ESSENTIALS OF PUBLIC HEALTH

Petrogav International
Awarded second place in the 2017 AJN Book of the Year Awards in the Information Technology category. See how information technology intersects with health care! Health Informatics: An Interprofessional Approach, 2nd Edition prepares you for success in today's technology-filled healthcare practice. Concise coverage

includes information systems and applications such as electronic health records, clinical decision support, telehealth, ePatients, and social media tools, as well as system implementation. New to this edition are topics including data science and analytics, mHealth, principles of project management, and contract negotiations. Written by expert informatics educators Ramona Nelson and Nancy Staggers, this edition enhances the book that won a 2013 American Journal of Nursing Book of the Year award! Experts from a wide range of health disciplines cover the latest on the interprofessional aspects of informatics — a key Quality and Safety Education for Nurses (QSEN) initiative and a growing specialty area in nursing. Case studies encourage higher-level thinking about how concepts apply to real-world nursing practice. Discussion questions challenge you to think critically and to visualize the future of health informatics. Objectives, key terms and an abstract at the beginning of each chapter provide an overview of what you will learn. Conclusion and Future Directions section at the end of each chapter describes how informatics will continue to evolve as healthcare moves to an interprofessional foundation. NEW! Updated chapters reflect the current and evolving practice of health informatics, using real-life healthcare examples to show how informatics applies to a wide range of topics and issues. NEW mHealth chapter discusses the use of mobile technology, a new method of health delivery — especially

for urban or under-served populations — and describes the changing levels of responsibility for both patients and providers. NEW Data Science and Analytics in Healthcare chapter shows how Big Data — as well as analytics using data mining and knowledge discovery techniques — applies to healthcare. NEW Project Management Principles chapter discusses proven project management tools and techniques for coordinating all types of health informatics-related projects. NEW Contract Negotiations chapter describes strategic methods and tips for negotiating a contract with a healthcare IT vendor. NEW Legal Issues chapter explains how federal regulations and accreditation processes may impact the practice of health informatics. NEW HITECH Act chapter explains the regulations relating to health informatics in the Health Information Technology for Education and Clinical Health Act as well as the Meaningful Use and Medicare Access & CHIP Reauthorization Act of 2015.

As of August 1, 2012, Elsevier has discontinued publishing Paramedic, EMT and Fire titles in its Emergency Medical Services product line. All Student Resources for these products can now be accessed at: <http://ems.jbpub.com/chapleau/firstresponder>. All existing instructor-led courses prior to November 1, 2012 will remain active until September 1, 2013. Content is updated to reflect the new 2005 emergency cardiac care guidelines. Opening Scenarios set the scene for the chapter giving the student a clinical frame of reference. The scenarios are continued throughout the chapter and a solution is provided at the end of the chapter. Lesson Goals are provided at the beginning of every chapter to introduce the critical points and learning expectation of the chapter for the student. Chapter Objectives are listed at the beginning of the chapter. The Team Work Section in every chapter focuses on what a First Responder needs to know to work effectively with other emergency workers. Nuts and Bolts is a section at the end of every chapter. It incorporates the critical points, learning checklist, key terms, U.S. DOT objectives and workbook questions. This section is an excellent review area for students to check their understanding of chapter material. Critical Points are summarized at the end of each chapter. One paragraph summarizes for the student the take-home message of

the chapter. Learning Checklists at the end of every chapter summarize key points from the chapter. Key Terms are highlighted throughout the text as they first appear, and defined at the end of each chapter. U.S. DOT Objectives are listed that pertain to the chapter. Integrated Workbook: The workbook is integrated throughout the book as a section at the end of every chapter. Approximately 15 questions per chapter are provided in a variety of formats including multiple choice, fill-in-the blank, matching and labeling. Caution Boxes reflect extra hints and highlight precautions the First Responder should take when performing his or her duties. Illustrated skill sheets, integrated throughout the text, consist of step-by-step photographs that are easy to follow. Special Populations chapter includes information on such groups as the elderly, patients with disabilities and those who are critically ill. Special Situations appendix includes information on multiple casualty incidents and the incident command system-plus, information on extended care and wilderness care for those operations restricted by problems of patient access, limited equipment or special environmental situations. Rapid First Responder is a pocket guide packaged with every book, and is a handy reference for First Responders working in the field.

There have been major advances in technologies to support crisis response in the last few years. However, many aspects related to the efficient collection and integration of geo-information, applied semantics and situation awareness for disaster management are still open. To advance the systems and make them intelligent, an extensive collaboration is required between emergency responders, disaster managers, system designers and researchers. To facilitate this process the Geo-information for Disaster Management (Gi4DM) conference has been organized since 2005. Gi4DM is coordinated by the Joint Board of Geospatial Information Societies (JB GIS) and the ad-hoc Committee on Risk and Disaster Management. This volume presents the results of the Gi4DM 2012 conference, held in Enschede, the Netherlands, on 13-15 December. It contains a selection of around 30 scientific and 25 best-practice peer-reviewed papers. The 2012 Gi4DM focuses on the intelligent use of geo-information, semantics and situation awareness.
