The second edition of this book is virtually a new book. It is the only comprehensive text on the safety of essential oils and the first review of essential oil/drug interactions and provides detailed essential oil constituent data not found in any other text. Much of the existing text has been re-written, and 80% of the text is completely new. There are 400 comprehensive essential oil profiles and almost 4000 references. There are new chapters on the respiratory system, the cardiovascular system, the urinary system, the digestive system and the nervous system. For each essential oil there is a full breakdown of constituents, and a clear categorization of hazards and risks, with recommended maximum doses and concentrations. There are also 206 Constituent Profiles. There is considerable discussion of carcinogens, the human relevance of some of the animal data, the validity of treating an essential oil as if it was a single chemical, and the arbitrary nature of uncertainty factors. There is a critique of current regulations.

Essential Oils in Food Processing: Chemistry, Safety and Applications Elsevier Health Sciences

Aromatherapy is increasingly incorporated into midwifery practice, particularly in midwife-led units. It is the most commonly used therapy by midwives and birthing practitioners but access to up-to-date safety information is limited. Almost 90% of women may be using complementary therapies during pregnancy and birth and so it is very important that midwives are aware of safe and appropriate use based on contemporary evidence. This book covers safety, effectiveness, evidence, benefits and risks, and legal, ethical and professional issues related to incorporating aromatherapy into maternity care. Useful charts and tables are included for quick reference in clinical practice, making this is the ultimate handbook for using aromatherapy in midwifery practice. The scientific basis behind aromatherapy, including relevant anatomy and physiology, chemistry and pharmacology are covered, as well as a critical appraisal of the contemporary research evidence supporting the use of aromatherapy in maternity care. Essential oil profiles of the oils that can be safely used in pregnancy, birth and postnatally are also included.

READ "TOXIC TEETH" TO LEARN SECRETS ABOUT TOXIC TEETH unknown to most people, including most dentists. Sneaky and often silent, many dental issues may go undiagnosed for years, if ever. Mercury and other toxic heavy metals used in fillings, crowns, bridges, partials, dentures, and implants continually seep into every cell in our bodies creating heavy metal poisoning that triggers disease. Whether or not we know it, over half of us harbor gum infections. If we have ever had teeth extracted, it is quite likely that cesspools of infection (cavitations) bubble deep within our jawbones. Root canal teeth seed nasty infections, causing untold suffering. Dental infections spread into our brains, hearts, and other organs, leading to many kinds of diseases, such as heart disease, cancer, autoimmune diseases (allergies, asthma, thyroid problems), and facial pain. Prevent problems with your teeth and gums before they ever happen and reverse problems that you may already be experiencing.

Here is the missing link in Essential Oil literature, the first modern work written by the man who coined the word 'Aromatherapy.' In July 1910 René-Maurice Gattefossé discovered the healing properties of lavender oil after severely burning his hands in a laboratory explosion. This led him into a lifetime of research into Essential Oils. His remarkable book was first published in 1937 and has been out of print for many years. Now translated, it has been edited by Robert Tisserand, author of three books on aromatherapy (including the best-seller, *The Art of Aromatherapy*), editorial adviser of the *Journal of Alternative and Complementary Medicine* and editor of *The International Journal*

of Aromatherapy. The book is a fascinating blend of ancient and modern knowledge and aromatherapists will find it an essential tool of reference. Extensive notes are provided by Robert Tisserand at the back of the book. Chapters include those on human smells and animal smells, toxicity, the properties of essential oils and their constituents, the treatment of many diseases, and over fifty case studies from doctors.
