Keeping the Peace Volume IV, like its predecessors, shows how

fortunate we are — in Queensland as in other Australian states — to have a non-political, non-military system of law enforcement, with highly trained officers ready to serve the community and impartially enforce the laws made by our representatives in parliament. With this in mind, it's very easy to lose sight of the fact that every day police officers put their own lives on the line to ensure public safety. Keeping the Peace is really their story, in their own words. Laurie Pointing, the editor and compiler of this

volume, started his working life as a station hand on a western cattle property before joining the Queensland Police Service in December, 1958 and rising to the rank of Assistant Commissioner. Following a police career spanning almost 35 years, and with several successful books already to his credit, Laurie has now used his wealth of experience to wield an editorial pen and bring together this collection of personal stories from Queensland Police Officers.

Rape is a violent act. Fittingly this is a violent story behind it; a story set in a violent land: Alaska, North of the Arctic Circle. Rape, a silent and vicious act, is one, in our human society that very often, definitely too often, goes unpunished, unrequited, ignored by the military, by world courts of law and religious leaders in all denominations. Rape has been considered a man's prerogative, a man's right if you will for centuries. Perhaps not on the books, but in the unseen worlds and silent deeds between the lines, beneath the dark robes of judges and darker thoughts of many self-emasculated politicians, who verbally deplore pornography, yet keep it encrypted in corners of their laptops - tied up in the old lace between their legs. To these insecure beings, sex (a beautiful act in itself) is dirty. BIRDS OF DARKNESS, a work of fiction, is based on fact. Captain Adriana O'Donovan, an ex air force officer and ace fighter pilot decorated in the second Gulf War, is gang raped by five fellow officers. Unconscious, she is driven into the blistering mid-eastern desert and, naked, left to die in the sand

and sun. Found by natives, her mutilated, sunburned body is dropped at a military medical facility. Revived, she is determined to bring the guilty before a military court. Laying her accusations before her commanding officer, Captain O'Donovan is told that she is lucky to be alive and, for her sake and the sake of the reputation of the US Military, to just shut up about the whole episode. Adriana forces the issue. As a result, she is stripped of her rank and forced to retire. The lady refuses to give in. As a civilian she quietly sets up a flying service headquartered in Fairbanks, Alaska and take the law into her own hands. In those hands, justice prevails.

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. *Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy* estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption

by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
