chronological framework within an attractive, profusely illustrated modular format. There are four key elements to this innovative text. First, each chapter is organized into a series of 3-5 manageable modules and incorporates a number of effective learning tools to help students retain and apply the information. Secondly, Kail and Zolner integrate the field by consistently

presenting four fundamental themes in child development research. These themes are used throughout the book to provide students with a multi-layered foundation. Thirdly, Kail and Zolner introduce research methods in Chapter 2, and revisit methods again in every chapter. And finally, this text includes many applications demonstrating how research

translates into practice. *The Challenge of Children's Rights for Canada, 2nd edition* SAGE Publications Psychology is of interest to academics from many fields, as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every

aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

The Second Canadian edition of Santrock Essentials of Life-Span Development provides an approachable introduction to developmental psychology. Organized chronologically, Santrock covers the essentials from all periods of the human lifespan across 13 chapters. The new Second Canadian edition offers an increased focus on diversity with Indigenous content

weaved throughout. Canadian research, current events, and real-life examples are thoughtfully featured, ensuring the material is relevant and meaningful for learners. -- Essentials of Lifespan Development Pearson Higher Education AU Some may say that this book is long overdue; others, including myself, will state that the book appears at just the right time. The

latter is likely more true, for it is doubtful that many in the professions would, until now, link issues of learning disabilities with those of neurophysiological dysfunction in the manner in which ultimately must be the case. As a matter of fact, there are those who deny the relationship completely. Lee Wiederholt (1974)<sup>1</sup> in his short, but excellent, review of the

historical perspectives of learning disabilities, traces the early interest in this problem to the work of Gall (1802), and to his successors Broca (1861), Jackson (1864), Bastian (1869), and a few others. Each of these men would, at the time of this writing, be considered to have interests in the field of neurology, although at the time of their investigations, neurology per se was but a

gleam in the eye of the anatomical beholder. A relative detour then took place. Cerebral palsy, in the decades of the 1940s and 1950s, caught the attention of researchers through the work of Winthrop Morgan Phelps (orthopedist) and George Deaver (physiatrist) and one or two other medically oriented individuals. This was related to the writings of W. J. Little (1810-1894).

It was, however, Kurt Goldstein, Heinz Wemer, both eminent German scientists, and Alfred A.

## **EDUCATIONAL PSYCHOLOGY AUSTRALIAN EDITION**

U of Minnesota Press  
The essential reference for human development theory, updated and reconceptualized The Handbook of Child Psychology and Developmental Science, a four-volume reference, is the field-defining work to which all others are compared. First published

in 1946, and now in its Seventh Edition, the Handbook has long been considered the definitive guide to the field of developmental science. Volume 1, Theory and Method, presents a rich mix of classic and contemporary theoretical perspectives, but the dominant views throughout are marked by an emphasis on the dynamic interplay of all facets of the developmental system

across the life span, incorporating the range of biological, cognitive, emotional, social, cultural, and ecological levels of analysis. Examples of the theoretical approaches discussed in the volume include those pertinent to human evolution, self-regulation, the development of dynamic skills, and positive youth development. The research, methodological, and applied implications of

the theoretical models discussed in the volume are presented. Understand the contributions of biology, person, and context to development within the embodied ecological system. Discover the relations among individual, the social world, culture, and history that constitute human development. Examine the methods of dynamic, developmental research. Learn person-

oriented methodological approaches to assessing developmental change. The scholarship within this volume and, as well, across the four volumes of this edition, illustrate that developmental science is in the midst of a very exciting period. There is a paradigm shift that involves increasingly greater understanding of how to describe, explain, and optimize the course of human life

for diverse individuals living within diverse contexts. This Handbook is the definitive reference for educators, policy-makers, researchers, students, and practitioners in human development, psychology, sociology, anthropology, and neuroscience.

John Wiley & Sons  
Now in its second edition, this comprehensive textbook presents a rich overview

of approaches to educational psychology, through an in-depth exploration of both existing and emerging practice frameworks. Covering established techniques such as the Mosen et al. Problem-Solving Framework and the Constructionist Model of Informed and Reasoned Action, the book sets out new material on innovative methods and approaches such as Implementation Science and

a Problem-Solving - Solution Focussed integrated model for service delivery. Accessible summaries are accompanied by perceptive assessments of how these frameworks meet modern needs for accountable, transparent and effective practice. Providing a definitive, up-to-date view of educational psychology, the book explains the complex, integrated methodology

necessary to succeed in the field today. Thoughtful and clear, this textbook will be an invaluable resource for all practicing educational psychologists, students, trainers and educators.

## **EDUCATIONAL PSYCHOLOGY, SECOND EDITION**

John Wiley & Sons  
Learning and teaching is an integrated process, and theory and practice cannot be separated. As in the

previous Australasian edition, Educational Psychology 3e continues to emphasise the educational implications and applications of child development, cognitive science, learning and teaching. Recurring themes throughout the text include ideas about education; social and socio-cultural aspects of education; schools, families and community; development,

learning and curriculum; and effective teaching. Author Kay Margetts incorporates Australasian perspectives and applications using the work of Australasian researchers and teachers. Numerous examples, case studies, guidelines and practical tips from experienced teachers are used in the text to explore the connections between knowledge, understanding and practice.

Visualizing Psychology John Wiley & Sons Life-Span Developmental Psychology: Normative Life Crises is a compilation of papers that deals with various points of view between the academic perspective — studies in developmental psychology and applied perspective — and the practical efforts of social workers to help individual clients. Part I discusses normative life crises from

the two perspectives that include human behavior theory in social work education. This part also includes an interdisciplinary approach covering developmental, social, sociological, economic, and psychological fields. Part II covers the normative life crises in individual development such as discussions on death, ego development, and a practitioner's response on models of ego

development. The book also discusses an abstract model versus an actual individual experience in dealing with crises, as well as the meanings of adaptation and survival during old age. Part III presents the normative life crises in the family circle covering topics such as parenthood, sex roles, depression, widowhood, and an example of situational stress. Part IV deals with the normative life

crises and the social system, including socialization, life course, changing work cycles, and public policy on death. This book will prove valuable for psychologists, psychiatrists, sociologists, social workers, and behavioral scientists.
