Research shows that the sharing of personal, first-hand stories not only enhances learning and eases the transition to a new role, but also helps novice educators to understand that their challenges are shared by others. With the goal of improving the experience of nurses transitioning from clinician to educator, in hospitals as well as schools of nursing, this unique book presents the stories of nurses who made this transition. It presents the findings of several qualitative studies addressing the question, "What is the lived experience of clinicians as they assume new roles as clinical nurse educators?" These narratives describe the challenges they faced and transformations in each nurse's identity and relationships during the transition process. The text includes recommendations from the Carnegie Foundation for the Advancement of Teaching and specific problem-solving strategies that have worked for others. The narratives are from nurse clinicians, nurse educators, and students who provide insights into such common dilemmas faced by novice educators as "How do I keep a patient safe while allowing the student nurse to practice a skill for the first time?" "If a student is slow to catch on to a procedure, how long do I wait before they fail?" "How do I help provide a safe and effective learning environment for new graduate nurses?" The book includes stories of students who describe caring and uncaring experiences with clinical nurse educators. Stories address cultural diversity, bullying, and dilemmas related to critical and ethical thinking. Nurse educators themselves share insights into what they wish they had done differently to guide students and new graduate nurses in their learning. While these storytellers had diverse clinical and educational backgrounds, there were consistent similarities between the experiences they described. One common thread was the need to embrace the role of a novice in order to succeed. The book will serve as a valuable text for graduate students in nurse educator courses as well as students and nurses seeking support, insight, and inspiration in their transition to the clinical nurse educator role. Key Features: Presents experiential narratives from nurses who made the transition from clinician to educator Describes important aspects of a nurse's transition from the role of clinical expert to that of novice educator Includes research-based insights in a highly

accessible style and format Integrates National League for Nursing Core Competencies into the text Provides inspiring, helpful, and comforting guidance for nurse clinicians feeling lost or confused in a new role

The project management profession is proliferating, and many company executives have ascertained that efficient and effective project management is required to help them achieve their strategic goals and objectives. However, there are challenges; according to the Standish group, 52% of all IT projects are delivered at 189% of budget, and 70% of all IT projects are late. As a result, many company executives are requiring project managers to enhance their project management acumen and become leaders who manage projects. Essentially, leaders who are equipped with business and domain knowledge, pragmatic tools and techniques, conflict resolution skills, and soft skills among others, that will galvanize their project teams and create an environment in which project success is the norm. Project Management: Novice-To-Expert! is a qualitative comparative case study approach that investigates how project managers in the context of the Engineering Procurement and Construction management (EPCM) industry initiate, navigate, and successfully traverse the arduous, but rewarding path that the author calls the Novice-To-Expert Continuum. Specifically, this book is an expose on how project managers become experts? The book primarily focuses on the EPCM industry, but the information uncovered by this research, can be applied to other professions such as IT, Healthcare, Banking, library science, Real Estate, Marketing, Sales, Accounting, Finance, government, sanitation, telecommunications, pharmaceuticals and beyond. The three major constructs of expertise: Absolute, relative, and the theory of deliberate practice are used as the study's conceptual framework, along with project management, continuing professional education (CPE) and informal learning to investigate, and ultimately expound on how project managers become experts in the context of the EPCM industry and other industries as mentioned above.

Cambridge University Press

This book explores how expertise is developed in higher education, both theoretically and practically, and focuses on this phenomenon in the visual domain. It examines what prompts and inspires students to learn via visual stimulus and shows the usefulness of modeling expert performance to facilitate learning. Characteristics of expertise are discussed in a variety of arts disciplinary contexts to demonstrate how deciphering the visual world can be accomplished. The authors discuss the role that visual stimulus plays within the context of the technologically developed world where educators face new challenges to promote the long-term retention of learning. This book interrogates how the visual is negotiated through various lenses to explore notions of the expert and the novice.

Originally published in 1992. This book brings together the work of a number of distinguished international researchers engaged in basic research on beginning reading. Individual chapters address various processes and problems in learning to read - including how acquisition gets underway, the contribution of story listening experiences, what is involved in learning to read words, and how readers represent information about written words in memory. In addition, the chapter contributors consider how phonological, onset-rime, and syntactic awareness contribute to reading acquisition, how learning to spell is involved, how reading ability can be explained as a combination of decoding skill plus listening comprehension skill, and what causes reading difficulties and how to study these causes.

The book, Teaching and Learning for Adult Skill Acquisition: Applying the Dreyfus and Dreyfus Model in Different Fields, will fill a unique niche in the field of adult, higher, and workforce education. It offers a current volume for scholars and practitioners based on both empirical studies and practice-based research on adult skill acquisition and development. Dreyfus and Dreyfus (1980, 1988, 2004, 2008) developed the novice to expert model of skill acquisition that illustrates growth over the course of a person's career in a particular domain. The skill model highlights a learner's movement across six levels of skill development: novice, advanced beginner, competent, proficient, expert, and mastery. This book will present examples of the application of the Dreyfus and Dreyfus model in different fields (i.e., health care, education, law enforcement, business, serious gaming, military, ethics training, etc.) providing insight into how practitioners can develop their skills in their particular domains and how educators can promote this development. This collection will be appropriate for a wide variety of professors, researchers, practitioners, and students in the field of adult, higher, and workforce education.

Students entering higher education expect their studies to lead them towards some specific form of professional career. But in this age, complex internationalized professions are the main source of work for graduates, so students need to prepare themselves for a future that can be volatile, changeable and challenging. This book shows how students navigate their way through learning and become effective students; it details how to shift the focus of their learning away from the formalism associated with the university situation towards the exigencies of working life. It is in this sense that the book explores how people move from being expert students to novice professionals. This book presents a model of professional learning fashioned out of a decade of research undertaken in countries half a world away from each other—Sweden and Australia. It uses empirical research gathered from students and teachers to show how students negotiate the forms of professional knowledge they encounter as part of their studies and how they integrate their

understandings of a future professional world with professional knowledge and learning. It reveals that as students move from seeing themselves as learners, they take on more of a novice professional identity which in turn provides a stronger motivation for their formal studies.
