No, we

do not need another standard textbook. What we need is a new kind of teaching tool that at once accommodates the modern-day classroom and exposes new century students to the contemporary world of global capitalism in which today's businesses operate. In primer form, Dr. Patrice Flynn clarifies the functional areas of business, a term used to describe what every businessperson needs to understand to be successful, from entrepreneurship to small business development, legal structure, going global, finance, big data, marketing, management, and more. This primer demonstrates how a master teacher teaches new century students, thus giving supremacy to pedagogy along with rigorous content. The primer can be used with both business students and the growing number of nonbusiness students interested in learning how business works before entering the world of work. Every student will come away not only with a sense of the business areas that pique their interest but also with a deeper understanding of business from which to craft next career steps. An Introduction to the Law of Business Organizations Combining current coverage with a student-friendly modular format, BASIC FINANCE: AN INTRODUCTION TO FINANCIAL INSTITUTIONS, INVESTMENTS & MANAGEMENT, 11E introduces the three primary aspects of finance and examines how they are interrelated to give students a firm foundation in all of finance--not just corporate finance. Each chapter offers a concise, self-contained treatment of one or two finance concepts, or institutions easily covered in a single class period. Students can build on what they learn through the text's Internet resources, number problems, illustrations using financial calculators, and a Microsoft Excel appendix. The time value of money is emphasized throughout. The 11th Edition includes numerous self-help problems with answers and relationships with answers, new coverage of classes of stock/preferred stock, new sections on Internet sources of information, and updated tax laws. chapters on programming logic, data input and output, and data frames help you establish the basic framework for conducting analyses. Further chapters on web scraping, statistical analysis, machine learning, and data visualization help you apply your skills to your research. More advanced information on developing graphical user interfaces (GUIs) help you create functional data products using Python to inform general users of data who don't work within Python.
