5 1 Vector Calculus AndVector Calculus Complete the multivariable calculus saga with vector fields. Change is deeply rooted in the natural world. Fluids, electromagnetic fields, the orbits of planets, the motion of molecules; all are described by vectors and all have characteristics depending on where we look and when.Practice Vector Calculus | BrilliantMath2011, Vector Calculus 5.1 Vector Fields Definition 5.1 A vector field in the  $n$  dimensional space is a function in which a vector in the  $n$  dimensional space is plugged in and a vector in the  $n$  dimensional space is returned. Example 5.2 Let  $\phi$  be a function in  $n$  variables.  $\nabla \phi$  is a vector field in the  $n$  dimensional space.5.
