Cambridge
University
Press

The most up-to-date and contextualised offering for comparative law students and scholars, referencing the newest research in the field.

*Why Am I
Afraid to
Love?*

Cambridge
University
Press

Drawing on philosophy, the history of psychology and the natural sciences, this

book proposes a new theoretical foundation for the psychology of the life course. It features the study of unique individual life courses in their social and cultural environment, combining the perspectives of developmental and sociocultural psychology, psychotherapy, learning sciences and gerontopsychology. In particular, the book highlights semiotic

processes, specific to human development, that allow us to draw upon past experiences, to choose among alternatives and to plan our futures. Imagination is an important outcome of semiotic processes and enables us to deal with daily constraints and transitions, and promotes the transformation of social representation and symbolic systems - giving each person a

unique style, or 'melody', of living. The book concludes by questioning the methodology and epistemology of current life course studies.

Mathematics and the Body

Cambridge University Press
Intellectual styles are individuals' preferred ways of using the abilities that they possess. The extent to which one can change his or her intellectual

style is a question of interest to both researchers and the general public. This book presents the first comprehensive and systematic review of existing research on the malleability of intellectual styles. By critically analyzing research findings derived from both cross-sectional and longitudinal investigations performed over the past seven

decades, Li-fang Zhang demonstrates that intellectual styles can be modified through both socialization and purposeful training. Professor Zhang elucidates the heuristic value of these findings for the development of adaptive intellectual styles in both academic and non-academic settings. She proposes further avenues of research that might advance

scholarly understanding of the nature of and the potential for modifying intellectual styles. Cambridge University Press
A comprehensive anthology of the classical historians-- from the early Greeks through the late Romans, right up to the beginnings of the Christian era.

Human Development in the Life Course

Zondervan
The latest in a series exploring

twenty-first-century governance, this new volume examines the use of market means to pursue public goals. ^oMarket-based governance; [±] includes both the delegation of traditionally governmental functions to private players, and the importation into government of market-style management approaches and mechanisms of accountability. The

contributors (all from Harvard University) assess market-based governance from four perspectives: The ^odemand side; [±] deals with new, revised, or newly important forms of interaction between government and the market where the public sector is the ^ocustomer. [±] Chapters in this section include Steve Kelman on federal procurement reform, Karen Eggleston and

Richard Zeckhauser on contracting for health care, and Peter Frumkin. The *supply side* section deals with unsettled questions about government's role as a provider (rather than a purchaser) within the market system. Contributors include Georges de Menil, Frederick Schauer and Virginia Wise. A third section explores experiments with market-based arrangements for orchestrating accountability outside government by altering the incentives that operate inside market institutions. Chapters include Robert Stavins on market-based environmental policy, Archon Fung on *social markets*, and Cary Coglianese and David Lazer. The final section examines both the upside and the downside of the market-based approach to improving governance. Contributors include Elaine Kamarck, John D. Donahue, Mark Moore, and Robert Behn. An introduction by John D. Donahue frames market-based governance as an effort to engineer into public work some of the *intensive* accountability that characterizes markets without surrendering the *extensive* accountability of conventional government. A

preface by Joseph S. Nye Jr. sets the book in the context of a larger inquiry into the future of governance.

Supply Side, Demand Side, Upside, and

Downside

Cambridge University Press
Based on original research, this book explores the fundamental relationship between research and practice in English language teaching. Teacher Research in

Language Teaching uses empirical evidence taken from an international survey of over 1,700 teachers and educational managers, over a period of six years. It examines their views of research, whether they read ELT research, and whether they do their own research. The author goes on to explore the process which teachers go through in learning to do research, and the research cultures within

teaching institutions. The book concludes with a review of the key findings to emerge from the research and a discussion of strategies through which language teacher research engagement can be promoted more productively.

A CRITICAL ANALYSIS

Cambridge University Press
Ever since the Industrial Revolution debate has raged about

the sources of the new, sustained western prosperity. Margaret Jacob here argues persuasively for the critical importance of knowledge in Europe's economic transformation during the period from 1750 to 1850, first in Britain and then in selected parts of northern and western Europe. This is a new history of economic development in which minds, books, lectures and education become

central. She shows how, armed with knowledge and know-how and inspired by the desire to get rich, entrepreneurs emerged within an industrial culture wedded to scientific knowledge and technology. She charts how, across a series of industries and nations, innovative engineers and entrepreneurs sought to make sense and a profit out of the world around them. Skilled

hands matched minds steeped in the knowledge systems new to the eighteenth century to transform the economic destiny of western Europe. Complexity Science Cambridge University Press "Compiles a variety of lessons learned by field researchers, many of whom have faced demanding situations characterized by violence, profound and

well-grounded distrust, and social fragmentation "--

An Entrepreneurial Approach
Cambridge University Press

This book deals with the kinds of everyday questions working teachers face as they plan lessons and courses. Each chapter contains an analysis of the issue under discussion, as well as practical principles and sample activities.

Dewey,

Herbert and Education as Transformation
Cambridge University Press

The article-based thesis is becoming increasingly common, especially in the 'hard' sciences such as biology, medicine and technology, and is beginning to replace the traditional monograph. Format guidelines vary among universities. This is the first book to summarise the main features, showing the

PhD student how to prepare a thesis in such a format. The suggestions are highly practical; both its good and bad examples from published theses support the author's wise advice on all aspects of such theses. Poor figures are not only scrutinised in detail but also redrawn for comparison. Guidance also covers the issues of reprint permissions and copyright. This informative

and accessible book, from the author of *How to Write and Illustrate a Scientific Paper*, has been developed through the author's extensive teaching experience in scientific writing and also his experience as a journal editor. It is therefore an indispensable guide to article-based thesis success.

Complexity
science is the
study of

systems with
many
interdependen
t components.
Such systems
- and the self-
organization
and emergent
phenomena
they manifest
- lie at the
heart of many
challenges of
global
importance.
This book is a
coherent
introduction to
the
mathematical
methods used
to understand
complexity,
with plenty of
examples and
real-world
applications. It
starts with the
crucial
concepts of
self-
organization

and emergence, then tackles complexity in dynamical systems using differential equations and chaos theory. Several classes of models of interacting particle systems are studied with techniques from stochastic analysis, followed by a treatment of the statistical mechanics of complex systems. Further topics include numerical analysis of PDEs, and applications of

stochastic methods in economics and finance. The book concludes with introductions to space-time phases and selfish routing. The exposition is suitable for researchers, practitioners and students in complexity science and related fields at advanced undergraduate level and above. *Theory and Practice of Corporate Governance* Cambridge University Press Teaching and Learning in

the 21st Century: Embracing the Fourth Industrial Revolution explores responsive and innovative pedagogies arising from findings of research and practitioner experiences, globally. This book clarifies concepts and issues that surround teaching and learning for the 21st century. *New Theories in Context* Cambridge University Press Market-Based Governance Supply Side,

Demand Side, Upside, and DownsideBrookings Institution Press
Teacher Research in Language Teaching
 Cambridge University Press

Bullying is a socially and culturally complex phenomenon that until now has largely been understood in the context of the individual. This book challenges the dominance of this approach, examining the processes of extreme exclusion that are enacted in bullying - whether at school, through face-to-face meetings or virtual encounters - in the context of group dynamics. Contributors draw upon qualitative empirical studies, mixed methods and statistics, to analyse the elements that allow bullying to emerge - the processes that produce exclusion and contempt, and the relations between children, teachers and parents.

Introducing a new definition of bullying, this book goes on to discuss directions for future research and action, including more informed intervention strategies and re-thinking methods of prevention. Exploring bullying in the light of the latest research from a wide variety of disciplines, this book paves the way for a new paradigm through which to understand the field.

ORACLE 11G: SQL is not simply a study guide; it is written for individuals who have just a basic knowledge of databases and can be utilized in a course on this latest implementation of SQL from Oracle.

Melodies of Living Law in Context
This collection examines the many internal and external factors affecting cognitive processes.
Editor Shulamith Kreitler brings together a wide range of international contributors to produce an outstanding assessment of recent research in the field. These contributions go beyond the standard approach of examining the effects of motivation

and emotion to consider the contextual factors that may influence cognition. These broad and varied factors include personality, genetics, mental health, biological evolution, culture, and social context. By contextualizing cognition, this volume draws out the practical applications of theoretical cognitive research while bringing separate areas of scholarship into meaningful dialogue.
