Molecular Mechanisms of Tumor Cell Resistance to ...One

of the main challenges in cancer research is to develop new therapies to combat resistant tumors. The development of new effective therapies will be dependent on delineating the biochemical, molecular, and genetic mechanisms that regulate tumor cell resistance to cytotoxic drug-induced apoptosis. Molecular Mechanisms of Tumor Cell Resistance to ...
Homepage Teams Molecular Mechanisms of Tumor Cell Migration Dispersion of cancer cells, or cell migration, from the primary tumor to distal sites where metastases form is often the cause of death in cancer patients. Molecular Mechanisms of Tumor Cell Migration | CRCM
Molecular Mechanisms of Cancer Cancer involves uncontrolled cell division and tissue invasiveness (metastasis) caused by a series of mutations in the genes of proteins that regulate the cell cycle. These mutations typically involve either promotion of cell division or inactivation of cell cycle suppression. Molecular Mechanisms of Cancer - Pathway-Associated ...
Cancer is caused by specific DNA damage. Several common mechanisms that cause DNA damage result in specific malignant disorders: First, proto-oncogenes can be activated by translocations. For example, translocation of the c-myc proto-oncogene from chromosome 8 to one of the immunoglobulin loci on chromosomes 2, 14, or 22 results in Burkitt's lymphomas. Molecular mechanisms of cancer - PubMed
Cancer cells are able to induce their own growth stimulatory signals when mutations in the GFR gene occur, which facilitates activation in the absence of GFs or when overproduction of GFs results in an autocrine signalling loop. Other elements of cell signalling
Cancer biology: Molecular and genetic basis - Oncology for ...
Even though lymphangiogenesis and lymphatic metastasis were suppressed in LNM35 tumors expressing a soluble form of VEGFR-3, tumors still metastasized to the lungs, suggesting that LNM35 cells can spread via other mechanisms and routes, for instance the blood . These data demonstrate that blockage of VEGFR-3 signaling can suppress tumor lymphangiogenesis and lymphatic metastasis, but not necessarily lung metastasis, indicating that the mechanisms of lymphatic and lung metastasis may differ.
