Combined, they provide a three-dimensional layout for a roadway. The alignment is the route of the road, defined as a series of horizontal tangents and curves. Geometric design of roads - Wikipedia Highway geometrics are greatly influenced by locality, traffic characteristics, topography, and requirement of design speed. The factors which govern the design requirements are

speed, user and vehicle characteristics, traffic capacity, design traffic, and benefit cost considerations. However, speed is considered to be an important factor that governs the geometric design elements of Roads. Elements of Highway Geometric Design - FirstAlert.in However, common to all classes of highways and streets are several principal elements of design, which include sight distance, superelevation, traveled way widening, grades, and horizontal and vertical alignments.
