There is no doubt that behavioral economics is becoming a dominant lens through which we think about economics. Behavioral economics is not a single school of thought but representative of a range of approaches, and uniquely, this volume presents an overview of them. The wide spectrum of international contributors each provides an exploration of a central approach, aspect or topic in behavioral economics. Taken together, the whole volume provides a comprehensive overview of the subject which considers both key developments and future possibilities. Part One presents several

different approaches to behavioural economics, including George Katona, Ken Boulding, Harvey Leibenstein, Vernon Smith, Herbert Simon, Gerd Gigerenzer, Daniel Kahneman, and Richard Thaler. This section looks at the origins and development of behavioral economics and compares and contrasts the work of these scholars who have been so influential in making this area so prominent. Part Two presents applications of behavioural economics including nudging; heuristics; emotions and morality; behavioural political economy, education, and economic innovation. The Routledge Handbook of Behavioral Economics is ideal for advanced economics students and faculty who are looking for a complete state-of-the-art overview of this dynamic field.

This book was written with a dual purpose, as a reference book for practicing engineers and as a textbook for students of prestressed concrete. It represents the fifth generation of books on this subject written by its author. Significant additions and revisions have been made in this edition. Chapters 2 and 3 contain new material intended to assist the engineer in understanding factors affecting the time-dependent properties of the reinforcement and concrete used in prestressing concrete, as well as to facilitate the evaluation of their effects on prestress loss and deflection. Flexural strength, shear strength, and bond of prestressed concrete members were treated in a single chapter in the of flexural strength has third edition. Now, in the fourth edition, the treatment been expanded, with more emphasis on strain compatibility, and placed in Chapter 5 which is devoted to this subject alone. Chapter 6 of this edition, on flexural-shear strength, torsional strength, and bond of prestressed reinforcement, was expanded to include discussions of Compression Field Theory and torsion that were not treated in the earlier editions. In similar fashion, expanded discussions of loss of prestress, deflection, and partial prestressing now are presented separately, in Chapter 7. Minor additions and revisions have been made to the material contained in the remaining chapters with the exception of xv xvi | PREFACE Chapter 17. This chapter, which is devoted to construction considerations, has important new material on constructibility and tolerances as related to prestressed concrete.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning

whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In *Reinforcement Learning*, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Pathological Myopia is a major cause of severe vision loss worldwide. The mechanisms for vision loss include cataract, glaucoma, retinal detachment, and above all, degeneration of the macula within the posterior staphyloma. Pathological Myopia is one of the only current books to specifically address this disease and discusses recent developments in imaging technologies and various approaches to treatments, such as laser photocoagulation, photodynamic therapy, pharmacologic injections in the vitreous, and surgery. Complete with high-quality color images, this book is written and edited by leaders in the field and is geared towards ophthalmologists, including residents and fellows in training, glaucoma and cataract specialists, and vitreoretinal macula experts.

With the immense amount of data that is now available online, security concerns have been an issue from the start, and have grown as new technologies are increasingly integrated in data collection, storage, and transmission. Online cyber threats, cyber terrorism, hacking, and other cybercrimes have begun to take advantage of this information that can be easily accessed if not properly handled. New privacy and security measures have been developed to address this cause for concern and have become an essential area of research within the past few years and into the foreseeable future. The ways in which data is secured and privatized should be discussed in terms of the technologies being used, the methods and models for security that have been developed, and the ways in which risks can be detected, analyzed, and mitigated. The *Research Anthology on Privatizing and Securing Data* reveals the latest tools and technologies for privatizing and securing data across different technologies and industries. It takes a deeper dive into both risk detection and mitigation, including an analysis of cybercrimes and cyber threats, along with a sharper focus on the technologies and methods being actively implemented and utilized to secure data online. Highlighted topics include information governance and privacy, cybersecurity, data protection, challenges in big data, security threats, and more. This book is essential for data analysts, cybersecurity professionals, data scientists, security analysts, IT specialists, practitioners, researchers, academicians, and students interested in the latest trends and technologies for privatizing and securing data.

The Architect Registration Exam (ARE) is part of the licensing requirements for U.S. and Canadian architects. A computerized, closed-book exam, the ARE is administered year-round at a network of test centers. The topics represented on the ARE may be roughly divided into two areas: structural and nonstructural. We offer two primary study guides for the exam -- one volume devoted to each area. Each volume includes concise reviews of the exam topics, with practice problems and solutions. Volume I: Structural Topics offers a comprehensive review of ARE structural exam topics, including structural systems, building loads, wood and steel construction, soils and foundations, and lateral forces. The book provides 160 practice questions, with solutions, and test-taking strategy. The text is enhanced by illustrations, figures, and tables, along with a detailed index.

This title has received wide acclaim for its practical and reader-friendly approach to educational psychology, which demonstrates how complex psychological theories apply to the everyday experiences of in-service teachers. Coverage of educational psychology is framed so that aspiring or developing teachers can see themselves as professionals who continuously seek, find, and test better ways to help their students succeed. *PSYCHOLOGY APPLIED TO TEACHING*, 14th Edition, combines fresh concepts and contemporary research with long-standing theory and applications to create a book that addresses the needs of today's teachers and students. This edition also features integration of InTASC Standards, new Learning Objectives correlated with chapter headings and summaries, new Guides to Reading and Studying, new first-person accounts (Improving Practice through Inquiry: One Teacher's Story), and more. The importance of codebreaking and signals intelligence in the diplomacy and military operations of World War II is reflected in this study of the cryptanalysts, not only of the US and Britain, but all the Allies. The codebreaking war was a global conflict in which many countries were active. The contributions reveal that, for the Axis as well as the Allies, success in the signals war often depended upon close collaboration among alliance partners.

Sarafino's goal in *Principles and Procedures for Modifying Behavior* is to create a clear and engaging instrument that describes ways to analyze one's own specific behaviors in terms of the factors that lead to and maintain them and ways to manage those factors to improve the behaviors. The text is based on research, theory, and experiences to explain and provide examples of the concepts and methods of self-management in a comprehensive text. It focuses on topics in applied behavior analysis, behavior modification, behavior therapy, and psychology of learning. Two general topics shaped this text: making the book relative to a variety of fields by describing applications in psychology, education, counseling, nursing, and physical therapy and different academic levels and preparation. Several important objectives guided the content and organization of the text which is designed to cover a large majority of tasks or concepts that the Behavior Analyst Certification Board (www.bacb.com) has identified as the field's essential content and should be mastered by all behavior analysts.

This book comprises selected papers from the Fourth International Conference on Materials and Manufacturing Engineering (ICMME 2019). The contents focus on the latest developments in the synthesis and characterization of new materials, and highlights the challenges involved in the manufacturing and machinability of different materials. Advanced and cost-effective manufacturing processes and their applications are also discussed in the book. In addition, it covers topics like robotics, fluid dynamics, design and development, and different optimization techniques. The contents of this book will be beneficial to students, researchers, and industry professionals.

English-speaking scientists start with one vast advantage: the bulk of the world's scientific transactions are conducted in English. There are many who would go further and say that any scientific work of importance is published in English. This book, which is, in effect, the tip of a large iceberg, gives them the lie! In the Soviet Union alone we have a vast wealth of expertise supported by a treasury of books and publications, but it is effectively cut off from Western scrutiny by the language barrier. It therefore seems timely to lift the curtain a little and put some of the best of it on display. In this excellent compilation, Professor Valdman and Dr. Burov have assembled a cast list of leading Soviet scientists who provide us with a refreshingly different slant on a set of problems of concern to neuroscientists throughout the world. These scientific presentations are neither better, nor worse than but, rather, complementary to Western pharmacological thinking. Traditional Soviet approaches to animal psychology are here coupled with sophisticated latter-day neurochemistry and neurophysiology and, in the process, provide us with new insights into the molecular bases of animal responses to environment and to certain drugs. Apart from shedding new light on many contemporary problems, the findings reported here provide an important window on the thought processes of the foremost neuroscientists of the Soviet Union. This book cannot fail to be of interest to all who work in this expanding (and exciting) area. M.
