For use with children and adults.A Review of Assessment Instruments and Procedures for Young Exceptional ChildrenHandbook for the Assessment of Driving Capacity
 This authoritative resource, now thoroughly revised for DSM-5, has set the standard for the comprehensive assessment of autism spectrum disorder (ASD). Leading experts demonstrate how to craft a scientifically grounded profile of each child's strengths and difficulties, make a formal diagnosis, and use assessment data to guide individualized intervention in clinical and school settings. Chapters review state-of-the-art instruments and approaches for evaluating specific areas of impairment in ASD and co-occurring emotional and behavioral disorders. Considerations in working with children of different ages are highlighted. With a primary focus on children, several chapters also address assessment of adolescents and adults. ÿ New to This Edition *Chapter on key implications of DSM-5 diagnostic criteria, plus related updates throughout the volume. *Chapter on advances in early identification (ages 0?3). *Chapter with in-depth case examples illustrating the evaluation decision-making process and common diagnostic challenges. *Chapters on pseudoscience (including strategies for advising parents) and future directions in the field. *Current assessment data, numerous new and revised measures, and cutting-edge screening

approaches.

Developmental Test of Visual Perception John Wiley & Sons

A compelling and compassionate case study approach to a broad range of neuropsychological disorders Neuropsychological Assessment and Intervention for Childhood and Adolescent Disorders focuses on the neuropsychological assessment and evidence-based practices available for assessing and treating children living with the etiological and neurological components of various disorders. Each chapter provides one or more case studies along with helpful background information, assessment results, and recommendations based on assessment data. Bridging science and practice, the book reviews the scientific literature, research on clinical implications, and evidence-based treatment of such disorders as: Dyslexia and Dyscalculia Specific Language Impairment/Dysphasia Autism Spectrum Disorders Attention-Deficit/Hyperactivity Disorder Tourette Syndrome Traumatic Brain Injury Childhood Cancer Epilepsy Cerebrovascular Disease Low Birth Weight Environmental Toxin Exposure Neurotoxins, Pregnancy, and Subsequent Disorders Chromosomal Anomalies Neurocutaneous Disorders Metabolic Disorders Each case study complements the content of each chapter by illustrating how the assessment process can inform intervention efforts for children. In addition, the cases humanize the effects of various disorders and demonstrate the usefulness of neuropsychological information in treatment and intervention planning, especially within children's educational and social contexts.

The Special Educator's Guide to Assessment Elsevier Health Sciences

"Handbook for the Assessment of Driving Capacity was created as a practical resource for individuals involved in determining the driving capacity of cognitively compromised populations. The book discusses the cognitive demands of driving ability and how various disorders and/or traumas may impact abilities necessary to driving, and how best to assess whether those abilities have been affected and to what extent." "Contributors to this work include physicians, neuropsychologists, and occupational therapists in order to give a full view of perspectives in determining driving capacity. The book will serve the needs of neurologists, neuropsychologists, and rehabilitation specialists commonly working with persons whose driving ability needs assessment." --Book Jacket.

Pediatric Skills for Occupational Therapy Assistants E-Book John Wiley & Sons

Individually administered test designed to assess overall visual perceptual ability in individuals ages 4 years 0 months through 95 years old and above.

Cultural Diversity in Neuropsychological Assessment provides a platform for clinical neuropsychologists, psychologists, and trainees to bridge cultures and speak to each other about the ethnically diverse communities they serve throughout the world. It allows readers to peek into their clinical filing cabinets and examine how they worked with diverse individuals from indigenous and migrant communities of Arab, Asian, European, Israeli, Latin American and Caribbean, Persian, Russian, Sub-Saharan African, and North American origin. The book first reviews important foundations for working with diverse communities that include key knowledge, awareness, skills, and action orientation. It then provides a collection of cases for each cultural geographic region. Each section begins with an introductory chapter to provide a bird's eye view of the historical and current state of clinical and research practice of neuropsychology in that region. Then, each chapter focuses on a specific community by providing surface and deep-level cultural background knowledge from the authors' unique perspectives. A case study is then covered in depth to practically showcase an evaluation with someone from that community. This is followed by a summary of key strategic points, lessons learned, references, further readings, and a glossary of culture specific terminology used throughout the chapter. In the end, the appendix provides a list of culturally relevant tests and norms for some communities. This ground-breaking peer-reviewed handbook provides an invaluable clinical resource for neuropsychologists, psychologists, and trainees. It increases self-reflection about multicultural awareness and knowledge, highlights practical ways to increase cultural understanding in neuropsychological and psychological assessments, and sparks further discussion for professional and personal growth in this area.

Every chapter has been updated to reflect current thought and research in the field. Chapters devoted to specialized tests in neuropsychology have been updated to reflect new editions of these popular instruments. Special topic chapters have been added such as working in pediatric coma rehabilitation, using the planning, attention, sequential, simultaneous theory of neuropsychological processes, additions on ADHD, and more appear written by the leading experts and practitioners in these fields to reflect the demands of current practice in clinical child neuropsychology.

HANDBOOK OF CLINICAL CHILD NEUROPSYCHOLOGY

Amer Occupational Therapy Assn

Psychological Management of Stroke presents a review and synthesis of the current theory and data relating to the assessment, treatment, and psychological aspects of stroke. Provides comprehensive reviews of evidence based practice relating to stroke Written by clinical psychologists working in stroke services Covers a broad range of psychological aspects, including fitness to drive, decision making, prevention of stroke, and involvement of carers and families Reviews and synthesizes new data across a wide range of areas relevant to stroke and the assessment, treatment, and care of stroke survivors and their families Represents a novel approach to the application of psychological theory and principles in the stroke field Oxford University Press

Learn to confidently manage the growing number of stroke rehabilitation clients with Gillen's Stroke Rehabilitation: A Function-Based Approach, 4th Edition. Using a holistic and multidisciplinary approach, this text remains the only comprehensive, evidence-based stroke rehabilitation resource for occupational therapists. The new edition has been extensively updated with the latest information, along with more evidence-based research added to every chapter. As with previous editions, this comprehensive reference uses an application-based method that integrates background medical information, samples of functionally based evaluations, and current treatment techniques and intervention strategies. Evidence-based clinical trials and outcome studies clearly outline the basis for stroke interventions. UNIQUE! Survivor's Perspectives help readers understand the stroke rehabilitation process from the client's point-of-view. UNIQUE! Case studies challenge readers to apply rehabilitation concepts to realistic scenarios. UNIQUE! A multidisciplinary approach highlights discipline-specific distinctions in stroke rehabilitation among occupation and physical therapists, physicians, and speech-language pathologists. Review questions in each chapter help readers assess their understanding of rehabilitation concepts. Key terms and chapter objectives at the beginning of each chapter help readers study more efficiently. Three new chapters broaden your understanding of stroke intervention in the areas of Using Technology to Improve Limb Function, Managing Speech and Language Deficits after Stroke, and Parenting after Stroke. Learning activities and interactive references on a companion Evolve Resources website help you review textbook content and locate additional information.

Educational and Psychological Assessment of Exceptional Children John Wiley & Sons Life Care Planning is an advanced collaborative practice concerned with coordinating, accessing, evaluating, and monitoring necessary services for individuals with significant medical adversity. Pedretti's Occupational Therapy: Practice Skills for Physical Dysfunction, 8th Edition prepares you for occupational therapy practice with adults who have physical disabilities. This cornerstone text provides a foundation for the development of clinical reasoning skills in a comprehensive, case-based learning approach to physical dysfunction. New full color photos and helpful pedagogy, including threaded case studies, OT Practice Notes, ethical considerations, and end-of-chapter review questions, reinforce learning, enhance retention, and prompt you to apply principles in a clinical setting. UNIQUE! Threaded case studies, woven throughout each chapter, help you apply concepts to real-life clinical practice. UNIQUE! Ethical Considerations boxes highlight the key ethical concerns of treatment options so you can practice ethically. UNIQUE! OT Practice Notes convey important considerations for professional practice. Focuses on the occupational therapist's role in health and wellness, which the OTA has identified as a key practice area in the 21st century. Information on prevention, rather than simply intervention or treatment, shows how OTs can take a proactive role in patient care. Evidence-based content included throughout, especially in regards to evaluation and intervention. Content on occupational therapy's commitment to considering cultural and ethnic diversity in every chapter. Key terms, chapter outlines, chapter objectives lay out the information you can expect to learn from each chapter.

Neurological Rehabilitation - E-Book Elsevier Health Sciences

Reflecting current practice with a renewed focus on function-based assessments and evidence-based interventions, Cognitive and Perceptual Rehabilitation: Optimizing Function includes all of the tools you need to make a positive impact on your patients' lives. This clinical resource summarizes, highlights, and constructively critiques the state of cognitive and perceptual rehabilitation. This text helps you enhance your patients' quality of life by promoting improved performance of necessary and meaningful activities, and decreasing participation restrictions. Evidence-based intervention tables focus on improving daily function through proven methods. Summary tables highlight each assessment's clinical utility and psychometric properties to provide you with the tools you need to choose the best assessment for each patient. An entire chapter on Application of Concepts features five case studies, each discussing background data and medical record review, evaluation findings, assessments, long-term goals, short-term goals, and interventions/functional activities to help you apply the theories and principles from the book to real-world situations. Handy learning aids including Key Terms, Learning Objectives, and Review Questions help you remember important information.

A Function-Based Approach John Wiley & Sons

This volume - now in its second edition - has been completely updated to provide the most comprehensive and accessible handbook of practices and tools for the clinical assessment of child and adolescent intelligence. Designed specifically as a teaching tool, it provides students with an accessible guide to interpretation and applies the same interpretive systems across many tests. It emphasizes the proper interpretation of intelligence tests within the context of a child's life circumstances and includes several devices to enhance the logical processes of assessment, beginning with test selection and concluding with the reporting of results. In addition, Clinical Assessment of Child and Adolescent Intelligence: - Stresses the importance of the interpretive process over the value of specific tests - Fosters a deeper understanding of the intelligence construct - Emphasizes learning by example, using valuable case studies and vignettes designed to provide students with concrete models to emulate This edition covers all facets of intelligence testing, including detailed explanations of test interpretation, theory, research, and the full-range

of testing options for preschoolers through adult clients. New chapters have been introduced on neuropsychological approaches, adolescent and adult intelligence, including coverage of WAIS-III and KAIT, and achievement and intelligence screeners have been added. And although designed primarily as a text for beginning graduate students, the book is also useful as a "refresher" for clinicians who are looking for updated assessment information.
