This is the very first book to describe the superficial anatomic structure of the face and neck by means of detailed ultrasonography (US). This superbly illustrated book will help aesthetic physicians to familiarize themselves with the US anatomy of the face and neck and to understand the applications and benefits of US when performing minimally invasive aesthetic procedures in this region. A deep understanding of anatomy is imperative if such procedures are to be safe and effective. Bearing in mind the range of potential anatomic variations, US can offer vital assistance in identifying target structures of the face beneath the skin when carrying out treatments that would otherwise be performed "blind". In this book, readers will find detailed guidance on the use of US in the context of botulinum toxin and filler injections, threading procedures, and other minimally invasive aesthetic approaches. This is done with the aid of more than 530 US images, including cadaveric dissections and illustrations of volunteers and patients. For novices, valuable information is also provided on the basics of US imaging.

A MEDICAL BOOK THAT IS RICH ON IMAGES AND INFORMATION SPECIFICALLY ELABORATED FOR AND AIMED AT THOSE PROFESSIONALS SPECIALIZING IN AESTHETIC CORRECTIONS OF THE FACE • I dedicate this text, which is the result of many years od work, to all those who, like me, operate in the wonderful world of Aesthetic Medicine and Surgery. For a better understanding of the text,it is useful for me to illustrate my professional past. • It was 1982 when I injected my first phial of filler: it was bovine collagen. • From the initial small corrections, which I effected overcoming fears and worries, i performed wider corrections in various areas of the face, acquiring more and more confidence and awareness about what I was doing(this confidence was due to my knowledge of anatomy, whithout which I wouold have felt “naked”). • Now, in 2014, I still am, as I have always been in all this time, in search of slightly invasive techniques,more and more consolidating my knowledge in order to obtain the best and above all the most natural results. • I held, and am still holding, courses in various parts of the world, proposing to my colleagues all my knowledge acquired in these years, in particular the secrets, the points of attention, the correct therapeutic approach, the global vision of problems and possible limits. All that with the aim of working correctly and reaching the utmost results. • I take part in national and international congresses, where I illustrate my techniques and the new approaches in the field and I compare the colleagues’ experiences with mine with the humbleness of a person who is always willing to learn. • My experience, acquired also through teaching on corpses, has led me not only to a deeper knowledge of anatomy, but also to developing new personal techniques. • In consequence of the continous and appreciated request of material for consultation by Italian and foreign colleagues, I decided to undertake the onerous project of presenting, in this first volume, the anatomy and the noble structures, of which we must have a specific knowledge in order to better understand and assimilate the operative guide-lines used by me, which are going to be dealt with in the second volume. • This text has some peculiar characteristics that can be synthesized in two words: clarity and immediateness in consultation. As we well know, in order to be able to undertake a targeted therapeutic program, regardless of the substance used, a deep knowledge of the anatomy of the face is needed.
