From a small Berlin backyard workshop to a global corporation, Siemens is one of the few industrial companies that can look back on such a long and successful tradition. For over 160 years, the Siemens name and brand represents strength of innovation, top technological achievements, quality, reliability, and international presence. This book is not so much about paying tribute to the efforts and accomplishments of Werner von Siemens. Rather, it focuses on the era of the second generation of entrepreneurs and the pioneering days of heavy-current engineering: its fantastic photos put the spotlight on selected reference projects in the business sectors of energy, mobility, industry, and communication, showing how Siemens advanced

the electrification of infrastructure and everyday life on a global scale. The illustrations convey a vivid and impressive picture of the pioneering feats achieved by this power engineering company between the 1880s and early 1930s in Germany, Europe, Latin America, and Asia.

Electrical drives lie at the heart of most industrial processes and make a major contribution to the comfort and high quality products we all take for granted. They provide the controller power needed at all levels, from megawatts in cement production to milliwatts in wrist watches. Other examples are legion, from the domestic kitchen to public utilities. The modern electrical drive is a complex item, comprising a controller, a static converter and an electrical motor. Some can be programmed by the user. Some can communicate with other drives. Semiconductor switches have improved, intelligent power modules have been introduced, all of which means that control techniques can be used now that were unimaginable a decade ago. Nor has the motor side stood still: high-energy permanent magnets, semiconductor switched reluctance motors, silicon micromotor technology, and soft magnetic materials produced by powder technology are all revolutionising the industry. But the electric drive is an enabling technology, so the revolution is rippling throughout the whole of industry.
