Palliative Care for Infants, Children, and Adolescents Oxford University Press

When a parent or parental figure is diagnosed with an illness, the family unit changes and clinical providers should consider using a family-centered approach to care, and not just focus on the patient coping with the illness.

Helping Children and Families Cope with Parental Illness describes theoretical frameworks, common parental illnesses and their course, family assessment tools, and evidence-supported family intervention programs that have the potential to significantly reduce negative psychosocial outcomes for families and promote resilience. Most interventions described are culturally sensitive, for use with diverse populations in diverse practice settings, and were developed for two-parent, single-parent, and blended families.

Service providers are increasingly called upon to serve clients at home, a setting even a seasoned professional can find difficult to negotiate. From monitoring the health of older populations to managing paroled offenders, preventing child abuse, and reunifying families, home-based services require models that ensure positive outcomes and address the ethical dilemmas that might arise in such sensitive contexts. The contributors to this volume are national experts in diverse fields of social work practice, policy, and research. Treating the home as an ecological setting that guides human development and family interaction, they present rationales for and overviews of evidence-based models

across an array of populations and fields of practice. Part 1 provides historical background and contemporary applications for home-based services, highlighting ethical, administrative, and supervision issues and summarizing the social policies that shape service delivery. Part 2 addresses home-based practice in such fields as child and adult mental health, school social work, and hospice care, detailing the particular population being treated, the policy and agency context, theories and empirical data, and practice guidelines. Part 3, the editors present a unifying framework and suggest future directions for home-based social work.

HANDBOOK OF EMPIRICAL SOCIAL WORK PRACTICE, VOLUME 2

Columbia University Press

Discussing palliative and end of life care across a range of diseases and illnesses, each chapter includes real-life case studies that focus on both the patient experience and the experiences of the family members of service users.

Original in its approach to palliative and end of life care, *Adult Palliative Care* focuses on a range of non-cancer conditions. Thoughtfully balancing theory with practice, and interprofessional in its scope, *Adult Palliative Care* would benefit any health professional dealing with or working in the field of palliative and end of life care.

When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the

dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical care strategies to the patient's values and circumstances. Approaching Death considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be

done."

and strategic planning for inter- or multi-faith healthcare chaplains and other spiritual care providers involved in the new field of documenting spiritual care in EMR. Topics explored among the chapters include: Spiritual Care Charting/Documenting/Recording/Assessment Charting Spiritual Care: Psychiatric and Psychotherapeutic Aspects Palliative Chaplain Spiritual Assessment Progress Notes Charting Spiritual Care: Ethical Perspectives Charting Spiritual Care in Digital Health: Analyses and Perspectives Charting Spiritual Care: The Emerging Role of Chaplaincy Records in Global Health Care is an essential resource for researchers in interprofessional spiritual care and healthcare chaplaincy, healthcare chaplains and other spiritual caregivers

"It is so important to advocate for things that may not always seem possible. Getting to work with patients/families at the end of their life is the ultimate honor." - Lauren G Markham, MSW, LCSW, APHSW-C "In this work, one

witnesses both depths of human suffering and heights of human transcendence that can inspire both awe and fear. At those times, I have found that surrendering my need to be "an expert" and instead, allow myself to simply be a "human" is the wisest action." - Kerry Irish, LCSW, OSW-C, FAOSW"--

Advance Care Planning (ACP) is an essential part of end of life care in the UK and most developed countries. It enables more people to live well and die as they would choose, and has significant implications for the individual person, their family and carers, and our wider society. In the context of an ageing population and increasing possibilities for medical interventions, ACP is a particularly important aspect of quality care. Expanded and fully updated throughout, this new edition gives a comprehensive overview of ACP and explores a wide range of issues and practicalities in providing end of life

care. Written by experts from around the world, the book takes a comprehensive look at the subject by exploring the wide range of issues and practicalities in providing ACP; framing the purpose, process, and outcomes of these plans; and providing an important update on national and international research, policy and practice. Chapters also discuss values, goals and priorities, and include detailed case examples to aid best practice. This book is an invaluable resource for all clinicians involved in the caring for people in their final stages of life. It is of particular value to GPs, palliative care specialists, geriatricians, social care teams, researchers and policy leads interested in improving end of life care.

Living with Dying is the first textbook on end-of-life care for social workers and other healthcare practitioners who work with the terminally ill and their families. Organized around theoretical issues in loss, grief, and bereavement, and around clinical practice with individuals, families, and groups, the book addresses practice with people who have specific illnesses such as AIDS, bone marrow disease, and cancer, and pays special

attention to patients that have been stigmatized by culture, ability, sexual orientation, age, and race, or homelessness.

A Guide for Health Social Workers

National Academies Press

The Handbook of Social Work in Health and Aging is the first reference to combine the fields of health care, aging, and social work in a single, authoritative volume. These areas are too often treated as discrete entities, while the reality is that all social workers deal with issues in health and aging on a daily basis, regardless of practice specialization. As the baby boomers age, the impact on practice in health and aging will be dramatic, and social workers need more specialized knowledge about aging, health care, and

the resources available to best serve older adults and their families. The volume's 102 original chapters and 13 overviews, written by the most experienced and prominent gerontological health care scholars in the United States and across the world, provide social work practitioners and educators with up-to-date knowledge of evidence-based practice guidelines for effectively assessing and treating older adults and their families; new models for intervention in both community-based practice and institutional care; and knowledge of significant policy and research issues in health and aging. A truly monumental resource, this handbook represents the best research on health and aging available to social workers today.

THE NURSING ROLE

Elsevier Health Sciences

This is the first book to explore the history, characteristics, and challenges of hospice social work, incorporating leading research into an underlying framework for practice and care. A longtime hospice social work practitioner, Dona J. Reese describes the hospice social work role in assessment and intervention with individuals, families, groups, organizations, and the community, while honestly confronting the personal and professional difficulties of such life-changing work. She introduces a well-tested model of psychosocial and spiritual variables that predict hospice client outcomes, and she advances a social work assessment tool

that documents their occurrence. Operating at the center of national leaders' coordinated efforts to develop and advance professional organizations and guidelines for end-of-life care, Reese reaches out with support and practice information, helping social workers understand their significance in treating the whole person, contributing to the cultural competence of hospice settings, and claiming a definitive place within the hospice team.
