Hospitality Management and Health

Tourism in India Deep and Deep Publications Traditional East Asian healthcare systems have moved rapidly from the fringes of healthcare systems in the West towards the centre over the past 50 years. This change of status for traditional medicines presents their practitioners with both opportunities and challenges as the focus shifts from one of opposition towards one

of integration into biomedically dominated healthcare systems. Integrating East Asian Medicine into Contemporary Healthcare examines the opportunities and challenges of integrating East Asian medicine into Western healthcare systems from an interdisciplinary perspective. Volker Scheid and Hugh MacPherson bring together contributions from acknowledged experts from a

number of different disciplines - including clinical researchers, Chinese Medicine practitioners, historians, medical anthropologists, experts in the social studies of science, technology and medicine - to examine and debate the impact of the evidence-based medicine movement on the ongoing modernization of East Asian medicines. The book considers the following

questions:
•What are the values, goals and ethics implicit within traditional East Asian medical practices? • What claims to effectiveness and safety are made by East Asian medical practices? •What is at stake in subjecting these medical practices to biomedical models of evaluation? • What constitutes best practice? How is it to be defined and measured? • What are the ideologies and

politics behind the process of integration of East Asian medical practices into modern health care systems? • What can we learn from a variety of models of integration into contemporary healthcare? *Medical Tourism: Global Outlook And Indian Scenario* SREEKUMAR V T
Tourism is a global phenomenon. Because it is an important, even vital, source of income for many

countries in the world. Its importance was recognized in the Manila Declaration on World Tourism of 1980 as “an activity essential to the life of nations because of its direct effects on the social, cultural, educational, and economic sectors of national societies and on their international relations and its indirect effects on the development of allied industries like transport, hotel

etc.”.Medical Tourism is one form of tourisms and which means a journey that patients take from one country to another country to get cost effective and efficient medical treatment, followed by a great vacation at some of the most beautiful locations. India is one of the major players in this industry. Currently, it hosts about 1.27 million medical tourists from industrialized countries like UK, USA and

Canada and from its neighboring countries such as Bangladesh, Sri Lanka, and China. Its foreign exchange earnings from medical tourism are estimated to be around US \$ 1.8 billion. The estimated number of medial tourists in India in 2015 would be between 1.21 million and 2.78 million. The estimated revenue would lie between US \$ 1719 million to US \$ 3964 million in 2015. Medical

tourism industry in India has potential to contribute around 25 percent to the country's Gross Domestic Product in the next five years, if fully tapped. The present book titled Sociology of Medical Tourism highlights various dimensions, identifies different issues and suggests further development of this multimillion dollar industry in India in an

in-depth manner. Medical Tourism is one of the most important trust areas which emerge in the past century and because of its multiple level of use it also become subject matter of research in various subjects including Sociology. It is hoped that this book, with its wide-ranging and in-depth content, critical insights and detailed analysis of the concept, prove to be

immensely resourceful to the readers. I also assure that this book should be proven an informative referral for those who are working and doing research in the field of medical tourism.
