 Bipolar neurons are also the functional units of the vestibular system, which plays an important role in maintaining our balance. This vestibular system that is made of vestibular receptors, nerves, and ganglion, are also present in the inner ear and convey sensory data to the brain, which contributes in maintaining upright posture and coordinating head and eye movement.

[Bipolar coordinates - Wikipedia](#)

Polarity in international relations is any of the various ways in which power is distributed within the international system. It describes the nature of the international system at any given period of time. One generally distinguishes three types of systems: unipolarity, bipolarity, and multipolarity for three or more centers of power. The type of system is completely dependent on the ...

Bipolar or multipolar coordinates offer useful insights and advantages over Cartesian coordinates in certain geometrical problems. In bipolar coordinates  $(r_1, r_2)$  the “simplest” curves are the conics, ovals of Cassini, Cartesian ovals, and their special cases, which are characterized by linear or hyperbolic relations in the  $(r_1, r_2)$

The most common definition of bipolar coordinates  $(\sigma, \tau)$  is.

where the  $\sigma$ -coordinate of a point P equals the angle  $F_1 P F_2$  and the  $\tau$ -coordinate equals the natural logarithm of the ratio of the distances  $d_1$  and  $d_2$  to the foci. (Recall that  $F_1$  and  $F_2$  are located at  $(-a, 0)$  and  $(a, 0)$ , respectively.) Equivalently.
