Logan Turner's *Diseases of the Nose, Throat and Ear, Volume 10* is intended to serve as a preparatory volume for senior students, general practitioners, and trainees in otolaryngology preparing for a fellowship examination in otolaryngology. The authors of this volume tried not to confine their presentations to pathology in Northern Europe given differences in the presentation of pathology in developed and the developing countries and the popularity of this book in Middle East, the Indian Subcontinent, and South East Asia. This book is organized into four main sections. The first three sections cover the anatomy, physiology, and diseases of the nose, head and neck, and the ear. The final section deals with pediatric otolaryngology. Several changes were made in this tenth volume. These include the presentation of otology, audiology, and otoneurology as an integrated whole; the rewriting of the section of rhinology; addition of a section on pediatric otolaryngology; and modification and expansion of the section on head and neck surgery. This book will be of interest to senior students, general practitioners, and trainees in otolaryngology.

Notwithstanding the important role of direct clinical and endoscopic examination in modern management of pathological conditions of the larynx, radiological study the and, more specifically, cross-sectional imaging by CT and MRI make definite diagnostic contributions by virtue of their potential to display superbly the deeper extent of laryngeal lesions. Indeed, remarkable progress has been achieved during recent years in CT and MRI techniques as applied to the neck region. This book sets out to provide a sorely needed update of our knowledge of the diagnostic potential of these cross-sectional methods and constitutes a very welcome addition to our series "Medical Radiology", which aims to cover all important clinical imaging fields of modern diagnostic radiology. It will be of great interest to general and head and neck radiologists as well as to ENT surgeons and
