Biochemical Tests For Bacterial Identification

There are many biochemical tests available for bacterial

identification. Few of them are required to be carried out depending upon the

bacteria. The commonly used biochemical tests are as mentioned below (a) Catalase test (b) Coagulase test (c) Oxidase test (d) Sugar fermentation test (e) Indole test (f) Citrate test (g) Urease test

11 BACTERIAL IDENTIFICATION TESTS

The enzyme produced reacts with the biochemical

compounds present in the media and exhibits specific color change which is the

major key for the identification of bacterial species. There are 7 basic biochemical

tests with principle, procedure, and examples that can be

analyzed: Biochemical Tests for the Identification of Bacteria

...Biochemical Test of Bacteria Biochemical reactions are very important in the identification of

bacterial isolates and in the identification of different bacterial species. These tests

depend on the presence of certain enzymes, such as catalase, oxidase, urease, gelatinase, etc., produced by the

bacteria. Biochemical Test of Bacteria | Basic Microbiology ...Biochemical Test for

Identification of Bacteria Each different species of bacterium has a different

molecule of DNA (i.e., DNA with a unique series of nucleotide bases). Since DNA

codes for protein synthesis, then different species of bacteria must, by way of their

unique DNA, be able to... Enzymes ...Biochemical Test for Identification of

Bacteria ...Biochemical Test and Identification of Streptococcus

pneumoniae. Basic Characteristics Properties (Streptococcus pneumoniae)

Bile Solubility Positive (+ve) Catalase Negative (-ve) Gram Staining Positive

(+ve) Hemolysis Alfa Hemolysis Motility Non-motile OF (Oxidative-Fermentative)

Facultative anaerobes Oxidase Negative (-ve) Shape Diplococci Spore Non-sporing

Urease Negative (-ve) VP (Voges Proskauer) Negative (-ve) Fermentation of

Arabinose Positive (+ve) Arbutin Negative (-ve) Dulcitol ...Biochemical Test of

Bacteria - Microbiology Info.com Beta-glucuronidase test (MUG Test) : To identify

Escherichia coli. Escherichia coli produces the enzyme... Bacitracin Sensitivity Test:

other... Bile solubility test : To differentiate Streptococcus pneumoniae from

...Overview of Biochemical tests used to identify bacteria in ...Identification of

bacteria by biochemical tests. b. Litmus milk test: . When bacteria is grown in this

medium, there may be the production of acids or alkali or even no... c. Indole

production test: . Bacteria is grown in the peptone water culture. After 48 to 96hrs,

incubation at 37°C, it... d. ...Bacterial Identification| 8 Methods & Tests In

MicrobiologyAdvances have been made media for the presumptive identification of

common organisms encountered in clinical samples. Phenotypic characterisation of

bacteria with, physiological tests with a battery of biochemical tests differentiate

related bacterial genera as well as confirm their identity..Bacterial identification in the

diagnostic laboratory: how ...The biochemical tests in microbiology they are

a set of chemical tests that are made to the microorganisms present in a sample in

order to identify them; These microorganisms are usually bacteria. There is a large

number of biochemical tests available to a microbiologist. Biochemical Tests in

Microbiology: Types, What They Serve ..." Biochemical tests remain critical to

bacterial identification " Need to understand the principles of the common/primary

tests " Biochemical tests have limitations " In the future they will increasingly be

replaced by genotypic tests Biochemical identification of bacteria - KSU

Biochemical tests are among the most important methods for microbial

identification. Routine biochemical tests include tests for carbohydrate

fermentation (Figure 2.18 (A)), methyl red (Figure 2.18 (B)), citric acid utilization

(Figure 2.18 (C)), and hydrogen sulfide production (Figure 2.18 (D)). Sign in to
