This clinical handbook is a complete guide to the use of nitrous oxide when performing dental procedures in children. Nitrous oxide offers the easiest and safest form of pharmacological behavior

management in this age group and can help greatly in reducing fear and anxiety toward dentists and dental treatment. Importantly, its use in children differs from that in adults, owing in part to the need for appropriate behavior management skills. In considering a range of clinical scenarios in which nitrous oxide is of value, this book will support clinicians in their daily practice. All aspects are covered, including rationale, basic science, mechanism of action, equipment, scavenging systems, technique, monitoring, safety, toxicity, documentation, and team building. Guidance is also provided on the use of nitrous oxide in special pediatric populations requiring oral health care. The book is supplemented by videos that will help readers to comprehend the text easily and to perform the technique efficiently and effectively.

This is a second edition of a hugely successful practical resource in orthodontics and paediatric dentistry - ideal for undergraduate dental students and post-graduates preparing for the MJDF and similar exams. Focuses on clinical problem-solving in orthodontics and paediatric dentistry - two closely-related topics that are usually separated into different volumes. Provides practical help with treatment planning, guiding the reader through the process of safe and effective decision-making. Provides two different approaches to the clinical cases - some topics include scenarios with questions and answers; others include differential diagnosis with a focus on how to plan and manage treatment effectively. Uses 'key-point' Evidence-Based' boxes systematically to emphasise core knowledge for assessment and provide a rationale for treatment approaches. Contains valuable 'mind-maps', which helps the reader consolidate information prior to exams. Includes orthodontic sections on severe crowding, additional canine problems, bilateral crossbite covering the use of temporary anchorage devices, incisor root resorption from an impacted maxillary canine, cone beam CT, tooth-size discrepancy assessment,

transposition, RME, SARPE and self-ligating brackets Includes paediatric dentistry sections on the use of CPP-ACP, indirect pulp caps, caries diagnosis systems, minimally invasive techniques, and the importance of caries risk assessment and appropriate fluoride prescription, and mechanisms for how fluoride works.
