 While the South African government is tackling poverty amongst its citizenry and has developed various initiatives, this study looks at how generously ordinary South Africans give of their own time and money to assist with the alleviation of poverty, and

why. An overview of the government's poverty relief policy is provided and important factors beyond government programs are discussed, such as levels and motivations of corporate giving, the effectiveness of religious institutions in mobilization and distribution of aid, and the levels and effects of foreign aid. This analysis provides invaluable insights into the dynamics of poverty and giving in South Africa and outlines relevant policy and strategic implications.

This book integrates the disciplines of cancer pathology and epidemiology to provide a synergistic and complementary approach to understanding the molecular mechanisms of cancer. This book provides relevant information on the diagnostic, prognostic and predictive molecular pathology of cancer. Epidemiological studies, including descriptive epidemiology, risk factors and molecular mechanisms of disease

inform on the etiology and progression of cancer. The text concentrates on major cancers that are currently prevalent and those for which substantial molecular, pathological and epidemiological data is available. Each section is designed to provide an overview of that cancer type in terms of basic biology, review the current epidemiological data surrounding that cancer type and provide information on common practices and challenges related to the molecular

pathology of that cancer type. Several relevant techniques in molecular pathology, which facilitate diagnosis and treatment are also explored.

Pathology and Epidemiology of Cancer provides a succinct and comprehensive overview of multiple cancer types to guide clinicians during patient care and to guide scientists for innovations in research. It represents an integral resource for pathologists, epidemiologists, medical students as well as translational, basic and

clinical science researchers who are all working to progress the field of cancer in terms of diagnosis, treatment and prevention.

storage demonstration projects. Provides practical examples of the application of energy storage technologies that can be used by engineers as references when designing new systems.

TUMOR SUPPRESSOR GENES IN HUMAN CANCER

Springer Science & Business Media
The interplay between tumors and their immunologic microenvironment is complex, difficult to decipher, but its

understanding is of seminal importance for the development of novel prognostic markers and therapeutic strategies. The present review discusses tumor-immune interactions in several human cancers that illustrate various aspects of this complexity and proposes an integrated scheme of the impact of local immune reactions on clinical outcome. Current active immunotherapy trials have shown durable tumor regressions in a fraction of patients. However, clinical efficacy

of current vaccines is limited, possibly because tumors skew the immune system by means of myeloid-derived suppressor cells, inflammatory type 2 T cells and regulatory T cells (Tregs), all of which prevent the generation of effector cells. To improve the clinical efficacy of cancer vaccines in patients with metastatic disease, we need to design novel and improved strategies that can boost adaptive immunity to cancer, help overcome Tregs and allow

the breakdown of the immunosuppressive tumor microenvironment. Electric Motor Control Springer Science & Business Media This book focusing on the immunopathology of cancers is published as part of the three-volume Springer series Cancer Immunology, which aims to provide an up-to-date, clinically relevant review of cancer immunology and immunotherapy. Readers will find detailed descriptions of the interactions between cancerous cells and

various components of the innate and adaptive immune system. The principal focus, however, is very much on clinical aspects, the aim being to educate clinicians in the clinical implications of the latest research and novel developments in the field. In the new edition of this very well received book,

first published in 2015, the original chapters have been significantly updated and additional chapters included on, for example, current knowledge on the roles of T-helper cells and NK cells in tumor immunity, the part played by oncoviruses in the development of various cancers, and the

applications of fluorescent in situ hybridization, bioluminescence, and cancer molecular and functional imaging. Cancer Immunology: A Translational Medicine Context will be of special value to clinical immunologists, hematologists, and oncologists.
