100 PHOTOGRAPHS THAT CHANGED

THE WORLD

100 Photographs That Changed the World Visualization is the most important approach to extract relevant information from the huge amount of data produced in today's computational and experimental sciences. Selected contributions from the fifth in a well established series of workshops on "Visualization in Scientific Computing", organized by the EUROGRAPHICS Association, held at May 30 to June 1, 1994, in Rostock, Germany, treat topics of particular interest in current research: visualization of multidimensional data, flow visualization, data modeling,

time control, interaction, and volume visualization. Examples of applications for instance come from flow simulation, chemistry, medical imaging, and geography. Readers will profit in getting insight in state-of-the-art techniques which might help them to solve their visualization problems.

100 Photographs That Changed the World

Time Home Entertainment
Three-Dimensional Television Springer
This collection of photographs captures the moments that changed our modern world. The pictures are sometimes

beautiful, often striking - and undeniably powerful.

Time Home Entertainment

This book is the condensed result of an extensive European project developing the future of 3D-Television. The book describes the state of the art in relevant topics: Capture of 3D scene for input to 3DTV system; Abstract representation of captured 3D scene information in digital form; Specifying data exchange format; Transmission of coded data; Conversion of 3DTV data for holographic and other displays; Equipment to decode and display 3DTV signal.
