Everyone has an opinion on transport: it significantly affects daily lives. This book highlights key transport opportunities and challenges, and identifies research requirements to inform policy discussion and support better societal outcomes. It does this by scanning across modes, continents, technologies and socio-economic settings, looking for common threads, points of difference and opportunities to make a difference. The book should appeal to prospective post-graduate students, professionals in transport and related fields, and those interested in better places and good discussions.

Hc 882, Fourth Report of Session 2005-06, Report, Together With Formal Minutes, Oral And Written Evidence Routledge

DOE/EIA-0484(2013). Presents an assessment by the Energy Information Administration of the outlook for international energy markets through 2040. The International Energy Outlook 2013 (IEO2013) projects that world energy consumption will grow by 56 percent between 2010 and 2040. Total world energy use rises from 524 quadrillion British thermal units (Btu) in 2010 to 630 quadrillion Btu in 2020 and to 820 quadrillion Btu in 2040 (Figure 1). Much of the growth in energy consumption occurs in countries outside the Organization for Economic Cooperation and Development (OECD), 2 known as non-OECD, where demand is driven by strong, long-term economic growth. Energy use in non-OECD countries increases by 90 percent; in OECD countries, the increase is 17 percent. The IEO2013 Reference case does not incorporate prospective legislation or policies that might affect energy markets.

Mobility as a Service (MaaS) is a new mobility concept gaining pace in many cities around the world. Its value proposition concerns integration of mobility services which is realized by providing trip planning and one-stop fare purchase for the user through a single platform. The MaaS vision is being enabled by advances in intelligent systems, the internet of things, cloud technology and big data management. This MaaS paper introduces and explains the MaaS concept (Chapter 1) and presents the MaaS enablers (Chapter 2 on Digital Enabler, Chapter 3 on Car-sharing and Chapter 4 on Bike-sharing) and MaaS application challenges (Chapter 5 on MaaS cost, risk and revenue challenges and Chapter 6 on MaaS infrastructure challenges). This paper was issued as Transport Trends and Economics 2018-2019 activity of the Economic Commission for Europe Working Party on Transport Trends and Economics.

Africa is one continent severely affected by the ravaging effects of global environment change yet it is least responsible for this. The continent's rural and urban poor are particularly vulnerable to reduced agricultural production, worsening food security, increased incidence of both flooding and drought, spreading of disease and heightening risk of conflict over scarce land and water resources. As such this timely book consisting of chapters authored by scholars from multidisciplinary backgrounds provides the reader a variety of contexts from which to understand the impacts of global environmental change and how affected African communities are adapting an mitigating the scourge. In addition it discusses different models for mitigation and adaptation applicable to local contexts.

Perspectives of climate change adaptation and mitigation strategies in Africa Africa Institute of South Africa

Ken Livingstone was elected Mayor of London on a platform that included a congestion charge for central London, a policy that became reality on 17 February 2003. Richards uses his experience as Director of a £2.5 million Government congestion charging study, as one of those who created the scheme Livingstone adopted and as advisor to the London Assembly, to provide a critical record of the introduction of the London Congestion Charge, and of its implications for congestion charging elsewhere.

MOTOR INDUSTRY MAGAZINE

International Energy Outlook 2013 With Projections to 2040

Design Against Crime will aid the design profession to meet the challenges presented by the competing needs and complex systems around crime and security. It proposes that designers should use their creative talents to develop innovative solutions to security problems that contribute to the ongoing fight against crime. The authors first explain the design against crime approach to security and security. They go on to provide practical advice on addressing crime and insecurity within the design process and offer practical examples of design being applied to security and safety. They also examine crime victimisation from a global perspective, highlighting the benefits worldwide of reducing opportunities for crime, including issues of national security, such as terrorism and natural disasters. A design-led, human-centred approach provides a way forward that is both aspirational and practical. The book is aimed primarily at design professionals, educators and students interested in safety and security, from all design disciplines, including product design, architecture, service design and communication design. The book should also be read by crime prevention experts, planners, local authorities, managers of urban environments and policymakers.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Vehicle Excise Duty as Environmental Tax The Stationery Office

Meeting the goals enshrined in the Paris Agreement and limiting global temperature increases to less than 2°C above pre-industrial levels demands rapid reductions in global carbon dioxide emissions. Reducing energy demand has a central role in achieving this goal, but existing policy initiatives have been largely incremental in terms of the technological and behavioural changes they encourage. Against this background, this book develops a sociotechnical approach to the challenge of reducing energy demand and illustrates this with a number of empirical case studies from the United Kingdom. In doing so, it explores the emergence, diffusion and impact of low-energy innovations, including electric vehicles and smart meters. The book has the dual aim of improving the academic understanding of sociotechnical transitions and energy demand and providing practical recommendations for public policy. Combining an impressive range of contributions from

key thinkers in the field, this book will be of great interest to energy students, scholars and decision-makers.

Concrete is ubiquitous and unique, found in every developed and developing country. Indeed, there are no alternatives to concrete as a volume construction material for infrastructure. This raises important questions of how concrete should be designed and constructed for cost effective use in the short and long term, and to encourage further radical development. Equally, it must be environmentally friendly during manufacture, in an aesthetic presentation in structures and in the containment of harmful materials. The central theme of the Congress is Concrete in the Service of Mankind, under which five self-contained Conferences, each dealing with a particular aspect, are planned. The Congress offers opportunity to discuss how to improve and extend this service to mankind using responsible exploitation, underwritten by sound technical understanding and research base. It brings together the shared skills and experience of the various disciplines involved in the construction process world wide. This major publication continues the tradition established by Dundee University of organizing major international conferences every three years dealing with some aspect of concrete and also the link between Spon and Dundee University for publication of the proceedings. This book should be of interest to concrete technologists; contractors; civil engineers; consultants; government agencies; research organizations.

THE EMERGENCE, DIFFUSION AND IMPACT OF LOW-CARBON INNOVATION

OECD Publishing

Focusing on technical, policy and social/societal practices and innovations for electrified transport for personal, public and freight purposes, this book provides a state-of-the-art overview of developments in e-mobility in Europe and the West Coast of the USA. It serves as a learning base for further implementing and commercially developing this field for the benefit of society, the environment and public health, as well as for economic development and private industry. A fast-growing, interdisciplinary sector, electric mobility links engineering, infrastructure, environment, transport and sustainable development. But despite the relevance of the topic, few publications have ever attempted to document or promote the wide range of electric mobility initiatives and projects taking place today. Addressing this need, this publication consists of case studies, reports on technological developments and examples of successful infrastructure installation in cities, which document current initiatives and serve as an inspiration for others.

CONGESTION CHARGING IN LONDON

The Stationery Office

The automotive industry ranks among the most significant business phenomena of the 20th century and remains vitally important today, accounting for almost 11% of the GDP of North America, Europe and Japan and one in nine jobs. In economic and social terms alike, its products have had a fundamental impact on modern society - for better and worse. Yet the industry has found it hard to adjust to recent challenges and is no longer much valued by the capital markets. It is riven with internal contradictions that inhibit reform, and faces a stark choice between years of strife or radical change. This book is a wake-up call for those who work in the automotive business. It highlights the challenges and opportunities that exist for managers, legislators, financial institutions and potential industry entrants. Most of all, it gives us all cause to reflect on the value of our mobility, today and tomorrow.

The Committee reports on the progress made by the Treasury in placing environmental objectives at the heart of its fiscal policies. This year's pre-Budget report (Cm. 6701, December 2005, ISBN 0101670125) is found to be inadequate, especially in the context of UK CO2 emissions actually increasing once more. No significant new measures were announced, and the Committee sees a continued slowing down of the Treasury's momentum in turning rhetoric into action. It believes the

Treasury should redefine Air Passenger Duty (APD) as an environmental tax and that APD rates should more accurately reflect the carbon emissions of the flights to which they apply. Charging APD on flights rather than passengers could also act as an incentive to more efficient use of aviation fuel. The Committee also recommends action on aviation fuel duty, biofuels, car energy efficiency, steps to wean the economy off over-reliance on oil, stamp duty and council tax reductions for homes built or refurbished to high environmental standards. Each pre-Budget report should include figures on total revenue from the climate change levy, aggregates levy, and landfill tax. Although the Treasury accepts the principle of increasing taxes on "bads" rather than "goods" its reluctance for bold reform of the tax system mystifies the Committee. A Green tax Commission should be reconsidered, to develop a proper communications strategy to sell the environmental programme to the public. The Committee exhorts the Government to make moves on the climate change problem, as waiting for universal agreement is a recipe for stasis. Finally, the Committee regrets the Treasury's decision to abolish the Operating and Financial Review required from large companies, in that it appears to view sustainable reporting as an optional extra. It hopes that the proposed new business reviews will continue to require some form of social and environmental disclosure from companies.

Ulrich's Periodicals Directory 2005 Oxford University Press

The growth of car use in several advanced economies has slowed down, stopped, or turned negative. This report summarizes insights into the drivers of change in car use.

Seventeenth Report of Session 2003-04 Government Printing Office

One of the principal arguments put forth by Brexit supporters is that by freeing the UK from the stranglehold of EU law, the country will be able to expand its markets through increased bilateral trade and enhance economic growth. This book tests this proposition by reference to the car industry. Brexit and the Car Industry explores the international position of the car market to argue that the hope of Brexit bringing regulatory freedom is illusory. The book starts by examining the structure of the vehicle industry, how its regulatory framework evolved and how the environment in which it operates is constrained by international standards and the practicalities associated with trading across different regulatory systems. By examining the evolution of vehicle regulations, particularly related to the environment, it argues that a UK independent path is not only impractical but self-defeating. The private car market is structured in such a way that is global, and meeting the various international regulatory requirements is a price of entry requirement which no bilateral trade agreements are likely to alter. The book also considers changing environment affecting the car industry in the context of an aspiration for regulatory freedom. The response to climate change and the impact of technological change - specifically driverless vehicles - are big questions for the industry and both are examined in this book. The book also considers the emergence of large metropolitan areas imposing their own use and environmental requirements operating separately to national standards. The future of electric and autonomous vehicles combined with the complexity of the regulatory environment with both international and localised pollution measures make the UK navigating a safe independent path through with a viable car industry highly questionable. Providing a comprehensive review of the relationship between regulatory frameworks and free trading models, this book is aimed at industry and legal professionals. It will also be of interest to students studying market behaviour, free trade law and the free movement of goods, and environmental protection.

Mobility as a Service Edward Elgar Publishing

This year's budget made some significant changes to annual road tax (vehicle excise duty or VED). The main changes included: introduction of six new VED bands from 2009-10, bringing the total number of bands to 13; applying this new regime of 13 bands to existing cars on the road first registered on or after 1 March 2001; and introduction of a new rate of VED for new cars in the first year in which they are bought. The Environmental Audit Committee's aims in this report were to examine the projected environmental impacts of these changes, to review how fair these changes are, and to make recommendations to the Treasury as to how it should proceed. The Committee felt that there was nothing intrinsically wrong in the rebanding of cars registered since 2001 but that there was a lack of data about the financial impacts of these change on lower-income groups. The new-first year rates were welcomed. However concerns remain that the differentials between VED bands are still not large enough to drive market transformation. The Treasury should have taken much greater care to explain the changes in VED in the Budget. If the point of green taxes is to change behaviour, they need to be properly publicised. In general, the Treasury needs to develop a proper communications strategy
