A Conservation

Assessment of the
Terrestrial Ecoregions
of Latin America and
the Caribbean Burns &
Oates

This book is open
access under a CC BY

4.0 license. This book brings together a range of ideas and theories to arrive at a deeper understanding of inequality in Latin America and its complex realities. To do so, it addresses questions such as: What are the origins of inequality in Latin America? How can we create societies that are more equal in terms of income distribution, gender equality and opportunities? How can we remedy the social divide that is making Latin America one of the most unequal regions on earth? What are the roles played by market forces, institutions and ideology in terms of inequality? In this book, a group of global experts gathered by the Institute for the

Integration of Latin America and the Caribbean (INTAL), part of the Inter-American Development Bank (IDB), show readers how various types of inequality, such as economical, educational, racial and gender inequality have been practiced in countries like Brazil, Bolivia, Chile, Mexico and many others through the centuries. Presenting new ideas, new evidence, and new methods, the book subsequently analyzes how to move forward with second-generation reforms that lay the foundations for more egalitarian societies. As such, it offers a valuable and insightful guide for development economists, historians and Latin American specialists alike, as well as students,

educators, policymakers and all citizens with an interest in development, inequality and the Latin American region.

Advances in Soft

Computing Springer

This book constitutes the thoroughly refereed proceedings of the 8th International Congress on Telematics and Computing, WITCOM 2019, held in Merida, Mexico, in November 2019. The 31 full papers presented in this volume were carefully reviewed and selected from 78 submissions. The papers are organized in topical sections: GIS & climate change; telematics & electronics; artificial intelligence & machine learning; software engineering &

education; internet of things; and informatics security.

Economic

Opportunities and

Challenges of the

Demographic

Transition Cambridge University Press

This book provides the first comprehensive overview of saline and alkaline soils in Latin America, known for having one of the most extensive surface of salt-affected soils in the world. It is organized along two main axes: soils and vegetation. The book discusses the occurrence of such soils in the region, focusing mainly in management strategies for their sustainable use, and it presents accounts of natural vegetation and crops in the various environments of the

region. Social impacts of such conditions and ongoing projects to overcome them are considered. Likewise, the book highlights physiological mechanisms that are responsible for the negative effects these soils exert on crops and forest resources and determine vegetation distribution in them. Plant breeding challenges and new perspectives for such environments are discussed.

Technologies such as irrigation and drainage are included. The readership includes soil and plant scientists, as well as policy makers.

Looking Over the Long Run

United Nations
4% of Latin America and the Caribbean's GDP comes from the extractive sector. This

figure is equivalent to the amount generated by agriculture in the same region. An effective engagement between governments, companies, and civil society is required to propel sustainable development. With this regional diagnosis of countries rich in natural resources like Argentina, Chile, Colombia, Mexico, Peru, and the Dominican Republic, the IDB seeks to shed light on best practices among stakeholders of the extractive sectors. It focuses in actions of information, dialogues, consultations, collaborations, and partnerships that are driving development in the region. From the findings of the diagnosis, 3 roadmaps were drafted, to guide the stakeholders in

strengthening their engagement.

BIOREMEDIATION AND BIOTECHNOLOGY

Springer

Toxic substances threatens aquatic and terrestrial ecosystems and ultimately human health. The book is a thoughtful effort in bringing forth the role of biotechnology for bioremediation and restoration of the ecosystems degraded by toxic and heavy metal pollution. The introductory chapters of the book deal with the understanding of the issues concerned with the pollution caused by toxic elements and heavy metals and their impacts on the different ecosystems followed by the techniques involved in

monitoring of the pollution. These techniques include use of bio-indicators as well as modern techniques for the assessment and monitoring of toxicants in the environment.

Detailed chapters discussing the role of microbial biota, aquatic plants, terrestrial plants to enhance the accumulation efficiency of these toxic and heavy metals are followed by remediation techniques involving myco-remediation, bio-pesticides, bio-fertilizers, phyto-remediation and rhizo-filtration. A sizable portion of the book has been dedicated to the advanced bio-remediation techniques which are finding their way from the laboratory to the field for revival of the

degraded ecosystems. These involve bio-films, micro-algae, genetically modified plants and filter feeders. Furthermore, the book is a detailed comprehensive account for the treatment technologies from unsustainable to sustainable. We believe academicians, researchers and students will find this book informative as a complete reference for biotechnological intervention for sustainable treatment of pollution.

TRANSPORTATION AND AIR QUALITY

Lippincott Williams & Wilkins

The population of Uruguay is undergoing a slow but sustained aging process, driven by the demographic transition that started

early in the twentieth century. While this reflects significant improvements in mortality and fertility trends, it also creates important challenges for the fiscal sustainability of some social policies and the economic trends in the medium and long term. Uruguay is currently going through the “demographic bond† stage of this process, as the proportion of the population aged between 15 and 65 years old is peaking. This temporary situation creates the possibility of increasing the endowment of capital and labor force and entering a path of sustained economic growth. For this to happen, it is necessary to generate institutional, financial and fiscal conditions

that promote larger savings and investment, to increase the productivity of the economy and sustain per capita GDP growth. This book studies the opportunities and challenges that the demographic transition poses for Uruguay's economy. Once the demographic bond has passed, population aging will have a significant impact on fiscal accounts, especially in social protection expenditures. This represent a serious policy challenge, demanding reforms to adapt the institutions and systems to a new demographic context. The main challenge for Uruguay in the next few decades will be to maintain a solid economic growth path in the context of a

diminishing working-age population. This will require that labor force participation rates increase, particularly among women and older citizen, but also that those in the labor market increase their productivity. This will be achieved only through sustained growth of capital per worker ratio and the incorporation of innovations and technological developments that facilitate increased production of goods and services for the entire population.

EMPIRES, NATIONS, AND NATIVES

University Press of
Colorado
The process of
demographic transition
through which
Argentina is passing is

a window of both opportunities and challenges in economic and social terms. Argentina is still a young country in which the working-age population represents the largest proportion of its total population. Currently, the country just began a 30-year period with the most advantageous age structure of its population, which could favor greater economic growth. This situation, known as the 'demographic window of opportunity,' will last until the beginning of the 2040s. The dynamics of the fertility and mortality rates signify a gradual ageing of the population, with implications for various dimensions of the economy, the social protection system,

public policies, and society in general. This book studies the opportunities and challenges that the demographic transition poses for the Argentine economy, its most important social sectors like the healthcare, education, and social protection systems, and the potential fiscal trade-offs that must be dealt with. The study shows that even though Argentina is moving through its demographic transition, it just recently began to enjoy the window of opportunity and this constitutes a great opportunity to achieve an accumulation of capital and future economic growth. Once the window of opportunity has passed, population

ageing will have a significant impact on the level of expenditure, especially spending in the social protection system. This signifies a challenge from a fiscal policy point of view, because if long-term reforms are not undertaken to mediate these effects, the demographic transition will put pressure on the reallocation of fiscal resources among social sectors. Finally, population ageing poses concerns related to sustaining the rate of economic growth with a smaller working-age population. Taking advantage of the current window of opportunities, increasing savings that will finance the accumulation of capital, and increasing future labor force

productivity in this way is a challenge for the Argentine economy. *Natural Resources, Management and Productive Alternatives* Springer
Empires, Nations, and Natives is a groundbreaking comparative analysis of the interplay between the practice of anthropology and the politics of empires and nation-states in the colonial and postcolonial worlds. It brings together essays that demonstrate how the production of social-science knowledge about the “other” has been inextricably linked to the crafting of government policies. Subverting established boundaries between national and imperial anthropologies, the contributors explore

the role of anthropology in the shifting categorizations of race in southern Africa, the identification of Indians in Brazil, the implementation of development plans in Africa and Latin America, the construction of Mexican and Portuguese nationalism, the genesis of “national character” studies in the United States during World War II, the modernizing efforts of the French colonial administration in Africa, and postcolonial architecture. The contributors—social and cultural anthropologists from the Americas and Europe—report on both historical and contemporary processes. Moving

beyond controversies that cast the relationship between scholarship and politics in binary terms of complicity or autonomy, they bring into focus a dynamic process in which states, anthropological knowledge, and population groups themselves are mutually constructed. Such a reflexive endeavor is an essential contribution to a critical anthropological understanding of a changing world. Contributors: Alban Bensa, Marcio Goldman, Adam Kuper, Benoît de L’Estoile, Claudio Lomnitz, David Mills, Federico Neiburg, João Pacheco de Oliveira, Jorge Pantaleón, Omar Ribeiro Thomaz, Lygia Sigaud, Antonio Carlos

de Souza Lima,

Wage Inequality in Latin America UNESCO Publishing
 Literacy remains a contentious and polarized educational, media and political issue. What has emerged from the continuing debate is a recognition that literacy in education is allied closely with matters of language and culture, ideology and discourse, knowledge and power. Drawing perspectives variously from critical social theory and cultural studies, poststructuralism and feminisms, sociolinguistics and the ethnography of communication, social history and comparative education, the contributors begin a critical interrogation

of taken-for-granted assumptions which have guided educational policy, research and practice.
The Role of Sound Groundwater Resources Management and Governance to Achieve Water Security
 UNEP/Earthprint
 This publication assesses progress towards Sustainable Development Goal 4 (SDG 4) on education and its ten targets, as well as other related education targets in the SDG agenda. It addresses inclusion in education, drawing attention to all those excluded from education, because of background or ability. The report is motivated by the explicit reference to inclusion in the 2015 Incheon Declaration, and the

call to ensure an inclusive and equitable quality education in the formulation of SDG 4, the global goal for education. It reminds us that, no matter what argument may be built to the contrary, we have a moral imperative to ensure every child has a right to an appropriate education of high quality.

A Wildlife Management Institute Book In this lavishly illustrated volume Richard E. McCabe, Bart W. O'Gara and Henry M. Reeves explore the fascinating relationship of pronghorn with people in early America, from prehistoric evidence through the Battle of Little Bighorn in 1876. The only one of fourteen pronghorn-like genera to survive the great extinction brought on by human migration into North America, the pronghorn has a long and unique history of interaction with humans on the continent, a history that until now has largely remained unwritten. With nearly 150 black-and-white photographs, 16 pages

of color illustrations, plus original artwork by Daniel P. Metz, *Prairie Ghost: Pronghorn and Human Interaction in Early America* tells the intriguing story of humans and these elusive big game mammals in an informative and entertaining fashion that will appeal to historians, biologists, sportsmen and the general reader alike.

The two-volume set LNAI 12468 and 12469 constitutes the proceedings of the 19th Mexican International Conference on Artificial Intelligence, MICAI 2020, held in Mexico

City, Mexico, in October 2020. The total of 77 papers presented in these two volumes was carefully reviewed and selected from 186 submissions. The contributions are organized in topical as follows: Part I: machine and deep learning, evolutionary and metaheuristic algorithms, and soft computing. Part II: natural language processing, image processing and pattern recognition, and intelligent applications and robotics.

Inclusion and Education - All Means All Springer

With contributions from 35 leading economists, this forward-looking book explores the future of development economics against the background of the past half-century of

development thought and practice. Outstanding representatives of the past two generations of development economists assess development thinking at the turn of the century and look to the unsettled questions confronting the next generation. The volume offers a thorough analysis of the broad range of issues involved in development economics, and it is especially timely in its critique of what is needed in development theory and policy to reduce poverty. An overriding issue is whether in the future 'development economics' is to be regarded simply as applied economics or whether the nature and scope of

development economics will constitute a need for a special development theory to supplement general economic theory. 'Frontiers of Development Economics' is an ideal reference for all those working in the international development community.

The Basin of Mexico

Springer Nature

"The book examines some of these questions in a historic perspective, arguing that the depletion of natural resources in the Basin of Mexico is not just a recent phenomenon."--BOOK JACKET.

Silvopastoral Systems in Southern South

America Cambridge University Press

Critical Medical

Anthropology presents

inspiring work from scholars doing and engaging with ethnographic research in or from Latin America, addressing themes that are central to contemporary Critical Medical Anthropology (CMA). This includes issues of inequality, embodiment of history, indigeneity, non-communicable diseases, gendered violence, migration, substance abuse, reproductive politics and judicialisation, as these relate to health. The collection of ethnographically informed research, including original theoretical contributions, reconsiders the broader relevance of CMA perspectives for addressing current global healthcare

challenges from and of Latin America. It includes work spanning four countries in Latin America (Mexico, Brazil, Guatemala and Peru) as well as the trans-migratory contexts they connect and are defined by. By drawing on diverse social practices, it addresses challenges of central relevance to medical anthropology and global health, including reproduction and maternal health, sex work, rare and chronic diseases, the pharmaceutical industry and questions of agency, political economy, identity, ethnicity, and human rights.

Namibia Business
Intelligence Report -

Practical Information, Opportunities, Contacts Inter-American Development Bank Social inclusion is on the agenda of governments, policymakers, and nonstate actors around the world. Underpinning this concern is the realization that despite progress on poverty reduction, some people continue to feel left out. This report aims to unpack the concept of social inclusion and understand better how policies can be designed to further inclusion. First, the report offers a definition of social inclusion as the "process of improving the terms for individuals and groups to take part in society." It unpacks different domains of society that

excluded groups and individuals are at particular risk of being left out of -- markets, services, and spaces. Second, the report discusses the most important global megatrends such as migration, climate change, and aging of societies, which will impact challenges and opportunities for inclusion. Finally, it argues that despite these challenges, change towards inclusion is possible and offers examples of inclusionary policies.

ECOSYSTEM AND CULTURAL SERVICES

Springer Nature Examines the increasing recognition that the environment is a subject for protection in constitutional texts and for vindication by constitutional courts.

8th International Congress, WITCOM 2019, Merida, Mexico, November 4-8, 2019, Proceedings World Bank Publications

The ways in which Internet traffic is managed have direct consequences on Internet users' rights as well as on their capability to compete on a level playing field. Network neutrality mandates to treat Internet traffic in a non-discriminatory fashion in order to maximise end users' freedom and safeguard an open Internet. This book is the result of a collective work aimed

at providing deeper insight into what is network neutrality, how does it relates to human rights and free competition and how to properly frame this key issue through sustainable policies and regulations. The Net Neutrality Compendium stems from three years of discussions nurtured by the members of the Dynamic Coalition on Network Neutrality (DCNN), an open and multi-stakeholder group, established under the aegis of the United Nations Internet Governance Forum (IGF).
