**THE ROUTLEDGE
HANDBOOK OF
WASTE STUDIES**

Springer Nature
This two-volume book
constitutes the post-

conference proceedings of the 5th International Conference on Advances in Computing and Data Sciences, ICACDS 2021, held in Nashik, India, in April 2021.* The 103 full papers were carefully reviewed and selected from 781 submissions. The papers in Part I and II are centered around topics like distributed systems organizing principles, development frameworks and environments, software verification and validation, computational complexity and cryptography, machine learning theory, database theory, probabilistic representations database management system engines, data mining, information

retrieval query processing, database and storage security, ubiquitous and mobile computing, parallel computing methodologies, and others. *The conference was held virtually due to the COVID-19 pandemic.

FIXED POINT THEORY AND ITS APPLICATIONS TO REAL WORLD PROBLEMS

Springer
This book proposes new technologies and discusses future solutions for ICT design infrastructures, as reflected in high-quality papers presented at the 6th International Conference on ICT for Sustainable Development (ICT4SD 2021), held in Goa, India, on 5–6 August

2021. The book covers the topics such as big data and data mining, data fusion, IoT programming toolkits and frameworks, green communication systems and network, use of ICT in smart cities, sensor networks and embedded system, network and information security, wireless and optical networks, security, trust, and privacy, routing and control protocols, cognitive radio and networks, and natural language processing. Bringing together experts from different countries, the book explores a range of central issues from an international perspective.

Proceedings of the 42nd International Conference on Advanced Ceramics and Composites,

Volume 39, Issue 3

European Alliance for Innovation

Recent scandals and controversies, such as data fabrication in federally funded science, data manipulation and distortion in private industry, and human embryonic stem cell research, illustrate the importance of ethics in science. Responsible Conduct of Research, now in a completely updated second edition, provides an introduction to the social, ethical, and legal issues facing scientists today.

16th International Conference on Information Technology-New Generations (ITNG 2019) Springer Nature
This book presents refereed proceedings of the First

International Conference on Advances in Cyber Security, ACeS 2019, held in Penang, Malaysia, in July-August 2019. The 25 full papers and 1 short paper were carefully reviewed and selected from 87 submissions. The papers are organized in topical sections on internet of things, industry and blockchain, and cryptology; digital forensics and surveillance, botnet and malware, and DDoS and intrusion detection/prevention; ambient cloud and edge computing, wireless and cellular communication. *Artificial Neural Networks and Machine Learning - ICANN 2019: Theoretical Neural Computation* Springer Nature

Modern optimization approaches have attracted many research scientists, decision makers and practicing researchers in recent years as powerful intelligent computational techniques for solving several complex real-world problems. The Handbook of Research on Modern Optimization Algorithms and Applications in Engineering and Economics highlights the latest research innovations and applications of algorithms designed for optimization applications within the fields of engineering, IT, and economics. Focusing on a variety of methods and systems as well as practical examples, this book is a

significant resource for graduate-level students, decision makers, and researchers in both public and private sectors who are seeking research-based methods for modeling uncertain real-world problems. . *Innovative Data Communication Technologies and Application* Springer This book features high-quality papers presented at the International Conference on Computational Intelligence and Informatics (ICCI 2018), which was held on 28-29 December 2018 at the Department of Computer Science and Engineering, JNTUH College of Engineering, Hyderabad, India. The papers focus on topics

such as data mining, wireless sensor networks, parallel computing, image processing, network security, MANETS, natural language processing and Internet of things. Springer Nature Proceedings of The 8th ACPES INTERNATIONAL CONFERENCE 2022 (ASEAN Council of Physical Education and Sport) contain several papers that have been presented at a seminar with the theme "The Evaluation and Growth of Physical Education, Sport, and Health in The New Normal Era". This seminar was held on 28-30 October 2022 and was organized by the Sekolah Tinggi Olahraga dan Kesehatan Bina Guna and became a routine agenda every year. The 8th ACPES

INTERNATIONAL CONFERENCE 2022 (ASEAN Council of Physical Education and Sport) was realized this year by presenting various presenters, lecturers, researchers and students from universities both inside and outside Indonesia. The 8th ACPEP INTERNATIONAL CONFERENCE 2022 (ASEAN Council of Physical Education and Sport) presents 2 leading keynote speakers from Sport Science NIE/NTU Singapore and University Of Nottingham Malaysia, 6 Invited Speakers from University Sains Malaysia, Universitas Negeri Semarang, Sekolah Tinggi Olahraga dan Kesehatan Bina Guna, Nanyang Technological University,

Mahasarakam University and Srinakarimwirot University. In addition, presenters for the parallel sessions came from various State and Private Universities, Institutions, Academies and Schools. Some of them are those who have already sat and are about to take the oral exam. The plenary speakers presented topics covering various disciplines. They have provided a wealth of inspiring input on trending educational research topics around the world. The hope is that all prospective lecturers and students will share the results of their research to improve teaching processes and quality, as well as leadership. This international seminar presented the results of research,

reviews, and results of dedication carried out by researchers from various domestic and foreign agencies, attended by 168 participants from 5 countries, namely Malaysia, Thailand, the Philippines, Singapore and Indonesia. There were 66 papers that passed through a rigorous review process and were accepted by the committee. All papers reflect the scope of the Conference by following: Physical Education; Educational Model; Global Issues in Education and Research; Transformative Learning and Education; Sports Education, Sports Science and Educational Technology; Management;

Curriculum, Research and Development; Innovative Educational Practices and Effective Technologies in the Classroom; Education policy.

Advances and New Trends in Environmental Informatics Springer Nature

Seismology has come a long way. Being the scientific study of seismic waves and their allied phenomena, it has entered a multidisciplinary realm. As the main tool, it provides a wealth of information when applied systematically to dig inside the Earth structure.

Notwithstanding, the utility of seismic waves has increased manifold. Starting from knowing the epicenter of seismic events, it

has influenced mapping of civil engineering structures such as dams and bridges, as well as huge constructions. Although there is no dearth of technical papers in the area of seismic waves, there is an absence of synchronized and recent coherent contents in the direction of seismic waves. The book will be a unique contribution to the field of seismology, with the aim of assimilating theory and practices. It will provide a comprehensive glimpse of recent advancements in this area with a strong unification of theory and practices. The main objective of the book is to present an in-depth analysis of the theory and real

implementations of seismic waves as versatile probes that would be integrated with modern and future perspectives. The current and the future strategies to be discussed in the relevant areas of seismic waves will be another boon for readers. This book will cater to the needs of novices, researchers and practitioners. Additionally, the contents of the book will be useful for undergraduate as well as postgraduate students of earth science disciplines.

ACPES 2022 Springer
 "Fixed-point theory initially emerged in the article demonstrating existence of solutions of differential equations, which appeared in the second quarter of the 18th

century (Joseph Liouville, 1837). Later on, this technique was improved as a method of successive approximations (Charles Emile Picard, 1890) which was extracted and abstracted as a fixed-point theorem in the framework of complete normed space (Stefan Banach, 1922). It ensures presence as well as uniqueness of a fixed point, gives an approximate technique to really locate the fixed point and the a priori and a posteriori estimates for the rate of convergence. It is an essential device in the theory of metric spaces. Subsequently, it is stated that fixed-point theory is initiated by Stefan Banach. Fixed-point theorems give adequate conditions under which

there exists a fixed point for a given function and enable us to ensure the existence of a solution of the original problem. In an extensive variety of scientific issues, beginning from different branches of mathematics, the existence of a solution is comparable to the existence of a fixed point for a suitable mapping. The book "Fixed Point Theory & its Applications to Real World Problems" is an endeavour to present results in fixed point theory which are extensions, improvements and generalizations of classical and recent results in this area and touches on distinct research directions within the metric fixed-point theory. It provides new openings

for further exploration and makes for an easily accessible source of knowledge. This book is apposite for young researchers who want to pursue their research in fixed-point theory and is the latest in the field, giving new techniques for the existence of a superior fixed point, a fixed point, a near fixed point, a fixed circle, a near fixed interval circle, a fixed disc, a near fixed interval disc, a coincidence point, a common fixed point, a coupled common fixed point, amiable fixed sets, strong coupled fixed points and so on, utilizing minimal conditions. It offers novel applications besides traditional applications which are applicable to real world problems. The book is

self-contained and unified which will serve as a reference book to researchers who are in search of novel ideas. It will be a valued addition to the library"-

"Balancing Agility and

Discipline" begins by defining the terms, sweeping aside the rhetoric and drilling down to core concepts. The authors describe a day in the life of developers who live on one side or the other. Their analysis is both objective and grounded, leading to clear and practical guidance for all software professionals.

2020 International Conference on Computer Engineering and Application (ICCEA) Springer Nature

Unifying Themes in Complex Systems is a well-established series of carefully edited conference proceedings that serve to document and archive the progress made regarding cross-fertilization in this field. The International

Conference on Complex Systems (ICCS) creates a unique atmosphere for scientists from all fields, engineers, physicians, executives, and a host of other professionals, allowing them to explore common themes and applications of complex systems science. With this new volume, Unifying Themes in Complex Systems continues to establish common ground between the wide-ranging domains of complex systems science.

Responsible Conduct of Research Proceedings of the 28th International Symposium on Mine Planning and Equipment Selection - MPES 2019

This book includes original, peer-reviewed

articles from the 2nd International Conference on Cognitive & Intelligent Computing (ICIC-2022), held at Vasavi College of Engineering Hyderabad, India. It covers the latest trends and developments in areas of cognitive computing, intelligent computing, machine learning, smart cities, IoT, artificial intelligence, cyber-physical systems, cybernetics, data science, neural network, and cognition. This book addresses the comprehensive nature of computational intelligence, cognitive computing, AI, ML, and DL to emphasize its character in modeling, identification, optimization, prediction, forecasting,

and control of future intelligent systems. Submissions are original, unpublished, and present in-depth fundamental research contributions either from a methodological/application perspective in understanding artificial intelligence and machine learning approaches and their capabilities in solving diverse range of problems in industries and its real-world applications.

PERSONALITY TRAITS IN ONLINE COMMUNICATION

IGI Global
Authoritative and illuminating, this book demonstrates how we reveal the secrets of our character through the disclosures we make about ourselves in the online world. The

author expertly explores whether online information about people, derived from their search patterns, personal detail disclosures and the language they use when posting text, are all related to their personalities. The Internet era has given rise to an enormous explosion of data that is refreshed daily on a massive scale. The growth of online social network sites has created opportunities for more and more people to reveal intimate details about themselves and their lives. While some of these disclosures are consciously made, other, more subtle forms of person profiling can be produced by examining patterns in our online behavior and the

language we use in our online posts. As this book will show, techniques have been developed which enable researchers to build detailed personality profiles of people without their awareness, by examining online behaviour and psycholinguistic analysis. Establishing how unlocking the full potential of 'big data' is dependent on having the right analytical tools that can be applied speedily and cost-effectively on a massive scale, the author also asks how powerful these methods are, and can they really be used to influence us in the way their critics fear and proponents claim. Explaining how we reveal the secrets of our character through

the disclosures we make about ourselves in the online world, this is fascinating reading for students and academics in psychology, linguistics, computer science, and related areas.

ICHSMT'19 Springer
Nature

This book gathers the proceedings of the 9th International Conference on Computational Science and Technology (ICCST 2022), held in Johor Bahru, Malaysia, on August 27–28, 2022. The respective contributions offer practitioners and researchers a range of new computational techniques and

solutions, identify emerging issues, and outline future research directions, while also showing them how to apply the latest large-scale, high-performance computational methods.

Springer Nature
The Routledge Handbook of Waste Studies offers a comprehensive survey of the new field of waste studies, critically interrogating the cultural, social, economic, and political systems within which waste is created, managed, and circulated. While scholars have not settled on a definitive

categorization of what waste studies is, more and more researchers claim that there is a distinct cluster of inquiries, concepts, theories and key themes that constitute this field. In this handbook the editors and contributors explore the research questions, methods, and case studies preoccupying academics working in this field, in an attempt to develop a set of criteria by which to define and understand waste studies as an interdisciplinary field of study. This handbook will be invaluable to those wishing to broaden their understanding of waste studies and to students and practitioners of geography, sociology, anthropology, history, environment, and

sustainability studies.

GLOBAL ACTION FOR SCHOOL LIBRARIES

Springer Nature

This book presents the latest research in the fields of computational intelligence, ubiquitous computing models, communication intelligence, communication security, machine learning, informatics, mobile computing, cloud computing, and big data analytics. The best selected papers, presented at the International Conference on Innovative Data Communication Technologies and Application (ICIDCA 2021), are included in the book. The book focuses on the theory, design, analysis, implementation, and

application of distributed systems and networks.

This book provides a
comprehensive
overview and
examination of the
international aspect of
Events Management
and the many

challenges and complications that arise in the planning and delivery specifically of cross-border and cross-cultural events. Authored by a current academic and ex-practitioner in the field, this book boasts an excellent balance of theory with practical advice and guidance. Chapters cover all the key concepts needed to manage and deliver an international event and fully reflect the current trends and issues facing the sector today. These include: sustainability, digital communication, social media, Big Data, corporate social responsibility, accessibility, security issues, and managing volunteers among many others. International case

studies are included in each chapter accompanied by study questions and useful weblinks for further reading and research. This will be of great interest not only to students and researchers of International Events Management, Tourism and Hospitality, but also to current practitioners in the Events sector.

Advances in Computing and Data Sciences

Springer Nature

This book is an outcome of the 35th International Conference EnviroInfo 2021, held at Humboldt University Berlin, organized by the technical committee for Environmental Informatics of the German Informatics Society. It presents a

selection of papers that describe innovative scientific approaches and ongoing research in environmental informatics and the emerging field of environmental sustainability, promoted and facilitated by the use of information and communication technologies (ICT). The respective articles cover a broad range of scientific aspects including advances in core environmental informatics-related technologies such as earth observation, environmental modelling, big data and machine learning, robotics, smart agriculture and food solutions, renewable energy-based solutions, optimization of infrastructures, sustainable industrial

processes and citizen science, as well as applications of ICT solutions intended to support societal transformation processes toward the more sustainable management of resource use, transportation and energy supplies. A special focus lies on

the question how environmental informatics can contribute to achieving the United Nations Sustainable Development Goals. Given its scope, the book is essential reading for scientists, experts and students in these fields of research.
