Measurement is the transformation of drawn information into descriptions and quantities, undertaken to value, cost, and price construction work, as well as enabling effective management. It is not just about a quantity surveyor producing a bill of quantities for contractors to price during tendering. Measurement - Designing Buildings Wiki Accuracy can be one of the most important aspects to ensuring that a construction project runs smoothly. This is especially true when it comes to measurements, as an inexact figure can negatively affect the entire process. Precise readings, therefore, could save huge amounts of time, labour and money for people in the building trade. The Importance of Accurate Measurements in Construction ... Measurement contracts (sometimes called 're-measurement' or 'measure and value' contracts) can be used in situations where the design (or type of works) can be described in reasonable detail, but the amount cannot. For example, excavation works where the quantity of excavation required is difficult to assess until after the works have begun, or refurbishment projects where there are some uncertainties about the works that will be required. Measurement contract - Designing Buildings Wiki Measured term contract. Measured term contracts (such as JCT MTC 2011) are used where the client has a regular programme of works that they would like to be undertaken by a single contractor. They are generally used for minor works or for maintenance work. The contract will generally define the buildings that will be covered by the works, the term over which

works may be required (usually between one and three years), an estimate of the likely total value of the works that will be required ... Measured term contract - Designing Buildings Wiki Difference between lump sum and measurement contracts. Lump sum and measurement are both types construction contracts. Under a lump sum contract, a single 'lump sum' price for all the works is agreed before the works begin. It is defined as a fixed price contract, where the contractors agree to execute the work for a stated total sum of money. Lump sum contracts are generally appropriate where the project is well defined when tenders are sought and significant changes to requirements ... Difference between lump sum and measurement contracts ... As this style of building requires a dedicated apprenticeship, people should not necessarily view it as a "how-to" book, even though it does explain the process in fine detail. There is excellent coverage of measurement, and I especially like the detailed section on tatami layout. The wealth of floor plans alone justify the purchase.
