The disaster showed that when regulation becomes lenient on its enforcement of safety regulation and fails to keep safety as its top priority, disaster can occur like the one at Chernobyl, Ukraine in 1986. Chernobyl | The Safety Culture of Nuclear Power Chernobyl is a symbol of the largest nuclear energy disaster in the history of mankind with some fatal consequences caused by the radiation spread from the explosion of the 4th unit of the Chernobyl power plant. The levels of radiation in the power plant and in the nearby areas (including the city of Pripyat) ranged from 0.1 to 300 Sieverts per hour (almost billion - 1,000,000,000 times more than the usual natural background radiation measured in microSieverts - μSv). Safety in Chernobyl | CHERNOBYLwel.com The 1986 accident at the Chernobyl nuclear power plant in Ukraine, then part of the former Soviet Union, is the only accident in the history of commercial nuclear power to cause fatalities from radiation. It was the product of a severely flawed Soviet-era reactor design, combined with human error.
