 Software design is a process by which the  
 software requirements are translated

into a representation of software components, interfaces, and data necessary for the implementation phase. The SDD shows how the software system will be implemented. Software Design Document (SDD) Template Solution architecture is a structural design that addresses a set of functional and non-functional requirements. Generally speaking, solution architecture is immediately implemented as a program, project or change. This differs from enterprise architecture that may include long term roadmaps that take many years to implement. The following are illustrative examples of solution architecture.

The easiest way to create a software architecture diagram is editing

an existing template. This software architecture template can save many hours in creating great software architecture by using built-in symbols right next to the canvas.

An effective design and architecture document comprises the following information sections: Software design document template. Discuss and form a consensus with stakeholders regarding what needs to be covered in the architecture design document before it has been created and use a defined template to map architectural solutions.
