This book of Springer Proceedings in Geoarchaeology and Archaeological Mineralogy contains selected papers presented at the 7th Geoarchaeology Conference, which took place during October 19-23, 2020, at the South Urals Federal Research Center, Ural Branch of Russian Academy of Sciences, Miass, Russia. The Proceedings combine studies in archeometry, geoarchaeology, and ancient North Eurasian technologies, including paleometallurgy, stone tools investigation, past exploitation of geological resources, bioarchaeology, residue analysis, pottery, and lithics studies. This book also specializes in various non-organic materials, rocks, minerals, ores, and metals, especially copper and metallurgical slags. Many types of research also use modern analytical methods of isotopic, chemical, and mineralogical analysis to address the composition and structure of ancient materials and the technological practices of past human populations of modern Russia, Ukraine, Turkmenistan, Tajikistan, and Mongolia. This book is intended for archaeologists, historians, museum workers, and geologists, as well as students, researchers from other disciplines, and the general public interested in the interdisciplinary research in the field of archaeology and archaeological materials, strategies and techniques of past quarrying, mining, metallurgy and lithic technologies at different chronological periods in Eurasian steppe and adjacent forest zone.

Rapid Bioassessment Protocols for Use in Streams and Wadeable Rivers Springer

Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million

people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in *Millionaire by Thirty*, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.

Surveying for Engineers East European Monographs

"Indeed, the most important part of engineering work—and also of other scientific work—is the determination of the method of attacking the problem, whatever it may be, whether an experimental investigation, or a theoretical calculation. ... It is by the

choice of a suitable method of attack, that intricate problems are reduced to simple phenomena, and then easily solved." Charles Proteus Steinmetz. The structure of this book is to provide a sequence of theory, workshops and practical field sessions that mimic a simple survey project, designed for civil and mining engineers. The format of the book is based on a number of years of experience gained in presenting the course at undergraduate and post graduate levels. The course is designed to guide engineers through survey tasks that the engineering industry feels is necessary for them to have a demonstrated competency in surveying techniques, data gathering and reduction, and report presentation. The course is not designed to make engineers become surveyors. It is designed to allow an appreciation of the civil and mine engineering surveyor's job. There are many excellent text books available on the subject of engineering surveying, but they address the surveyor, not the engineer. Hopefully this book will distil many parts of the standard text book. A lot of the material presented is scattered through very disparate sources and has been gathered into this book to show what techniques lie behind a surveyor's repertoire of observational and computational skills, and provide an understanding of the decisions made in terms of the presentation of results. The course has been designed to run over about 6 weeks of a semester, providing a half unit load which complements a computer aided design (CAD) based design project.

ELEMENTARY SURVEYING

Springer Science & Business Media
This book examines how words are

stored in the minds of Chinese speakers. It examines the mental lexicons of both native speakers of Chinese/first language (L1) users and second language (L2) learners of Chinese.

THE TURNCOAT'S WIDOW

"O'Reilly Media, Inc."

Any attempt to understand the roles that textbooks played for early modern teachers and pupils must begin with the sobering realization that the field includes many books that the German word *Lehrbuch* and its English counterpart do not call to mind. The early modern classroom was shaken by the same knowledge explosion that took place in individual scholars' libraries and museums, and transformed by the same printers, patrons and vast cultural movements that altered the larger world it served. In the fifteenth through seventeenth centuries, the urban grammar school, the German Protestant Gymnasium and the Jesuit College, all of which did so much to form the elites of early modern Europe, took shape; the curricula of old and new universities fused humanistic with scholastic methods in radically novel ways. By doing so, they claimed a new status for both the overt and the tacit knowledge that made their work possible. This collected volume presents case studies by renowned experts, among them Ann Blair, Jill Krave, Juergen Leonhardt, Barbara Mahlmann-Bauer and Nancy Siraisi.

Moving Forward University of Toronto Press

An exploration of disaster archaeology, the excavation of the aftermath of mass-fatality events that deals with urgent needs such as victim identification and scene investigation. First-hand experiences are described from the

World Trade Center, "The Station" nightclub fire in Rhode Island, and from Hurricane Katrina.

HIGH PERFORMANCE WEB SITES

De Gruyter Mouton

Want your web site to display more quickly? This book presents 14 specific rules that will cut 25% to 50% off response time when users request a page. Author Steve Souders, in his job as Chief Performance Yahoo!, collected these best practices while optimizing some of the most-visited pages on the Web. Even sites that had already been highly optimized, such as Yahoo! Search and the Yahoo! Front Page, were able to benefit from these surprisingly simple performance guidelines. The rules in High Performance Web Sites explain how you can optimize the performance of the Ajax, CSS, JavaScript, Flash, and images that you've already built into your site -- adjustments that are critical for any rich web application. Other sources of information pay a lot of attention to tuning web servers, databases, and hardware, but the bulk of display time is taken up on the browser side and by the communication between server and browser. High Performance Web Sites covers every aspect of that process. Each performance rule is supported by specific examples, and code snippets are available on the book's companion web site. The rules include how to: Make Fewer HTTP Requests Use a Content Delivery Network Add an Expires Header Gzip Components Put Stylesheets at the Top Put Scripts at the Bottom Avoid CSS Expressions Make JavaScript and CSS External Reduce DNS Lookups Minify JavaScript Avoid Redirects Remove Duplicates Scripts Configure ETags Make Ajax Cacheable If you're building pages for high traffic destinations and want to

optimize the experience of users visiting your site, this book is indispensable. "If everyone would implement just 20% of Steve's guidelines, the Web would be a dramatically better place. Between this book and Steve's YSlow extension, there's really no excuse for having a sluggish web site anymore." -Joe Hewitt, Developer of Firebug debugger and Mozilla's DOM Inspector "Steve Souders has done a fantastic job of distilling a massive, semi-arcane art down to a set of concise, actionable, pragmatic engineering steps that will change the world of web performance." -Eric Lawrence, Developer of the Fiddler Web Debugger, Microsoft Corporation
Engineer's Field Book (Classic Reprint)
Pearson Higher Ed

In December 1986, U.S. EPA's Assistant Administrator for Water initiated a major study of the Agency's surface water monitoring activities. The resulting report, entitled "Surface Water Monitoring: A Framework for Change", emphasizes the restructuring of existing monitoring programs to better address the Agency's current priorities, e.g., toxics, nonpoint source impacts, and documentation of "environmental results." The study also provides specific recommendations on effecting the necessary changes. Principal among these are: 1. To issue guidance on cost-effective approaches to problem identification and trend assessment. 2. To accelerate the development and application of promising biological monitoring techniques. In response to these recommendations, the Assessment and Watershed Protection Division developed the rapid bioassessment protocols (RBPs) designed to provide basic aquatic life data for water quality management purposes such as problem screening, site ranking, and trend

monitoring, and produced a document in 1989. Although none of the protocols were meant to provide the rigor of fully comprehensive studies, each was designed to supply pertinent, cost-effective information when applied in the appropriate context. As the technical guidance for biocriteria has been developed by EPA, states have found these protocols useful as a framework for their monitoring programs. This document was meant to have a selfcorrective process as the science advances; the implementation by state water resource agencies has contributed to refinement of the original RBPs for regional specificity. This revision reflects the advancement in bioassessment methods since 1989 and provides an updated compilation of the most cost-effective and scientifically valid approaches. The primary purpose of this document is to describe a practical technical reference for conducting cost-effective biological assessments of lotic systems. The protocols presented are not necessarily intended to replace those already in use for bioassessment nor is it intended to be used as a rigid protocol without regional modifications. Instead, they provide options for agencies or groups that wish to implement rapid biological assessment and monitoring techniques. This guidance, therefore, is intended to provide basic, cost-effective biological methods for states, tribes, and local agencies that (1) have no established bioassessment procedures, (2) are looking for alternative methodologies, or (3) may need to supplement their existing programs (not supersede other bioassessment approaches that have already been successfully implemented).

Surveying for Civil and Mine Engineers Irrigation

Bir Umm Fawakhir 3 is the last of the final reports on the archaeological surveys and excavations at the Byzantine site of Bir Umm Fawakhir in the central Eastern Desert of Egypt; it remains the only intensively studied ancient Egyptian gold-mining operation, and one of very few completely mapped towns of the era. Along with other recent excavations and surveys, it demonstrates the Byzantine empire's continuing activities in the Eastern Desert, not abandonment, as had long been believed. Four survey seasons, in 1992, 1993, 1996, and 1997, succeeded in dating the site to the fifth- and sixth-century Coptic/Byzantine period, mapping in detail the main settlement and one of the fourteen outlying settlements, and determining that it was a gold-mining operation. The goals of the 1999 excavations and the 2001 study season reported in this volume were to answer questions about the site and its occupants that surveys alone could not address, primarily the history of occupation of the site and the status of its occupants. The 1999 excavations of a sample of the houses and middens were undertaken to provide more information about the occupants and their well-being or lack thereof. Two houses, two middens, and one single-room outbuilding were excavated. Like the earlier Roman-period stone quarries in the desert, the miners seem to have worked intermittently and abandoned, or nearly so, the site between mining campaigns. The pottery study extends the corpora published with previous seasons, and the chapter on small finds discusses the wine jar docketts (dipinti), coins, jewelry, emeralds, metal, glass, and other objects. Analysis of the faunal material during the 2001 study season supports the picture of a town well

provided with meat, not only sheep and goats but also an unusual amount of beef. The volume is rounded out by an archaeobotanical study and the conservators' reports, including the construction of a barricade at the entrance to the site to help preserve it. A final chapter summarizes what can now be said about life and work at ancient Bir Umm Fawakhir.

Surveying for Engineers Oriental Inst Publications Sales

The groundwater science and engineering has been closely connected with various fields (1) Groundwater Hydrology, (2) Groundwater Hydraulics or Geohydraulics, (3) Fluid Dynamics in Porous Media, (4) Groundwater Quality Engineering, (5) Soil Physics, and (6) Hydrogeology or Geohydrology. The purpose of the book is to present an update textbook of groundwater hydraulics, which includes all of basic items in above-mentioned fields, to students (of graduate school), researchers and practitioners. The students and beginners who intend to specialize in groundwater hydraulics through one semester will master contents of the book.

Green and Smart Technology with Sensor Applications Springer Science & Business Media

This volume is the result of a conference held at Duquesne University in November 2000. The conference brought together sixty scholars, primarily historians but also specialists in other fields, as well as survivors of ethnic cleansing from seven different countries who presented forty-eight papers.

State Traffic Safety Information Springer

This updated and expanded edition of the book includes four additional chapters on earthwork on sloping sites; transitional curves and super elevation;

calculations of super elevations on composite curves; and underground mine surveying. Richly illustrated with diagrams, equations and tables as well as examples of every day survey tasks. It also covers new topics, such as the global navigation satellite system's (Real Time Kinematic-RTK), which are increasingly used in a wide range of everyday engineering applications.

Millionaire by Thirty A Revolutionary War Mystery

"The Contractor Fight" is what HGTV host and best-selling author Tom Reber calls the battle between your ears. We all have stories and experiences that have formed us into who we are. We are what we think, and the battleground is our mind. The Fight is not with the people you think are "cheap customers." It's not with the unlicensed competitors or the "illegals," as many contractors think. The Fight is with yourself. Sadly, most of the struggles contractors have are self-imposed. It's friendly fire. The negative ways we think about ourselves and our worth... friendly fire. The growing debt, working too much, small bank account... friendly fire. Winning the Fight is a choice. You're noble and full of integrity. You bend over backward to serve your family and clients. You have taken it on the chin more times than you can count. Now, it's time to get yours. Earn what you're worth. Create a business that serves you and energizes you, instead of one that beats you down. Choose to own your crap and get better today.

Surveying with Construction Applications Forgotten Books

Excerpt from Engineer's Field Book In the columns, under the head of degrees and opposite the mini utes, are given the distances in feet from the intersection of tan gents to the beginning of one degree curve. To ascertain the distance for any

given degree of curve, divide the distance given in the tables for a One degree curve, by the degrees of the required curve, and you have the distance from the point of intersection to the beginning or end of curve. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Winning the Contractor Fight

CreateSpace

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Known for its state-of-the-art coverage and clear, concise approach, *Surveying with Construction Applications, Seventh Edition* covers the latest advances and foundational principles of surveying. Emphasizing instrumentation technology, field data capture, and data-processing techniques, this text highlights real-world applications of surveying to the construction and engineering fields. Ideal as a reference in the field, additional complexities in electronic distance measurement and the order of presentation of surveying topics have been revised in this edition. All state

Departments of Transportation (DOTs) in the U.S. and the provincial Transportation/Highways Departments in Canada conduct extensive training sessions for their large staffs. This book covers topics that are taught in these training sessions, in addition to all of the introductory topics needed for survey training.

Surveying Springer Science & Business Media

There is no doubt that today, perhaps more than ever before, humanity faces a myriad of complex and demanding challenges. These include natural resource depletion and environmental degradation, food and water insecurity, energy shortages, diminishing biodiversity, increasing losses from natural disasters, and climate change with its associated potentially devastating consequences, such as rising sea levels. These human-induced and natural impacts on the environment need to be well understood in order to develop informed policies, decisions, and remedial measures to mitigate current and future negative impacts. To achieve this, continuous monitoring and management of the environment to acquire data that can be soundly and rigorously analyzed to provide information about its current state and changing patterns, and thereby allow predictions of possible future impacts, are essential. Developing pragmatic and sustainable solutions to address these and many other similar challenges requires the use of geodata and the application of geoinformatics. This book presents the concepts and applications of geoinformatics, a multidisciplinary field that has at its core different technologies that support the acquisition, analysis and visualization of geodata for environmental monitoring

and management. We depart from the 4D to the 5D data paradigm, which defines geodata accurately, consistently, rapidly and completely, in order to be useful without any restrictions in space, time or scale to represent a truly global dimension of the digital Earth. The book also features the state-of-the-art discussion of Web-GIS. The concepts and applications of geoinformatics presented in this book will be of benefit to decision-makers across a wide range of fields, including those at environmental agencies, in the emergency services, public health and epidemiology, crime mapping, environmental management agencies, tourist industry, market analysis and e-commerce, or mineral exploration, among many others. The title and subtitle of this textbook convey a distinct message. Monitoring - the passive part in the subtitle - refers to observation and data acquisition, whereas management - the active component - stands for operation and performance. The topic is our environment, which is intimately related to geoinformatics. The overall message is: all the mentioned elements do interact and must not be separated. Hans-Peter Bahr, Prof. Dr.-Ing. Dr.h.c., Karlsruhe Institute of Technology (KIT), Germany.

Inside AutoCAD BoD - Books on Demand

Irrigated agriculture is the most significant user of fresh water in the world and, due to the large area occupied, is one of the major pollution sources for the water resources. This book comprises 12 chapters that cover different issues and problematics of irrigated agriculture: from water use in different irrigated systems to pollution generated by irrigated agriculture. Moreover, the book also includes chapters that deal with new possibilities

of improving irrigation techniques through the reuse of drainage water and wastewater, helping to reduce freshwater extractions. A wide range of issues is herein presented, related to the evaluation of irrigated agriculture impacts and management practices to reduce these impacts on the environment.

Surveying for Civil and Mine

Engineers Pearson College Division
Electromagnetic distance measurement, by using light and microwaves for direct linear measurements and thus circumventing the need for traditional methods of triangulation, may well introduce a new era in surveying. This book brings together the work of forty-eight geodesists from twenty-five countries. They discuss various new EDM instruments—among them the Tellurometer, Geodimeter, and air- and satellite-borne systems—and investigate the complex sources of error. The book is therefore a unique and comprehensive source on the subject. UNESCO and R.I.C.S. have assisted financially in its production.

IRRIGATION

New Riders Pub

IrrigationBoD - Books on Demand

A Change in Thinking Business Plus

The book has evolved from the author's continuing teaching of the subject and from two editions of a text of the same title. The first edition was published in 1978 by the School of Surveying, University of New South Wales, Sydney, Australia. Like its predecessors, this totally revised third edition is designed to make the subject matter more readily available to students proceeding to degrees in Surveying and related fields. At the same time, it is a comprehensive reference book for all surveyors as well

as for other professionals and scientists who use electronic distance measurement as a measuring tool. Great emphasis is placed on the understanding of measurement principles and on proper reduction and calibration procedures. It comprises an extensive collection of essential formulae, useful tables and numerous literature references. After a review of the history of EDM instruments in Chapter 1, some fundamental laws of physics and units relevant to EDM are revised in Chapter

2. Chapter 3 discusses the principles and applications of the pulse method, the phase difference method, the Doppler technique and includes an expanded section on interferometers. The basic working principles of electro-optical and microwave distance meters are presented in Chapter 4, with special emphasis on modulation/demodulation techniques and phase measurement systems. Important properties of infrared emitting and lasing diodes are discussed.
