PhD thesis, Wageningen University, The Netherlands. With summaries in English, Dutch and Portuguese. ISBN: 978-90-8504-761-2. Dedicated to: Farmers from "Banhado do Colégio". Abstract In the state of Rio Grande do Sul, Brazil, rice production is one of the most important Soil quality assessment in rice production systems Soil quality, as a measure of the soil capacity to function, can be quantified by indicators based on physical, chemical and biological properties. Maintaining soil quality at a desirable level in the rice cropping system is a very complex issue due to the nature of the production systems used. Soil quality assessment of rice production systems in
