Cyber-risks are moving targets and societal responses to combat cyber-victimization are often met by the distrust of young people. Drawing on original research, this book explores how young people define, perceive, and experience cyber-risks, how they respond to both the messages they are receiving from society

regarding their safety online, and the various strategies and practices employed by society in regulating their online access and activities. This book complements existing quantitative examinations of cyberbullying assessing its extent and frequency, but also aims to critique and extend knowledge of how cyber-risks such as cyberbullying are perceived and responded to. Following a discussion of their methodology and their experiences of conducting research with

teens, the authors discuss the social network services that teens are using and what they find appealing about them, and address teens' experiences with and views towards parental and school-based surveillance. The authors then turn directly to areas of concern expressed by their participants, such as relational aggression, cyberhacking, privacy, and privacy management, as well as sexting. The authors conclude by making recommendations for policy makers,

educators and teens – not only by drawing from their own theoretical and sociological interpretations of their findings, but also from the responses and recommendations given by their participants about going online and tackling cyber-risk. One of the first texts to explore how young people respond to attempts to regulate online activity, this book will be key reading for those involved in research and study surrounding youth crime, cybercrime, youth culture, media and

crime, and victimology – and will inform those interested in addressing youth safety online how to best approach what is often perceived as a sensitive and volatile social problem.

When most of Eastern Europe was struggling with dictatorships of one kind or another, the Democratic Republic of Georgia (1918-1921) established a constitution, a parliamentary system with national elections, an active opposition, and a free press. Like the Democratic Republic of

Georgia in 1918, its successors emerged after 1991 from a bankrupt empire, and faced, yet again, the task of establishing a new economic, political and social system from scratch. In both 1918 and 1991, Georgia was confronted with a hostile Russia and followed a pro-Western and pro-democratic course. The top regional experts in this book explore the domestic and external parallels between the Georgian post-colonial governments of the early

twentieth and twenty-first centuries. How did the inexperienced Georgian leaders in both eras deal with the challenge of secessionism, what were their state building strategies, and what did democracy mean to them? What did their electoral systems look like, why were their economic strategies so different, and how did they negotiate with the international community neighbouring threats. These are the central challenges of transitional governments around the

world today. Georgia's experience over one hundred years suggests that both history and contemporary political analysis offer the best (and most interesting) explanation of the often ambivalent outcomes. Terrorism is not a new phenomenon, but almost all communities, regardless of ethnicity, religion, social status or location, are now increasingly facing the challenge of terrorist threat. What makes a terrorist organization attractive to some citizens? A better understanding of the reasons why individuals choose to join terror groups may well enhance efforts to disrupt the recruitment process of

terrorist organizations and thereby support current and future counter-terrorism initiatives. This book presents the proceedings of the NATO Advanced Research Workshop, 'Countering Terrorist Recruitment in the Context of Armed Counter-Terrorism Operations', held in Antalya, Turkey, in May 2015. The goal of the workshop was to share existing ideas and develop new ones to tackle terrorist recruitment. The book contains 18 articles

covering topics which include: the role of NATO and other international entities in counter-terrorism; understanding recruitment methods and socialization techniques of terror networks by comparing them to gangs; social media in terrorist recruitment; drug money links with terrorist financing; and counter-terrorism and human rights. The book will be of interest to all those involved in developing, planning and executing prevention programs and policies in relation to both

armed and non-armed counter-terrorism operations.

The increased visibility of transgender people in mainstream media, exemplified by Time magazine's declaration that 2014 marked a "transgender tipping point," was widely believed to signal a civil rights breakthrough for

trans communities in the United States. In *Terrorizing Gender* Mia Fischer challenges this narrative of progress, bringing together transgender, queer, critical race, legal, surveillance, and media studies to analyze the cases of Chelsea Manning, CeCe McDonald, and Monica Jones. Tracing how media and state actors collude in the violent disciplining of these trans women, Fischer exposes the traps of visibility by illustrating that dominant representations of trans

people as deceptive, deviant, and threatening are integral to justifying, normalizing, and reinforcing the state-sanctioned violence enacted against them. The heightened visibility of transgender people, Fischer argues, has actually occasioned a conservative backlash characterized by the increased surveillance of trans people by the security state, evident in debates over bathroom access laws, the trans military ban, and the rescission of federal

protections for transgender students and workers. *Terrorizing Gender* concludes that the current moment of trans visibility constitutes a contingent cultural and national belonging, given the gendered and racialized violence that the state continues to enact against trans communities, particularly those of color.

With the current security crisis in the Ukraine, border security has become a pressing issue.

Both the annexation of Crimea and the temporary occupation of the Donbas region represent serious violations of the country's territorial integrity and of the wider international legal order. This book contains 13 presentations delivered during the two-day NATO Advanced Research Workshop (ARW) 'Addressing Security Risks at the Ukrainian Border through Best Practices on Good Governance - Sources and Counter Measures', which took place in Kyiv, Ukraine, in February

2016. The workshop consisted of 5 expert panels devoted to various aspects of building the integrity of the Ukrainian border management agencies to enhance the border security of the eastern flank of NATO. The topics of these panels were: the integrity of the security sector in Ukraine; corruption as a security risk in border management; institutional tools to combat corruption in border management; increasing preparedness for cross-border crises; and bilateral and

multilateral dimensions of international cooperation to enhance the integrity of border management agencies. The workshop contributed to raising awareness of emerging border security challenges, as well as providing a forum for the close cooperation of and the exchange of knowledge between the most relevant local and international agencies. It also made possible the discussion of issues such as the current refugee crisis and the implications - for security - of

corruption in border management in a wider context.

This book identifies and examines the legal challenges facing the shipping industry and ship management today. It first addresses flag state

rules and private international law as organisational tools of the shipowner for establishing the applicable legal framework in an age of increasing regulatory activity and extraterritorial effect of legislation. It then focuses on sustainability requirements and the liability of shipping companies managing supply chains and ships as waste. The third section considers challenges stemming from times of financial crisis and deals with the

cross-border impact of shipping insolvencies, the UNCITRAL Model Law, and the approaches of different jurisdictions. Finally, the fourth section concerns digitalisation and automation, including delivery on the basis of digital release codes, bills of lading based on blockchain technology, the use of web portals and data sharing, and particular aspects of the law relating to autonomous ships, notably in marine insurance and carriage of goods. The book will be a

useful resource for  
academics and practising

lawyers working in

shipping and maritime  
law.
