*Manipulation of the Spine, Thorax and Pelvis E-Book* Springer Science & Business Media

This book focuses not only on localized diseases caused by infectious diseases, trauma, tumors, and vascular lesions within the central nervous system, but also these diseases within the systems of the brain and spinal cord. Over 250 real cases with associated MRI or CTs and any pathological findings from these patients illustrate numerous disorders and fully explain the nature of the pathology.

Since The Cleveland Clinic Manual of Headache Therapy published, new guidelines and therapies have emerged. The Cleveland Clinic Manual of Headache Therapy, 2nd Edition provides these advances, as well as a number of clinical challenges not covered in the 1st edition - including headaches associated with opioids and traumatic brain injury. Organized by dedicated parts and chapters on diagnosis and treatment, this practical guide also features clinical pearls and summarizing tables. The Cleveland Clinic Manual of Headache Therapy, 2nd Edition will provide neurologists, pain specialists, fellows, residents and primary care physicians an evidence-based resource of clinical approaches and appropriate treatments.

*Pediatric Interventional Radiology* Springer Science & Business Media

In this concise, gold-standard 4th edition book, the volume editors and authors synthesize the prior three editions and provide a comprehensive and expanded review on the latest in the diagnosis and management of thyroid nodules, as well as an update on parathyroid disease and non-endocrine lesions of the neck. This user-friendly edition again emphasizes a multidisciplinary approach to thyroid ultrasound and UGFNA, offering all the new information and subtleties clinicians must know in the application of this technique, now firmly established as a primary tool for diagnosing and managing thyroid disease. Developed by renowned experts in thyroid and parathyroid disease, the book covers not only thyroid and parathyroid disease, but also imaging of the salivary glands and other non-endocrine lesions of the neck. In this edition, the authors expand the chapters on both surgical and non-surgical management. Given the increased use of molecular markers in thyroid evaluation, an excellent chapter addresses this topic. Finally, as more endocrinologists and surgeons perform ultrasounds in their office practices, a chapter on authoring ultrasound reports is now included. Combining the collective wisdom of specialists who treat patients with thyroid nodules, thyroid cancer and parathyroid disease, *Handbook of Thyroid and Parathyroid Ultrasound and Ultrasound-Guided FNA*, 4th Edition is an invaluable resource and will continue serving as the "go to" guide for surgeons, endocrinologists, fellows and residents. Foreword by Peter A. Singer, MD, Chief of Clinical Endocrinology and Director, Thyroid Diagnostic Center, Keck School of Medicine of USC, Los Angeles, CA.

*Harcourt Science: Teacher's ed., life science units A and B* Glimpses in Botany

This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants. The second edition was completely updated and expanded to take into account the substantial literature of the late twentieth century, and features a more fully developed review of the history of floristic documentation. The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies and enumerations or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions, with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras, and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations, and author and geographical indexes.

**Principles and Practice** John Wiley & Sons

This book presents research on precipitation partitioning processes in vegetated ecosystems, putting them into a global context. It describes the processes by which meteoric water comes into contact with the vegetation's canopy, typically the first surface contact of precipitation on land. It also discusses how precipitation partitioning by vegetation impacts the amount, patterning, and chemistry of water reaching the surface, as well as the amount and timing of evaporative return to the atmosphere. Although this process has been extensively studied, this is the first review of the global literature on the partitioning of precipitation by forests, shrubs, crops, grasslands and other less-studied plant types. The authors offer global contextualization combined with a detailed discussion of the impacts for the climate and terrestrial ecohydrological systems. As such, this comprehensive overview is a valuable reference tool for a wide range of specialists and students in the fields of geoscience and the environment.
