Over the last 50 years, literally millions of GM cars and trucks have been built with Turbo 400 automatic transmissions. While these transmissions are respected for their durability and versatility, there always comes a point where the old transmission shows signs of wear. At some point, even the best transmissions need to be rebuilt. Respected automotive technical author Cliff Ruggles takes readers through the complex rebuild procedure of GMs most popular rear-wheel drive automatic transmission in this great new book. Enthusiasts have embraced the reliable GM Turbo Hydra-Matic 400 three-speed automatics for years, and the popularity of these transmissions is not slowing down. With his proven style, Ruggles walks through the step-by-step rebuild and performance upgrade procedures in a series of full-color photos for each of these models. Time saving tips are part of every buildup. This is a welcome addition to your automotive library. Amateurs and professionals alike will appreciate the advice and guidance offered on every page. Even if you end up deciding to have a professional take care of your transmission repair and performance needs, this information is crucial to understanding how the power gets from the engine to the road.

Every day we share encounters with others as we inhabit the space around us. In offering insights and knowledge on this increasingly important topic, this book introduces a range of empirical and theoretical approaches to the study of shared encounters. It highlights the multifaceted nature of collective experience and provides a deeper understanding of the nature and value of shared encounters in everyday life. Divided into four sections, each section comprises a set of chapters on a different topic and is introduced by a key author in the field who provides an overview of the content. The book itself is introduced by Paul Dourish, who sets the theme of shared encounters in the context of technological and social change over the last fifteen years. The four sections that follow consider the characteristics of shared encounters and describe how they can be supported in different settings: the first section, introduced by Barry Brown, looks at shared experiences. George Roussos, in the second section, presents playful encounters. Malcolm McCulloch introduces the section on spatial settings and - last but not least - Elizabeth Churchill previews the topic of social glue. The individual chapters that accompany each part offer particular perspectives on the main topic and provide detailed insights from the author's own research background. A valuable reference for anyone designing ubiquitous media, mobile social software and LBS applications, this volume will also be useful to researchers, students and practitioners in fields ranging from computer science to urban studies.

### **LEADING INNOVATION: HOW TO JUMP START YOUR ORGANIZATION'S GROWTH ENGINE**

Bentley Pub

Leading Innovation presents a unique, holistic approach to creating innovation at all levels of your organization. Authors Jeff DeGraff and Shawn Quinn have created a real-world, how-to playbook of integrated creativity tools and techniques for understanding where innovation comes from and harnessing its power to create a culture where real growth happens on a constant basis. Based on DeGraff's proven methods-which he teaches in his innovation program at the University of Michigan Ross School of Business and has applied at Fortune 500 companies around the world-this breakthrough guide focuses on systematically integrating business practices and connecting them to the value propositions they produce. You'll discover how to diagnose obstacles to innovation, realistically assess your options, and develop an integrated program of action that can be adjusted to meet the needs of any group, department, or business unit throughout your organization. You'll learn the 7 key steps to double-digit growth, sparking innovation in your: Leadership-teams, development, and behavior Strategic planning-identifying emerging opportunities Organizational culture and competency development Performance management processes-resource allocation, portfolio management Innovation incubation processes-stage-gate development processes, innovation networks Human resource management-staffing, team building,

organizational learning Throughout, insightful case studies demonstrate how these results-driven methods are supported by senior leadership at GE, Reuters, Coca-Cola, Pfizer, Johnson & Johnson, Eaton, and other leading innovators.

Description Three years ago a handful of people with mental health problems took part in a creative writing course facilitated by poet Elspeth Murray. They, and other people supported by the national mental health provider Advance Support, have since produced an outpouring of creative writing to express their hopes, moods, fears and fantasies about recovering from their condition - which we have gathered together for the first time in this anthology. Feeling good, feeling down, feeling contempt for professionals - all user and survivor states are captured here. About the Author Advance is a national charitable organisation. We provide places for people with learning disabilities or mental

health problems to live. We also provide support for them to live their lives the way they want, and advice for people seeking work or returning to work. Advance began as a not-for-profit organisation in 1974, working with a local Health Authority in Leicestershire to identify accommodation for patients as part of a large-scale discharge from a local hospital. Today Advance supports, houses and advises more than 3000 people in 33 counties across Central and Southern England.

The value of the groceries purchases in the USA is over \$500 billion annually, most of which is accounted for by packaged foods. Plastic packaging of foods is not only ubiquitous in developed economies, but increasingly commonplace in the developing world, where plastic packaging is instrumental in decreasing the proportion of the food supply lost to spoilage. This new handbook is a combination of new material and updated chapters, chosen by Dr. Sina Ebnesajjad, from recently published books on this subject. Plastic Films in Food Packaging offers a practical handbook for engineers, scientists and managers working in the food packaging industry, providing a tailor-made package of science and engineering fundamentals, best practice techniques and guidance on new and emerging technologies. By covering materials, design, packaging processes, machinery and waste management together in one book, the authors enable the reader to take a lifecycle approach to food packaging. The Handbook addresses questions related to film grades, types of packages for different types of foods, packaging technologies, machinery and waste management. Additionally the book provides a review of new and emerging technologies. Two chapters cover the development of barrier films for food packaging and the regulatory and safety aspects of food packaging. Essential information and practical guidance for engineers and scientists working at all stages of the food packaging lifecycle: from design through manufacture to recycling Includes key published material on plastic films in food packaging, updated specifically for this Handbook, and new material on the regulatory framework and safety aspects Coverage of materials and applications together in one handbook enables engineers and scientists to make informed design and manufacturing decisions

### **Driving-safety Systems** Independently Published

Millions of automobile accidents occur worldwide each year. Some of the most serious are rear-end crashes, side crashes within intersections, and crashes that occur when cars change lanes or drift into a lane. The holy grail of traffic safety is to avoid automobile accidents altogether. To that end, major automakers, governments, and universities are working on systems that allow vehicles to communicate with one another as well as the surrounding infrastructure (V2V/V2I for short). These systems show promise for such functions as intersection assist, left-turn assist, do-not-pass warning, advance warning of a vehicle braking ahead, forward-collision warning, and blind-spot/lane-change warning. This compendium explores the challenges in developing these systems and provides the latest developments in V2V/V2I

technology. It begins with a series of overview news stories and articles from SAE's magazines on the progress in this technology. This is followed by a series of technical papers on V2V/V2I dealing with the many technical aspects of design of these systems as well as discussions of such key issues as the need for extreme reliability assurances and traffic congestion overloads on the systems. Some of most interesting discussions in the book include: • Overview of a large-scale test in Germany to address reliability. • Effectiveness of different antennas and receivers that are used in various intersections settings, such as intersections where there are tall buildings or no buildings, and where high transmission power lines are located that can cause signal interference. • Various ways to communicate between vehicles and how messages are relayed to drivers. • Dedicated short range communication protocol for vehicle safety applications, which shows promise for combining and processing large amounts of information. Editor Ronald K. Jurgen prepared this book to be of use to engineers at automakers and electronic component suppliers; software engineers; computer systems analysts and architects; academics and researchers within the electronics, computing, and automotive industries; legislators, managers and other decision-makers in the government highway sector; traffic safety professionals; and insurance and legal practitioners. Mr. Jurgen served on the editorial staff of IEEE Spectrum for 30 years and is the editor of several electronics-related handbooks and several other electronics-related compendiums published by SAE International.
