This publication assesses the impact of

COVID-19 on e-commerce and digital trade. While the pandemic caused a sharp deceleration in economic activity, it also led to a rapid acceleration of e-commerce. With restrictions on movement and other public health interventions in place, digital solutions have become essential to continued delivery of economic and social activities. And, as the digital economy and e-commerce play an increased role in Sustainable Development, stakeholders at all levels have a responsibility to ensure that these technologies play a positive and powerful role in national and international recovery efforts. Indeed, those that can harness the potential of e-commerce will be better placed to benefit from global markets for their

goods and services, while those that fail to do so risk falling behind. Thus, the critical global policy challenge that emerges from this study is that greater efforts are needed to help reduce inequalities in e-trade readiness that currently prevail amongst countries.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's

book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

THE #1 SUNDAY TIMES BESTSELLER A riveting, deeply personal account of history in the making-from the president

who inspired us to believe in the power of democracy - and the perfect gift this Christmas! 'Gorgeously written, humorous, compelling, life affirming' Justin Webb, Mail on Sunday In the stirring, highly anticipated first volume of his presidential memoirs, Barack Obama tells the story of his improbable odyssey from young man searching for his identity to leader of the free world, describing in strikingly personal detail both his political education and the landmark moments of the first term of his historic presidency-a time of dramatic transformation and turmoil. Obama takes readers on a compelling journey from his earliest political aspirations to the pivotal Iowa caucus victory that demonstrated the power of grassroots activism to the watershed

night of November 4, 2008, when he was elected 44th president of the United States, becoming the first African American to hold the nation's highest office. Reflecting on the presidency, he offers a unique and thoughtful exploration of both the awesome reach and the limits of presidential power, as well as singular insights into the dynamics of U.S. partisan politics and international diplomacy. Obama brings readers inside the Oval Office and the White House Situation Room, and to Moscow, Cairo, Beijing, and points beyond. We are privy to his thoughts as he assembles his cabinet, wrestles with a global financial crisis, takes the measure of Vladimir Putin, overcomes seemingly insurmountable odds to secure passage of the Affordable Care

Act, clashes with generals about U.S. strategy in Afghanistan, tackles Wall Street reform, responds to the devastating Deepwater Horizon blowout, and authorizes Operation Neptune's Spear, which leads to the death of Osama bin Laden. *A Promised Land* is extraordinarily intimate and introspective—the story of one man's bet with history, the faith of a community organizer tested on the world stage. Obama is candid about the balancing act of running for office as a Black American, bearing the expectations of a generation buoyed by messages of "hope and change," and meeting the moral challenges of high-stakes decision-making. He is frank about the forces that opposed him at home and abroad, open about how living in the White House

affected his wife and daughters, and unafraid to reveal self-doubt and disappointment. Yet he never wavers from his belief that inside the great, ongoing American experiment, progress is always possible. This beautifully written and powerful book captures Barack Obama's conviction that democracy is not a gift from on high but something founded on empathy and common understanding and built together, day by day. 'What is unexpected in *A Promised Land* is the former president's candour' David Olusoga, *Observer*

Questo volume vuol essere un manuale per tutti coloro che, per lavoro o solo per curiosità, vogliono saperne di più sulla tv digitale terrestre. Soprattutto, vogliono

capire perché riscontrano problemi nella ricezione e, magari, conoscere il modo per risolverli. Un manuale che vuole diffondere la cultura della “dtt”, tecnologia ancora giovane e per questo ancora poco nota, mentre l’ormai estinta tv analogica poteva avvalersi di oltre cinquant’anni di “onorato servizio”, durante i quali le soluzioni, i trucchetti, i vizi e le virtù si erano tramandati e diffusi largamente.

In lively, mordantly witty prose, Negroponte decodes the mysteries--and debunks the hype--surrounding bandwidth, multimedia, virtual reality, and the Internet, and explains why such touted innovations as the fax and the CD-ROM are likely to go the way of the BetaMax. "Succinct and readable. . . . If you suffer from digital anxiety . . . here is a book that lays it all out for you."--

The dominant model of democratic politics emphasizes reason at the expense of the passions. Passions have been treated as dangerous, the opposite of reason and the enemy of virtue. Paul Ginsborg and Sergio Labate challenge this model and put forward a very different view, developing an account of modern democratic politics in which both passions and reason play a crucial role. To do justice to the role of passions in politics, we must pay close attention to the way in which they circulate among us; then we must develop a suitable language to describe them – an ‘alphabet of the passions’ that enables us to understand how they combine with

one another and connect with certain states of mind in order to shape political outcomes. Adopting this approach enables the authors to shed new light on one of the major phenomena of our time – the triumph of neoliberalism on a world scale. Neoliberalism has worked so well because it has incorporated its own romantic and individualist version of the passions into its worldview, seducing both individuals and families with the allure of consumption. By developing a new model of democratic politics based on the interplay of passions and reason, Ginsborg and Labate provide a much needed framework for understanding the crucial role that passions play in the unfolding of political life. At a time when populist leaders are on the ascendancy and political processes are shaped as

much by anger, resentment and fear as they are by reason and argument, this refocusing of political analysis on the role of the passions could not be more timely.

The production and distribution of film and audiovisual works is one of the most dynamic growth sectors in the world. Thanks to digital technologies, production has been growing rapidly in Africa in recent years. For the first time, a complete mapping of the film and audiovisual industry in 54 States of the African continent is available, including quantitative and qualitative data and an analysis of their strengths and weaknesses at the continental and

regional levels. The report proposes strategic recommendations for the development of the film and audiovisual sectors in Africa and invites policymakers, professional organizations, firms, filmmakers and artists to implement them in a concerted manner. *Future Telco* Springer Science & Business Media

This book examines the extensive changes in markets, technologies and value chains that telecommunication companies are currently confronted with. It analyzes the crossroads they have reached and the choices that now need to be made – to be a bit pipe or a trendsetter of digitalization. Based on an analysis of the key challenges for telcos, the book derives future market scenarios and puts forward recommendations for

how they can successfully position themselves. It proposes a framework based on seven “levers,” which addresses concrete measures in each step of the value chain, ranging from technology, IT and processes, to innovation, marketing and sales issues. The book discusses the current challenges and provides both general recommendations and concrete solutions. Respected experts illustrate innovative strategic and technical trends and provide insights gained in real-life transformation projects. Recent developments in the areas of regulation, product development, competition between over-the-top (OTT) providers and telcos, as well as technical innovations like 5G, SDN/NFV, LEO satellites and MEC are discussed.

Accordingly, practitioners, managers and researchers alike will benefit from the book’s wealth of examples and up-to-date insights.

The Guerrilla Girls' Bedside Companion to the History of Western Art Elsevier

The main question of our age is how we live our lives. As we struggle with this question, we face others. How do we handle ideas and knowledge, both our own and those of others? What relationship to ideas do we want? Whose ideas do we want to be surrounded by? Where do we want to think? Most choose, or have the choice made for them, according to what family, colleagues, and friends do and say and what we read about, and a more or less rational calculation of the odds. Modern

ecology results from the shift in thinking generated by quantum physics and systems theory, from the old view based on reductionism, mechanics, and fixed quantities to a new view based on holistic systems where qualities are contingent on the observer and on each other. This perception changes how people treat ideas and facts, certainties and uncertainties, and affects both art and science. Worldwide it is part of the process of understanding the current crisis in the environment, and the balance of economy, creativity, and control required in our response. The book's starting point is the growing role that information has played in industrial economies since the 1800s and especially in the last thirty years. It is an attempt to identify ecology of thinking

and learning. It is also based on the need to escape from old, industrial ways and become more attuned to how people actually borrow, develop, and share ideas. Throughout the book, Howkins asks questions and offers signposts. He gives no guarantee that creative ecologies will be sustainable, but shows what should be aimed for.

Rapidly evolving computer and communications technologies have achieved data transmission rates and data storage capacities high enough for digital video. But video involves much more than just pushing bits! Achieving the best possible image quality, accurate color, and smooth motion requires understanding many aspects of image acquisition, coding, processing, and

display that are outside the usual realm of computer graphics. At the same time, video system designers are facing new demands to interface with film and computer system that require techniques outside conventional video engineering. Charles Poynton's 1996 book *A Technical Introduction to Digital Video* became an industry favorite for its succinct, accurate, and accessible treatment of standard definition television (SDTV). In *Digital Video and HDTV*, Poynton augments that book with coverage of high definition television (HDTV) and compression systems. For more information on HDTV Retail markets, go to:

Nel 2009, nessun italiano in classifica, per esempio tra le 50 figure che hanno plasmato il decennio o i 100 libri dell'anno. Zero titoli. A costruirci un'immagine di simpatici ma inetti cafoni non sono solo antichi stereotipi, ma anche fatti e comportamenti reali. Tanto per cominciare il maggior debito pubblico dell'Ue, 1821,9 miliardi di euro. Ma anche tasse tra le più alte (siamo quinti, ma dietro i Paesi scandinavi che il denaro pubblico lo sanno usare molto meglio), la giustizia più lenta, infrastrutture inefficienti e costosissime. In tutta Italia ci sono 230 chilometri di rete metropolitana; nella sola Londra, 408. Per un contenzioso su un assegno a vuoto impieghiamo 645 giorni; in Olanda, 39. Per avviare un'impresa ci

vogliono circa 5000 euro e 62 giorni di scartoffie; in Usa, 170 dollari e 4 giorni. Nell'indice di libertà economica strutturato dal «Wall Street Journal» siamo al 74° posto, dietro al Botswana. E negli ultimi dieci anni la qualità della nostra vita è peggiorata: la bolletta del gas è aumentata del 50 per cento, quella della luce del 70, mentre i nostri stipendi rimangono tra i più bassi del continente e i nostri pensionati sono i più tassati. Per forza esportiamo più giovani professionisti di chiunque altro, un esodo di cervelli da quasi due miliardi di dollari. Giovanni Floris illustra con dati, inchieste, aneddoti e notizie quello che nessuno ha il coraggio di dirci: quanto siamo caduti in basso, e come è successo. Rivela come ci vedono davvero gli altri Paesi e quanti

investimenti mancati ci costa questa immagine. Indaga casi eclatanti di corruzione, inefficienza, spreco. Chiede conto a una politica che non rimuove gli ostacoli alla crescita e ha smesso di fare il nostro interesse. Perché ormai, per l'Italia, navigare in zona retrocessione non è più solo imbarazzante. Può essere fatale.

This book arose out of original research on the extension of well-established applications of complex numbers related to Euclidean geometry and to the space-time symmetry of two-dimensional Special Relativity. The system of hyperbolic numbers is extensively studied, and a plain exposition of space-time geometry and trigonometry is given. Commutative hypercomplex systems with four unities are studied and

attention is drawn to their interesting properties.
