**Center** Chemical And Biological Warfare AnChemical warfare (CW) involves using the toxic properties of chemical substances as weapons. This type of warfare is distinct from nuclear warfare, biological warfare and radiological warfare, which together make up CBRN, the military acronym for nuclear, biological, and chemical (warfare or weapons), all of which are considered "weapons of mass destruction" (WMDs). Chemical warfare - Wikipedia Biological warfare is the deliberate use of disease-causing biological agents such as bacteria, virus, rickettsiae, and fungi, or their toxins, to kill or incapacitate humans, animals, or plants as an act of war. The following characteristics of biological warfare make them weapons of choice for mass destruction and terrorist action: incubation

...Biological Warfare - an overview | ScienceDirect Topics The Secretary of State, acting under authority delegated pursuant to Executive Order 12851, has determined pursuant to the Chemical and Biological Weapons Control and Warfare Elimination Act of 1991 (CBW Act) that the Government of the Russian Federation has used chemical or biological weapons in... Russia: Implementation of Chemical and Biological Weapons ... Japan became interested in obtaining biological weapons during the early 1930s. Following an international ban on germ warfare in 1925 by the Geneva Protocol Japan reasoned that disease epidemics must make effective weapons. Japan developed new methods of biological warfare (BW) and used them on a large scale in China. During the Sino-Japanese War (1937-1945) and World War II, Unit 731 and .. Japan and weapons of mass destruction - Wikipedia Chemical warfare was an everyday horror of war. Men

huddled in the trenches, watching for the creep of gas clouds or the telling smells that meant a toxic chemical was starting to choke their lungs. The calls of "Gas! Gas!" that filled the air made World War I unlike any war that had come before it.<sup>10</sup> Horrifying Facts About Chemical Warfare In World War I ... Biological weapon, also called germ weapon, any of a number of disease-producing agents—such as bacteria, viruses, rickettsiae, fungi, toxins, or other biological agents—that may be utilized as weapons against humans, animals, or plants.. The direct use of infectious agents and poisons against enemy personnel is an ancient practice in warfare. ...
