In the current business climate the impact of the volume and nature of regulatory change and the regulatory risk arising from this is a significant business risk for regulated firms and regulators alike. As a consequence, management of this risk is increasingly high on the board agenda of regulated firms, with those business functions whose activities support this, such as Compliance, facing increasing levels of challenge in their efforts to be effective. The Changing Face of Compliance addresses core aspects of this challenge, considering the relationship between regulation and compliance and key influences on both, offering insight into the effectiveness of current approaches and addressing practical compliance challenges. Sharon Ward explains how the role of Compliance might be strengthened and those who work within it further enabled to support the current focus on improving standards in business, offering recommendations for enhancing this role. The text includes a mix of hands-on advice, examples and research based on the experiences of practitioners, educators and regulators drawn from across a wide range of jurisdictions and sectors. This is a thoughtful and timely book, whether you are concerned about the growing and changing implications of regulatory risk; the benefit of leveraging additional value from your Compliance function or your own Compliance role; or ways of transforming and sustaining the function to ensure its continued relevance to the business.

2030 Agenda for Sustainable Development will guide international development efforts over the next fifteen years. For this reason, developing a deeper understanding of the SDGs, the international norms that underpin them, and any normative change they represent is vital for students, scholars, and development practitioners and professionals. This volume is designed to provide an account of some of the normative debates and normative change that the process of developing a set of SDGs has entailed. Its goal is to assess the origins, nature, extent, and implications of normative change in the context of the post-2015 development agenda. It also

evaluates the extent to which the SDGs represent a significant change from established development norms and practices.

The ocean has absorbed a significant portion of all human-made carbon dioxide emissions. This benefits human society by moderating the rate of climate change, but also causes unprecedented changes to ocean chemistry. Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification. The long term consequences of ocean acidification are not known, but are expected to result in changes to many ecosystems and the services they provide to society. Ocean Acidification: A National Strategy to Meet the Challenges of a Changing Ocean reviews the current state of knowledge, explores gaps in understanding, and identifies several key findings. Like climate change, ocean acidification is a growing global problem that will intensify with continued CO2 emissions and has the potential to change marine ecosystems and affect benefits to society. The federal government has taken positive initial steps by developing a national ocean acidification program, but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide. In addition, a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification.

As populations have continued to grow and expand, many people have made their homes in cities around the globe. With this increase in city living, it is becoming vital to create intelligent urban environments that efficiently support this growth and simultaneously provide friendly and progressive environments to both businesses and citizens alike. Smart Cities and Smart Spaces: Concepts, Methodologies, Tools, and Applications is an innovative reference source that discusses social, economic, and environmental issues surrounding the evolution of smart cities. Highlighting a range of topics such as smart destinations, urban planning, and intelligent communities, this multi-volume book is designed for engineers, architects, facility managers, policymakers, academicians, and researchers interested in expanding their knowledge on the emerging trends and topics involving smart cities.

This book presents evidence-based research on climate-neutral and resilient farming systems and further provides innovative and practical solutions for reducing greenhouse gas emissions and mitigating the impact of climate change. Intensive farming systems are a significant source of greenhouse gas emissions, thereby contributing to global warming and the acceleration of climate change. As paddy rice farming is one of the largest contributors, and environmentally damaging farming systems, it will be a particular focus of this book. The mitigation of greenhouse gas emissions needs to be urgently addressed to achieve the 2°C target adopted by COP21 and the 2015 Paris Agreement, but this is not possible if local and national level innovations are not accompanied by international level cooperation, mutual learning and sharing of knowledge and technologies. This book, therefore, brings together international collaborative research experiences on climate-neutral and resilient farming systems compiled by leading scientists and experts from Europe, Asia and Africa. The chapters present evidence-based research and innovative solutions that can be applied or upscaled in different farming systems and regions across the world. Chapters also present models and technologies that can be used for practical implementation at the systemic level and advance the state-of-the-art knowledge on carbon-neutral farming. Combining theory and practice, this interdisciplinary book provides guidance which can inform and increase cooperation between researchers from various countries on climate-neutral and resilient farming systems. Most importantly, the volume provides recommendations which can be put into practice by those working in the agricultural industry, especially in developing countries, where they are attempting to promote climate-neutral and resilient farming systems. The book will be of great interest to students and academics of sustainable agriculture, food security, climate mitigation and sustainable development, in addition to policymakers and practitioners working in these areas. ### THE ROUTLEDGE HANDBOOK OF COMPARATIVE RURAL POLICY

Taylor & Francis

This book analyses bordering practices and their negative effects as well as the many creative and often grassroots ways in which borders are resisted and reinvented. From the hostile environment to Brexit and the Nationality and Borders Bill, the UK border regime has become increasingly strict and complex, operating both at the edge of the state and within everyday life in unprecedented ways. At the same time, this securitisation approach is often contested, and its effects are fought daily by many groups and individuals. This book explores this tension, documenting and analysing how the contemporary UK border is imagined, constructed, deconstructed, and reconstructed in multiple ways. To draw together the different pieces that compose this evolving and conflicting landscape, this book uses the concept of "borderscapes", which views borders as sites of multiple tensions between hegemonic, non-hegemonic, and counter-hegemonic imaginaries and practices. This lens enables contributors to draw a multifocal overview of the UK border that includes the different human and material actors that form it, the spaces and practices they shape, and the imaginaries and counter-imaginaries that emerge from their conflictual encounters. Bringing together contributions by researchers from a variety of disciplines, this book will be of interest to scholars and students in the fields of migration and border studies, refugee studies, human geography, criminology, sociology, and anthropology.

This book draws on experiences from a range of vocational education systems in different nation states and re-examines the purpose of providing experiences outside educational institutions; the kinds and extent of those experiences; and efforts made to ensure the integration of students'

experiences across sites. Analyses of the various vocational education systems, their purposes and practices across nations, and challenges experienced by different stakeholders illustrate different approaches to the integration of learning at different sites. The book includes a consideration of what constitutes the integration and reconciliation of experiences, and their attendant educational implications. This extends an appraisal of the concepts of integration, reconciliation, curriculum and work readiness, each of which has a range of connotations. Integration or reconciliation is differentiated from transfer of learning, which is commonly based on simple assumptions that the educational institutions will provide theory and that the workplaces will provide practice from the workplaces, and that the two can be easily linked by students. The contributions from different nation states clearly demonstrate that integration is a collaborative process and requires the agency of stakeholders operating at global, national and specific learning site levels.

As risks arising within the business environment grow in size and complexity, so too do the regulatory requirements put in place to manage them. The pace of regulatory change is itself a significant business risk, and compliance departments are under increasing pressure to keep up with the change and adapt their organisations accordingly. This new edition of what has become an indispensable guide to regulation compliance brings readers up to date with changing areas of focus and provides guidance for regulated firms and regulators alike. The Changing Function of Compliance considers the relationship between regulation and compliance as well as key influences on both, offering insight into the effectiveness of current approaches and addressing practical compliance challenges. It explains the purpose and development of regulatory risk management and the existing regulatory environment, and provides a detailed exploration of the compliance function, explaining how the role might be strengthened and how best to approach the role to enable it to be effective. This practical and accessible handbook includes a mix of hands-on advice, examples and research based on the experiences of practitioners, educators and regulators drawn from across a wide range of jurisdictions and sectors. This book is an essential read, whether you are concerned about the growing and changing implications of regulatory risk, the benefit of leveraging additional value from your compliance function or your own compliance role or ways of transforming and sustaining the function to ensure its continued relevance to the business.

### MARINE CONSERVATION AND INTERNATIONAL LAW

Taylor & Francis

This volume represents the result of almost two decades of trans-Atlantic collaborative development of a policy research paradigm, the International Comparative Rural Policy Studies program. Over this period dozens of scientists from different disciplines but with a common interest in rural issues and policy have collaboratively studied the policies in North America, Europe, and other parts of the world. A core element of the book is the idea and practice of comparative research and analysis - what can be learned from comparisons, how and why policies vary in different contexts, and what lessons might or might not be "transferable" across borders. It provides skills for the use of comparative methods as important tools to analyze the functioning of strategies and specific policy interventions in different contexts and a holistic approach for the management of resources in rural regions. It promotes innovation as a tool to valorize endogenous resources and empower local communities and offers case studies of rural policy in specific contexts. The book largely adopts a territorial approach to rural policy. This means the book is more interested in rural regions, their people and economies, and in the policies that affect them, than in rural sectors, and sectoral policies per se. The audience of the book is by definition international and includes students attending courses in agricultural and rural policy, rural and regional studies, and natural resource management; lecturers seeking course material and case studies to present to their students in any of the courses listed above; professionals working in the field of rural policy; policy-makers and civil servants at different levels seeking tools to better understand rural policy both at the local and global scale and to better recognize and comprehend how to transfer best practices.

Taylor & Francis

This book provides a comprehensive framework for analysing, comparing and promoting territorial governance in policy relevant research. It reveals in-depth considerations of the emergence, state-of-the art and evolution of the concept of territorial governance. A unique series of ten case studies across Europe, from neighbourhood planning in North Shields in the North East of England

to climate change adaptation in the Baltic Sea Region, provides far-reaching insights into a number of key elements of territorial governance. The book draws generalised empirically-based conclusions and discusses modes of transferability of 'good practices'. A number of suggestions are presented as to how the main findings from this book can inform theories of territorial governance and spatial policy and planning. Territorial Governance across Europe will be of considerable interest to scholars around the world who are concerned with European studies, regional policy, urban and regional planning, and human and political geography. It provides a solid debate on discourses, theories, concepts and methods around the notion of territorial governance as well as a number of empirical findings from various contexts across Europe. It specifically targets scholars involved in policy-relevant research.

Continuing advances in science and technology offer the promise of providing tools to meet global challenges in health, agriculture, the environment, and economic development; some of the benefits are already being realized. However, such advances have the potential to challenge the oversight systems for responsible conduct of life sciences research with dual use potential "research that may have beneficial applications but that also could be misused to cause harm. Between June 10 and 13, 2018, more than 70 participants from 30 different countries and 5 international organizations took part in an international workshop, The Governance of Dual Use Research in the Life Sciences: Advancing Global Consensus on Research Oversight, to promote global dialogue and increased common understandings of the essential elements of governance for such research. Hosted by the Croatian Academy of Sciences and Arts in Zagreb, Croatia, the workshop was a collaboration among the InterAcademy Partnership, the Croatian Academy, the Croatian Society for Biosafety and Biosecurity, and the U.S. National Academies of Sciences, Engineering, and Medicine. This publication summarizes the presentations and discussions from the workshop.

There has been much attention paid to the idea of Smart Cities as researchers have sought to define and characterize the main aspects of the concept, including the role of creative industries in urban growth, the importance of social capital in urban development, and the role of urban sustainability. This book develops a critical view of the Smart City concept, the incentives and role of governments in promoting the development of Smart Cities and the analysis of experiences of e-government projects addressed to enhance Smart Cities. This book further analyzes the perceptions of stakeholders, such as public managers or politicians, regarding the incentives and role of governments in Smart Cities and the critical analysis of e-government projects to promote Smart Cities' development, making the book valuable to academics, researchers, policy-makers, public managers, international organizations and technical experts in understanding the role of government to enhance Smart Cities' projects.

This book offers various soil and water treatment technologies due to increasing global soil and water pollution. In many countries, the management of contaminated land has matured, and it is developing in many others. Topics covered include chemical and ecological risk assessment of contaminated sites; phytomanagement of contaminants; arsenic removal; selection and technology diffusion; technologies and socio-environmental management; post-remediation long-term management; soil and groundwater laws and regulations; and trace element regulation limits in soil. Future prospects of soil and groundwater remediation are critically discussed in this book. Hence, readers will learn to understand the future prospects of soil and groundwater contaminants and remediation measures. Key Features: Discusses conventional and novel aspects of soil and groundwater remediation technologies Includes new monitoring/sensing technologies for soil and groundwater pollution Features a case study of remediation of contaminated sites in the old, industrial, Ruhr area in Germany Highlights soil washing, soil flushing, and stabilization/solidification Presents information on emerging contaminants that exhibit new challenges This book is designed for undergraduate and graduate courses and can be used as a handbook for researchers, policy makers, and local governmental institutes. Soil and Groundwater Remediation Technologies: A Practical Guide is written by a team of leading global experts in the

field.

Tourism consumers are increasingly demanding and seek to base their travel decision-making process on relevant and credible tourism information. In recent years, user-generated content on social media, the opinion of travel bloggers, and entertainment programs in the media have influenced the public's travel purchasing behavior and acted as a driving force for the development of tourism products, such as film tourism. It also has played a role in the evolution and development of marketing, giving rise to new applications, as in the case of digital and influence

marketing. On the other hand, tourism organizations and destination management organizations face major challenges in communicating the attributes of a tourism product, since this cannot be experienced before consumption. Thus, they need to know how and in which means or platforms of communication they can inform potential consumers. *Impact of New Media in Tourism* provides theoretical and practical contributions in tourism and communication including current research on the influence of new media and the active role of consumers in tourism. With a focus on decision making and increasing the visibility of products and destinations, the book provides support for tourism agencies and organizations around the world. Covering themes that include digital marketing, social media, and online branding, this book is essential for professionals, academicians, researchers, and students working or studying in the field of tourism and hospitality management, marketing, advertising, and media and communications.

The imperative that all students, including English learners (ELs), achieve high academic standards and have opportunities to participate in science, technology, engineering, and mathematics (STEM) learning has become even more urgent and complex given shifts in science and mathematics standards. As a group, these students are underrepresented in STEM fields in college and in the workforce at a time when the demand for workers and professionals in STEM fields is unmet and increasing. However, English learners bring a wealth of resources to STEM learning, including knowledge and interest in STEM-related content that is born out of their experiences in their homes and communities, home languages, variation in discourse practices, and, in some cases, experiences with schooling in other countries. *English Learners in STEM Subjects: Transforming Classrooms, Schools, and Lives* examines the research on ELs' learning, teaching, and assessment in STEM subjects and provides guidance on how to improve learning outcomes in STEM for these students. This report considers the complex social and academic use of language delineated in the new mathematics and science standards, the diversity of the population of ELs, and the integration of English as a second language instruction with core instructional programs in STEM.
